IAL Chemistry (WCH02/01)
Unit 2: Application of Core Principles of Chemistry

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information, please visit our website at www.edexcel.com.

Our website subject pages hold useful resources, support material and live feeds from our subject advisors giving you access to a portal of information. If you have any subject specific questions about this specification that require the help of a subject specialist, you may find our Ask the Expert email service helpful.

## Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.
- Mark schemes will indicate within the table where, and which strands of QWC, are being assessed. The strands are as follows:
i) ensure that text is legible and that spelling, punctuation and grammar are accurate so that meaning is clear
ii) select and use a form and style of writing appropriate to purpose and to complex subject matter
iii) organise information clearly and coherently, using specialist vocabulary when appropriate

## Using the Mark Scheme

Examiners should look for qualities to reward rather than faults to penalise. This does NOT mean giving credit for incorrect or inadequate answers, but it does mean allowing candidates to be rewarded for answers showing correct application of principles and knowledge. Examiners should therefore read carefully and consider every response: even if it is not what is expected it may be worthy of credit.

The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.
/ means that the responses are alternatives and either answer should receive full credit.
( ) means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer.
Phrases/ words in bold indicate that the meaning of the phrase or the actual word is essential to the answer.
ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

## Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to: - write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear

- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.
Full marks will be awarded if the candidate has demonstrated the above abilities.
Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

| :--- | :--- | :--- | :---: |
| $\mathbf{2 2 ( e ) ( i v )}$ | (provides the) activation energy/ (provides <br> the) energy for the reaction to occur/heat for <br> the reaction to occur/ overcome the energy <br> barrier <br> Allow this to be written on the diagram | Decreases $\mathrm{E}_{\mathrm{a}}$ <br> Just 'to initiate <br> reaction' <br> Acts as a catalyst | ( |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 2 ( e ) ( v )}$ | (Chemically) changed by the reaction/ <br> (it is) changed into MgO/ <br> Used up (by the reaction) | Just 'it reacts' <br> Provides alternative <br> routes or pathway. <br> Does not speed up the <br> reaction <br> Just 'it takes part in <br> the reaction'. | Allow doesn't lower activation energy |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 2 ( e ) ( v i )}$ | (Once reaction is started it provides) <br> enough energy to be self-sustaining/ <br> energy only needed at the start as the <br> reaction is exothermic | Chain Reaction <br> Just 'highly <br> exothermic reaction' | $\mathbf{1}$ |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 2 ( f )}$ | It may ignite at any time/delay in the <br> reaction/molten metal may be ejected | Just ‘explosion' <br> Flammable/ fire | $\mathbf{1}$ |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 2 ( g )}$ | The iron is melted/molten/liquid (and <br> joins the two pieces of metal/railway <br> line) | Melt Aluminium <br> Just 'melt the metal' <br> Just 'melt the railway <br> lines' |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 2 ( h )}$ | Aluminium is readily <br> available/abundant/cheap/easy to <br> handle/easy to store/ $\mathrm{Al}_{2} \mathrm{O}_{3}$ has a low <br> density so floats (and avoids <br> contaminating the weld) | Al does not corrode |  |
| OR | Reverse argument/other metals may <br> not react and release enough heat (to <br> melt the iron)/other metals are difficult <br> to store | Other metals are too <br> exothermic. |  |
