Chemistry

International Advanced Level

Unit 5: Transition Metals and Organic Nitrogen Chemistry

Candidates must have: Scientific calculator
Data Booklet

Total Marks

Instructions

- Use **black** ink or **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*

Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- For the question marked with an asterisk (*), marks will be awarded for your ability to structure your answer logically showing the points that you make are related or follow on from each other where appropriate.
- A Periodic Table is printed on the back cover of this paper.

Advice

- Read each question carefully before you start to answer it.
- Show your working in calculations and include units where appropriate.
- Check your answers if you have time at the end.

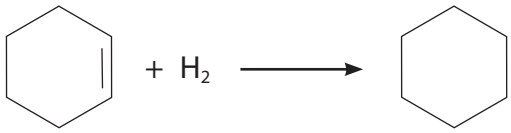
Pearson

SECTION A

Answer ALL the questions in this section. You should aim to spend no more than 20 minutes on this section. For each question, select one answer from A to D and put a cross in the box ☒. If you change your mind, put a line through the box ☒ and then mark your new answer with a cross ☒.

1 The enthalpy change of hydrogenation of cyclohexene is −120 kJ mol^{-1}.



What is the approximate enthalpy change of hydrogenation of benzene, in kJ mol^{-1}?

☒ **A** −150

☒ **B** −210

☒ **C** −360

☒ **D** −510

(Total for Question 1 = 1 mark)

2 Which orbitals overlap to form the ring of delocalised electrons in benzene and what type of bond is formed?

	Orbitals overlapping	Type of bond
☒ **A**	p	π
☒ **B**	p	σ
☒ **C**	s and p	π
☒ **D**	s and p	σ

(Total for Question 2 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

3 Which reagent and catalyst will convert benzene into phenylethanone?

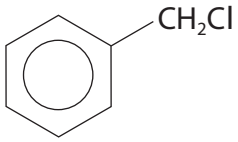
	Reagent	Catalyst
☒ **A**	ethanal	aluminium chloride
☒ **B**	ethanal	platinum
☒ **C**	ethanoyl chloride	aluminium chloride
☒ **D**	ethanoyl chloride	platinum

(Total for Question 3 = 1 mark)

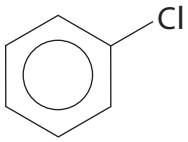
4 Chlorine reacts with methylbenzene in the presence of ultraviolet light.

Which of these is a product of this reaction?

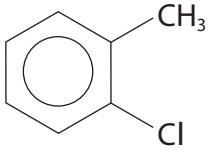
☒ **A**



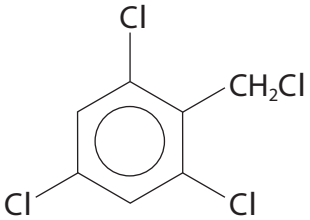
☒ **B**



☒ **C**



☒ **D**



(Total for Question 4 = 1 mark)

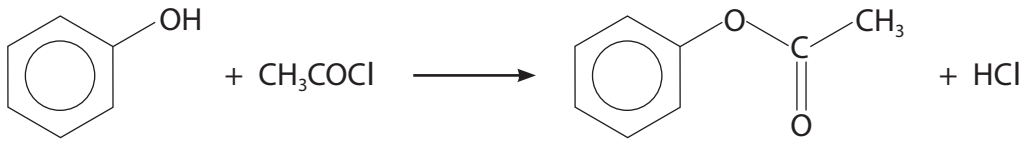
Use this space for any rough working. Anything you write in this space will gain no credit.

5 How many isomers containing a benzene ring are there with the molecular formula $C_6H_3(NO_2)_2OH$?

- ☒ **A** 4
- ☒ **B** 5
- ☒ **C** 6
- ☒ **D** 7

(Total for Question 5 = 1 mark)

6 Phenol reacts with ethanoyl chloride to form phenyl ethanoate.



phenol — $M_r = 94$

phenyl ethanoate — $M_r = 136$

In an experiment, 3.67 g of phenyl ethanoate was formed, giving a yield of 85.0 %.

What was the starting mass of phenol?

