## Pearson Edexcel

Mark Scheme (Results)

## Summer 2018

Pearson Edexcel International Advanced Level in Chemistry (WCH02) Paper 01 Application Of Core Principles Of Chemistry

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

## Using the Mark Scheme

Examiners should look for qualities to reward rather than faults to penalise. This does NOT mean giving credit for incorrect or inadequate answers, but it does mean allowing candidates to be rewarded for answers showing correct application of principles and knowledge. Examiners should therefore read carefully and consider every response: even if it is not what is expected it may be worthy of credit.

The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.
/ means that the responses are alternatives and either answer should receive full credit.
( ) means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer.
Phrases/words in bold indicate that the meaning of the phrase or the actual word is essential to the answer.
ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

## Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

- write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.
Full marks will be awarded if the candidate has demonstrated the above abilities.
Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

## Section A

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1}$ | The only correct answer is A | (1) |
|  | B is not correct because $\mathrm{NH}_{3}$ is trigonal pyramidal |  |
| C is not correct because $\mathrm{H}_{3} \mathrm{O}^{+}$is trigonal pyramidal |  |  |
| D is not correct because $\mathrm{PCl}_{3}$ is trigonal pyramidal |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{2}$ | The only correct answer is D | (1) |
|  | A is not correct because $\mathrm{BF}_{3}$ is trigonal pyramidal |  |
| B is not correct because $\mathrm{CH}_{4}$ is tetrahedral |  |  |
| $\mathbf{C}$ is not correct because $\mathrm{H}_{2} \mathrm{O}$ is V-shaped |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{3}$ | The only correct answer is C | (1) |
|  | A is not correct because the fluoride ion is the least polarisable |  |
|  | B is not correct because the fluoride ion is the least polarisable |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{4}$ | The only correct answer is A <br> B is not correct because the bonding electron pair will be closer to <br> the chlorine <br> C is not correct because the hydrogen will be $\delta+$ and the chlorine <br> $\delta-$ | (1) |
| D is not correct because the bonding electron pair will be closer to <br> the chlorine and the hydrogen will be $\delta+$ and the chlorine $\delta-$ |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{5}$ | The only correct answer is C <br> A is not correct because equilibria are dynamic and the reactions <br> continue | (1) |
| B is not correct because equilibrium concentrations do not need to |  |  |
| be equal |  |  |
| D is not correct because this will only be true when <br> is independent of the establishment of equilibrium$\quad \Delta \mathrm{H}=0$, and |  |  |$\quad$.

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{6}$ | The only correct answer is C <br> A is not correct because oxidising agents are reduced <br> B is not correct because oxidising agents are reduced and gain <br> electrons <br> D is not correct because oxidising agents gain electrons | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{7}$ | The only correct answer is C | (1) |
|  | A is not correct because atomic radius increases as atomic <br> number of Group 2 metals increases | B is not correct because electronegativity decreases as atomic <br> number of Group 2 metals increases |
| D is not correct because thermal stability increases as atomic <br> number of Group 2 metals increases |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{8}$ | The only correct answer is A <br> B is not correct because this value has the correct magnitude but <br> is negative <br> C is not correct because this is the enthalpy change of the reverse <br> reaction <br> D is not correct because this is the enthalpy change of the <br> reaction | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{9}$ | The only correct answer is B <br> A is not correct because calcium compounds give a yellow-red <br> flame test <br> C is not correct because calcium compounds give a yellow-red <br> flame test and calcium chloride would form a neutral solution <br> D is not correct because potassium chloride would form a neutral <br> solution | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 0}$ | The only correct answer is B <br> A is not correct because this compound has six carbon atoms not <br> seven <br> C is not correct because this compound has eight carbon atoms <br> not seven | (1) |
| D is not correct because this compound has eight carbon atoms <br> not seven |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 1}$ | The only correct answer is A | (1) |
| B is not correct because barium hydroxide is the most soluble |  |  |
| Group 2 hydroxide |  |  |
| C is not correct because is not correct because barium hydroxide |  |  |
| is the most soluble Group 2 hydroxide |  |  |
| D is not correct because is not correct because barium hydroxide |  |  |
| is the most soluble Group 2 hydroxide |  |  |$\quad$|  |
| :--- |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 2}$ | The only correct answer is D <br> A is not correct because when expanding the bracket on the LHS, <br> the $1 \mathrm{H}_{2}$ has been subtracted rather than added <br> B is not correct because when expanding the bracket on the LHS, <br> the $1 \mathrm{H}_{2}$ has been omitted <br> C is not correct because when expanding the bracket on the LHS, <br> the $1 \mathrm{H}_{2}$ has not been been changed to 2 H for the hydrocarbon <br> formula | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 3}$ | The only correct answer is A | (1) |
|  | B is not correct because ozone does not reflect UV radiation <br> C is not correct because ozone does not break down <br> chlorofluorocarbons | D is not correct because ozone does not reflect <br> chlorofluorocarbons |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 4}$ | The only correct answer is C <br> A is not correct because this ignores the charge balance and <br> miscalculates the oxidation number of chlorine as +4 | (1) |
| B is not correct because this neglects the negative charge on the <br> RHS | D is not correct because this ignores the charge balance and <br> miscalculates the oxidation number of chlorine as +6 |  |