- ☒ **A** 2.16 g
- ☒ **B** 2.54 g
- ☒ **C** 2.98 g
- ☒ **D** 4.51 g

(Total for Question 6 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

7 A hydrocarbon contains 91.3 % by mass of carbon.

Which of these could be the molecular formula of this compound?

- ☒ **A** C_6H_6
- ☒ **B** C_7H_8
- ☒ **C** C_8H_{10}
- ☒ **D** C_9H_{12}

(Total for Question 7 = 1 mark)

8 What is an organic product of the reaction between ethylamine and chloroethane?

- ☒ **A** NH_2CH_2COCl
- ☒ **B** $C_2H_5NH_4^+Cl^-$
- ☒ **C** $C_2H_5NHCOC_2H_5$
- ☒ **D** $(C_2H_5)_2NH_2^+Cl^-$

(Total for Question 8 = 1 mark)

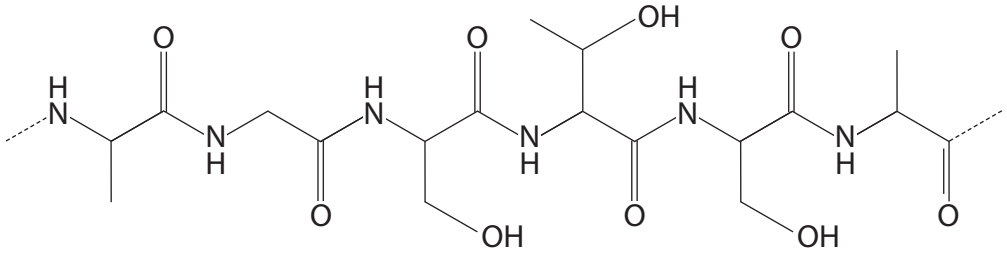
9 Which pair of monomers can form this polymer?

	Monomer 1	Monomer 2
☒ **A**	HOC_6H_4OH	$HOOCCH_2CH_2COOH$
☒ **B**	$HOCH_2C_6H_4CH_2OH$	$HOOCCH_2CH_2COOH$
☒ **C**	$HOCH_2C_6H_4COOH$	$HOCH_2CH_2COOH$
☒ **D**	$HOOCC_6H_4COOH$	$HOCH_2CH_2OH$

(Total for Question 9 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

10 Part of the structure of a protein is shown.



How many **different** amino acids were used to form this part of the structure?

- ☒ **A** 3
- ☒ **B** 4
- ☒ **C** 5
- ☒ **D** 6

(Total for Question 10 = 1 mark)

11 Which organic compound reacts with a Grignard reagent to give a product that forms a secondary alcohol on hydrolysis?

- ☒ **A** carbon dioxide
- ☒ **B** ethanal
- ☒ **C** methanal
- ☒ **D** propanone

(Total for Question 11 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

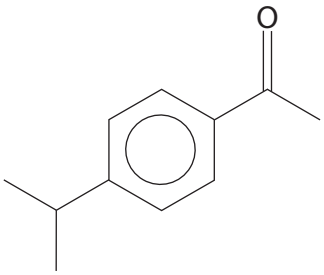
12 A compound with the formula C_6H_{14} gives a ^{13}C NMR spectrum with four peaks.

Which compound gives this spectrum?

☒ **A** 

☒ **B** 
☒ **C** 
☒ **D** 
(Total for Question 12 = 1 mark)

13 Cuminone is used as a flavouring.



cuminone

What is the molecular formula of cuminone?

☒ **A** $C_{10}H_{13}O$

☒ **B** $C_{10}H_{15}O$

☒ **C** $C_{11}H_{14}O$

☒ **D** $C_{11}H_{16}O$

(Total for Question 13 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

14 Which species contains an element with the same oxidation number as bromine in $KBrO_3$?

- ☒ **A** N_2O_5
- ☒ **B** $KMnO_4$
- ☒ **C** K_2FeO_4
- ☒ **D** Na_2SO_3

(Total for Question 14 = 1 mark)

15 Which is a redox reaction?

- ☒ **A** $Cr_2O_7^{2-} + 2C \rightarrow Cr_2O_3 + CO_3^{2-} + CO$
- ☒ **B** $CrO_2Cl_2 + 4OH^- \rightarrow CrO_4^{2-} + 2Cl^- + 2H_2O$
- ☒ **C** $Cr_2O_7^{2-} + 2HCl \rightarrow 2CrO_3Cl^- + H_2O$
- ☒ **D** $2CrO_4^{2-} + 2H^+ \rightarrow Cr_2O_7^{2-} + H_2O$

(Total for Question 15 = 1 mark)

16 The electronic configuration of the atoms of an element is $1s^2 2s^2 2p^6 3s^2 3p^6 3d^5 4s^1$.

What is the maximum oxidation number shown in compounds of this element?

- ☒ **A** +1
- ☒ **B** +5
- ☒ **C** +6
- ☒ **D** +7

(Total for Question 16 = 1 mark)

17 Which of the following species will **not** act as a ligand in the formation of a complex ion?

- ☒ **A** CH_3NH_2
- ☒ **B** CN^-
- ☒ **C** NH_3
- ☒ **D** NH_4^+

(Total for Question 17 = 1 mark)

18 What is the coordination number of the nickel(II) ion and the overall charge, m, of this complex?

	Coordination number of nickel(II) ion	Overall charge, m, of this complex
☒ **A**	2	0
☒ **B**	2	4–
☒ **C**	6	0
☒ **D**	6	4–

(Total for Question 18 = 1 mark)

19 In acidic conditions, manganate(VII) ions are reduced to manganese(II) ions, Mn^{2+}.

In neutral conditions, manganate(VII) ions are reduced to manganese(IV) oxide, MnO_2.

22.0 cm^3 of a solution of manganate(VII) ions were needed to oxidise 25.0 cm^3 of a solution of iron(II) ions to iron(III) ions in **acidic** conditions.

The same solution of manganate(VII) ions is used to oxidise 25.0 cm^3 of the same solution of iron(II) ions in **neutral** conditions.

By considering the oxidation number changes involved, it may be shown that the volume of the manganate(VII) solution required, in neutral conditions, is

☒ **A** 12.6 cm^3

☒ **B** 13.2 cm^3

☒ **C** 36.7 cm^3

☒ **D** 38.5 cm^3

(Total for Question 19 = 1 mark)

20 A solution contains 19.6 g dm^{-3} of chromium(III) sulfate, $Cr_2(SO_4)_3$.

What is the concentration, in mol dm^{-3}, of sulfate ions in this solution?

[Molar mass $Cr_2(SO_4)_3 = 392$ g mol^{-1}]

- ☒ **A** 0.05
- ☒ **B** 0.10
- ☒ **C** 0.15
- ☒ **D** 0.25

(Total for Question 20 = 1 mark)

TOTAL FOR SECTION A = 20 MARKS

SECTION B

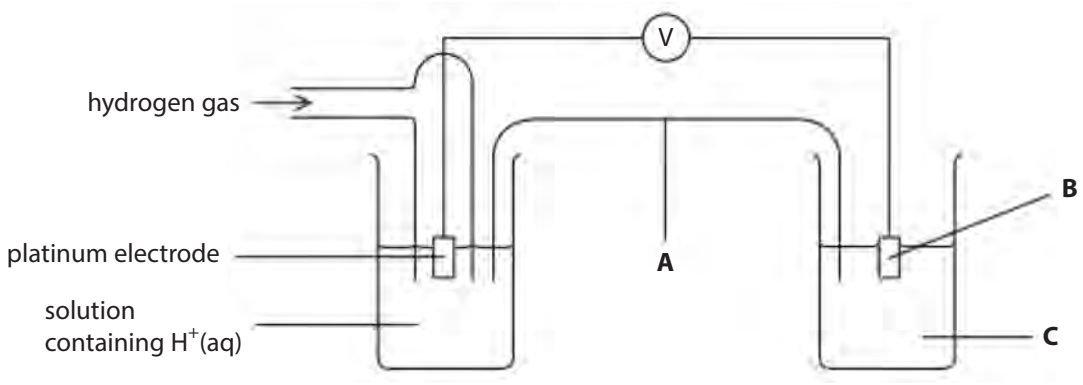
Answer ALL the questions. Write your answers in the spaces provided.

21 This question is about electrochemical cells.

(a) The half-equation for an iron(III) / iron(II) half-cell is

$$Fe^{3+}(aq) + e^- \rightleftharpoons Fe^{2+}(aq)$$

The standard electrode potential of this half-cell is measured using the apparatus shown.



The measurement is made under standard conditions.

Identify, by name or formula, the substances needed in the salt bridge and in the right-hand half-cell to measure the standard electrode potential.

(3)

A Salt bridge containing a solution of

.....

B Electrode made of

.....

C Solution containing

.....

(b) The cell diagram for an electrochemical cell is

$Pt \mid [Mn^{2+} + 4H_2O], [MnO_4^- + 8H^+] \,\|\, [BiO_3^- + 6H^+], [Bi^{3+} + 3H_2O] \mid Pt \quad E^{\ominus}_{cell} = +0.09\ V$

Write the half-equations for the two half-cells and hence the overall ionic equation for the reaction that occurs.

State symbols are not required.

(3)

(c) The standard electrode potential, $E^{\ominus}$, for the chromium(III) / chromium half-cell is –0.74 V.

$$Cr^{3+}(aq) + 3e^- \rightleftharpoons Cr(s)$$

The effect on the electrode potential, *E*, of changing the concentration of the ions in the half cell is calculated using the equation

$$E = E^{\ominus} + \frac{RT}{96\,500 \times n} \ln[Cr^{3+}(aq)]$$

where n is the number of electrons in the half-equation, *T* is the temperature in kelvin and *R* is the gas constant.

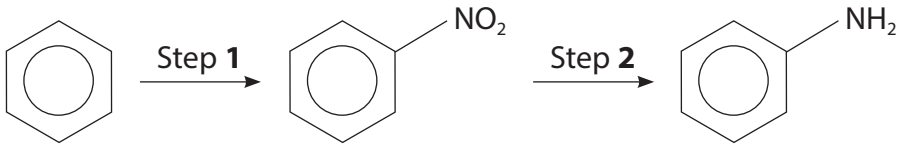
Calculate the electrode potential of the half-cell at 298 K when the concentration of chromium(III) ions is 0.0100 mol dm^{-3}.

(2)

(Total for Question 21 = 8 marks)

22 This question is about aromatic amines and amino acids.

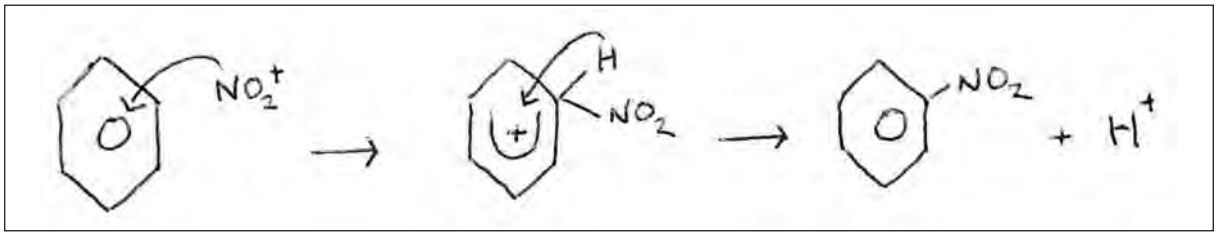
(a) A synthesis of phenylamine is shown.



nitrobenzene phenylamine

(i) Benzene is converted into nitrobenzene in Step **1** using a mixture of concentrated nitric acid and concentrated sulfuric acid. The electrophile is NO_2^+.

A student drew a mechanism for the reaction.



Describe the three changes needed to correct this student's mechanism.

(3)

Change 1 .....

.....

.....

Change 2 .....

.....

.....

Change 3 .....

.....

.....

(ii) Give the reagents for Step **2**.

(1)

.....

.....

(b) Phenylamine is a base.

(i) Explain why phenylamine is a weaker base than ammonia.

(3)

.....

.....

.....

.....

.....

.....

.....

.....

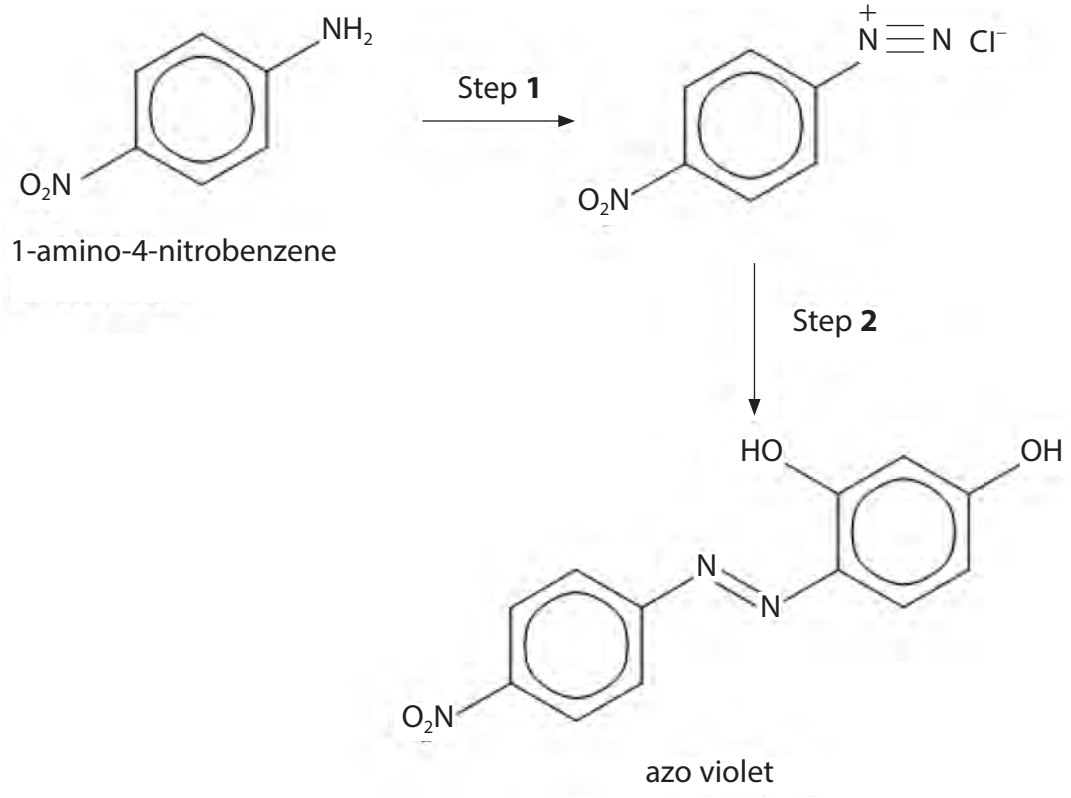
(ii) State what is **seen** when a few drops of an aqueous solution of phenylamine are added to an aqueous solution containing Cu^{2+} ions.

(1)

.....

.....

(c) Azo violet is used as a dye and an indicator.
A synthesis of azo violet from 1-amino-4-nitrobenzene is shown.



(i) Give the reagents and condition for Step **1**.

(2)

.....

.....

(ii) Deduce the structure of the organic compound needed to produce azo violet in Step **2**.

(1)

(iii) Give a reason why azo violet exists as geometric isomers.

(1)

.....

.....

.....

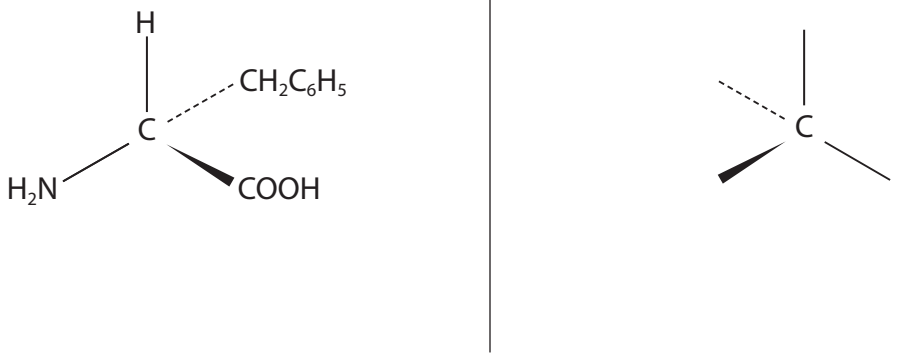
.....

(d) Phenylalanine is an amino acid that exists as optical isomers.

The structure of one of the optical isomers is shown.

Complete the diagram to show the other optical isomer of phenylalanine.

(1)



(Total for Question 22 = 13 marks)

23 This question is about some organic compounds.

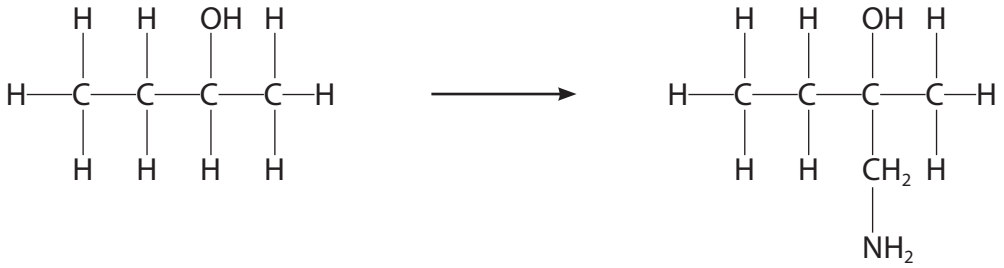
(a) A mixture of methane and ethane with a total volume of 25.0 cm^3 required 65.0 cm^3 of oxygen for complete combustion.

All gas volumes were measured at the same temperature and pressure.

Determine the percentage, by volume, of methane in the mixture.

(4)

(b) Devise a reaction scheme to convert butan-2-ol into 1-amino-2-methylbutan-2-ol in **three** steps.



1-amino-2-methylbutan-2-ol

Include the reagents, conditions and equations for each of the steps.

For any oxidation or reduction use [O] and [H] respectively.

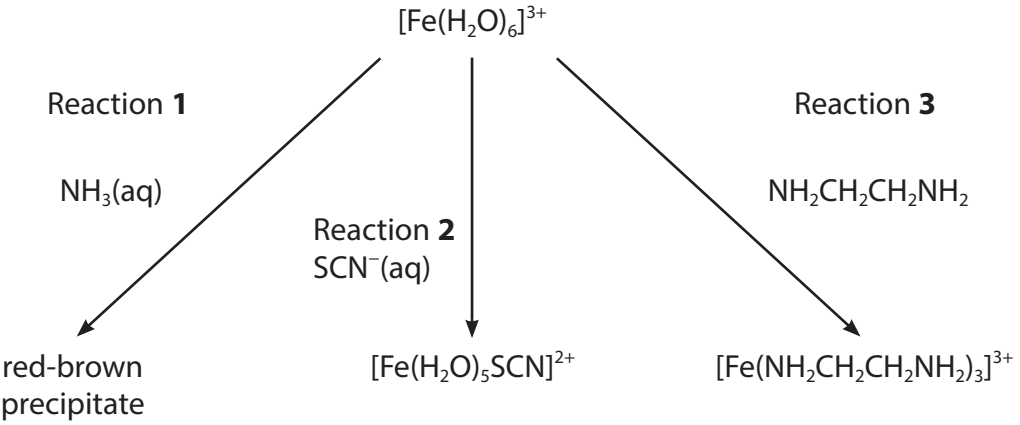
(6)

(Total for Question 23 = 10 marks)

BLANK PAGE

24 This question is about transition metals and their compounds.

(a) Three reactions were carried out on a solution containing $[Fe(H_2O)_6]^{3+}$ ions.



(i) Complete the equation for Reaction **1**. State symbols are not required.

(2)

$[Fe(H_2O)_6]^{3+}$ + ... NH_3 →

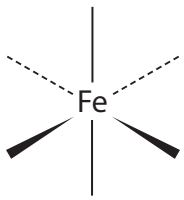
(ii) State the type of reaction occurring in Reaction **2**.

(1)

.....

(iii) Complete the diagram to show the structure of the complex ion formed in Reaction **3**, showing **all** of the atoms.

(2)



(b) Vanadium can exist in the oxidation states +2, +3, +4 and +5.

(i) Complete the table to show the colours of the ions that each of these oxidation states has in aqueous solution.

(2)

Oxidation state of vanadium	Colour of the ions in aqueous solution
+2	mauve
+3	
+4	
+5	

(ii) Two vanadium species exist in equilibrium in an aqueous solution.

$$VO_3^-(aq) + H_2O(l) \rightleftharpoons VO_2^+(aq) + 2OH^-(aq)$$

Deduce whether or not this is a redox reaction.

Justify your answer in terms of oxidation numbers.

(1)

.....

.....

.....

.....

(iii) Predict the oxidising agent that could convert vanadium(II) ions to vanadium(III) ions and then vanadium(IV) ions, but **not** to vanadium(V) ions, under standard conditions.

Only use data from the tables shown.

Include equations and $E^{\ominus}_{cell}$ values for the two reactions that occur.

(5)

Vanadium systems

Electrode system	$E^{\ominus}$ / V
$V^{3+}(aq) + e^- \rightleftharpoons V^{2+}(aq)$	–0.26
$VO^{2+}(aq) + 2H^+(aq) + e^- \rightleftharpoons V^{3+}(aq) + H_2O(l)$	+0.34
$VO_2^+(aq) + 2H^+(aq) + e^- \rightleftharpoons VO^{2+}(aq) + H_2O(l)$	+1.00

Oxidising agents

Electrode system	$E^{\ominus}$ / V
$Cu^{2+}(aq) + e^- \rightleftharpoons Cu^+(aq)$	+0.15
$NO_3^-(aq) + 2H^+(aq) + e^- \rightleftharpoons NO_2(g) + H_2O(l)$	+0.80
$\frac{1}{2}Br_2(aq) + e^- \rightleftharpoons Br^-(aq)$	+1.09

*(c) Transition metals, their compounds and their ions can act as heterogeneous and homogeneous catalysts.

Compare and contrast these two types of catalytic behaviour.

Include one specific example from transition metal chemistry of each of these types of catalyst and a reaction in which it is used.

(6)

(Total for Question 24 = 19 marks)

TOTAL FOR SECTION B = 50 MARKS

SECTION C

Answer ALL the questions.

Write your answers in the spaces provided.

25

The Lanthanides

The lanthanides form a series in the Periodic Table comprising the elements from lanthanum, La ($Z = 57$) to lutetium, Lu ($Z = 71$). They have important uses as elements and compounds, for example, in the screens, circuits and speakers of smartphones. These elements have some similar properties to d-block elements.

Many of the lanthanide elements are obtained by heating their trichlorides or trifluorides with calcium at 1000°C.

These elements form part of the f-block of the Periodic Table as the last electron added enters an f-orbital. There are seven f-orbitals in the f-subshell.

The electronic configurations of the atoms consist of the electronic configuration of xenon followed by electrons in the 4f and 6s orbitals and sometimes the 5d orbitals. For example:

samarium, Sm	$[Xe]4f^6 6s^2$
europium, Eu	$[Xe]4f^7 6s^2$
gadolinium, Gd	$[Xe]4f^7 5d^1 6s^2$
terbium, Tb	$[Xe]4f^9 6s^2$

All of the lanthanides form ions with a charge of 3+ and the ionic radii of these ions decrease as the atomic number of the element increases.

The lanthanides form complex ions, for example, $[Ce(H_2O)_9]^{3+}$ and $[Yb(H_2O)_8]^{3+}$.

Many of the complex ions formed from the elements in the lanthanide series are coloured and this colour is caused by f–f transitions.

Cerium(IV) ammonium nitrate is yellow in aqueous solution and gives a red colour with **all** alcohols.

Cerium(IV) ammonium sulfate is used in redox titrations with ferroin as the indicator. The colour change is red to yellow.

Use your knowledge of d-block elements to help you to answer the questions.

(a) Write the equation for the reduction of holmium(III) fluoride, HoF_3, by calcium. State symbols are not required.

(1)

(b) The electronic configuration of xenon is $1s^2 2s^2 2p^6 3s^2 3p^6 3d^{10} 4s^2 4p^6 4d^{10} 5s^2 5p^6$.

(i) Suggest a reason why gadolinium has the electronic configuration $[Xe]4f^7 5d^1 6s^2$ rather than $[Xe]4f^8 6s^2$.

(1)

(ii) Complete the electronic configuration of Sm^{3+}.

(1)

[Xe] .....

(c) (i) Explain why the ionic radius of a thulium ion, Tm^{3+}, is less than that of a cerium ion, Ce^{3+}.

Tm^{3+} 0.095 nm

Ce^{3+} 0.111 nm

(2)

(ii) Suggest a reason why the complex ions of the lanthanides can contain more ligands than those of the transition metals.

(1)

.....

.....

.....

(d) Explain why solutions containing $[La(H_2O)_9]^{3+}$ are colourless.

(2)

.....

.....

.....

.....

.....

.....

(e) Hydrated cerium(IV) ammonium nitrate contains Ce^{4+}, NH_4^+ and NO_3^- ions and some water of crystallisation.

(i) Hydrated cerium(IV) ammonium nitrate contains 23.97 % cerium, 19.18 % nitrogen, 2.05 % hydrogen and 54.80 % oxygen by mass.

Calculate the empirical formula of this compound and hence write the overall formula showing the cerium, ammonium and nitrate ions and the water of crystallisation.

(3)

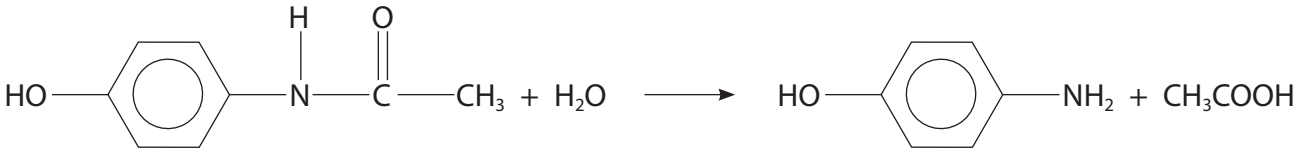
(ii) An organic compound, **X**, with the molecular formula $C_7H_{16}O$ did not react with acidified potassium dichromate(VI) solution but gave a red colour with cerium(IV) ammonium nitrate solution. **X** exists as a pair of optical isomers.

Deduce a possible structure of **X**. Justify your answer.

(4)

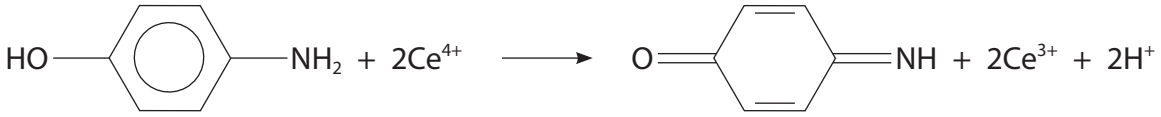
(f) The amount of paracetamol in a tablet can be determined using a titration with cerium(IV) ions.

The tablets are crushed and then hydrolysed in acid to form 4-aminophenol.



paracetamol 4-aminophenol

4-aminophenol is oxidised by cerium(IV) ions.



Outline procedure

- Two tablets containing paracetamol were crushed and 0.800 g of the powder was added to dilute sulfuric acid.
- The mixture was heated under reflux until the hydrolysis was complete.
- The solution was made up to 100.0 cm^3 in a volumetric flask.
- 25.0 cm^3 portions of the solution were titrated against acidified 0.100 mol dm^{-3} Ce^{4+} using ferroin the indicator.

Result

The mean titre was 21.70 cm^3.

Calculate the percentage by mass of paracetamol in the tablets.
Give your answer to an appropriate number of significant figures.