| Question <br> Number | Answer | Mark |
| :---: | :---: | :---: |
| 15 | The only correct answer is D <br> A is not correct because the conversion of butanoic acid to butan1 -ol is a reduction <br> B is not correct because the conversion of butanoic acid to butan-1-ol is a reduction <br> C is not correct because the conversion of butanoic acid to butan1 -ol is a reduction | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 6}$ | The only correct answer is C <br> A is not correct because this is $40 \%$ of 8.4 g (the mass of the <br> product) <br> B is not correct because this is the mass required if the yield is <br> $100 \%$ <br> D is not correct because the molar masses have been used the <br> wrong way round | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 7}$ | The only correct answer is B <br> A is not correct because this compound is oxidised to form an <br> aldehyde or a carboxylic acid <br> C is not correct because this compound cannot be oxidised <br> D is not correct because this compound is oxidised to form an <br> aldehyde or a carboxylic acid | (1) |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 8}$ | The only correct answer is B <br> A is not correct because this answer is based on 4 mol of nitrate <br> ions per mole of calcium nitrate <br> C is not correct because this answer is based on 1 mol of nitrate <br> ions per mole of calcium nitrate | (1) |
| D is not correct because this answer is based on 0.5 mol of nitrate <br> ions per mole of calcium nitrate |  |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{1 9}$ | The only correct answer is B | (1) |
|  | A is not correct because the calculation gives an $A_{r}=63.9$ but <br> $A_{r}(\mathrm{Ca})=40.1$ <br> $\mathbf{C}$ is not correct because the calculation gives an $\mathrm{A}_{r}=63.9$ but <br> $\mathrm{A}_{r}(\mathrm{Mg})=24.3$ <br> D is not correct because the calculation gives an $A_{r}=63.9$ but <br> $\mathrm{A}_{r}(N a \times 2)=46$ |  |

| Question <br> Number | Answer | Mark |
| :--- | :--- | :---: |
| $\mathbf{2 0}$ | The only correct answer is B | (1) |
|  | A is not correct because tetrathionate is formed not thiosulfate <br> C is not correct because tetrathionate is formed not sulphite <br> D is not correct because tetrathionate is formed not <br> peroxodisulfate |  |

## Section B

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 1 ( a ) ( i )}$ | Iodide $/ \mathbf{I}^{-} /$Silver Iodide/Agl | Iodine ion /l/iodine | (1) |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 21(a)(ii) | EITHER <br> Chloride/Silver chloride / $\mathrm{Cl}^{-} / \mathrm{AgCl}$ <br> OR <br> Bromide /Silver Bromide / $\mathrm{Br}^{-} / \mathrm{AgBr}$ <br> ALLOW <br> Both | chlorine / Cl / chlorine ions <br> bromine / Br /bromine ions | (1) |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 1 ( a ) ( \text { (iii) }}$ | $\mathrm{Ag}^{+}(\mathrm{aq})+\mathrm{I}^{-}(\mathrm{aq}) \rightarrow \mathrm{AgI}(\mathrm{s})$ |  | (2) |
|  | Species (1) <br> All state symbols <br> M2 dependent on M1 (or near miss) |  |  |
|  | ALLOW |  |  |
|  | TE on incorrect halide in (a)(i) Max 2 <br> If the halide in (a)(ii) is used in a <br> completely correct equation award 1 |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 1 ( b ) ( i )}$ | $\mathrm{HCl}(\mathrm{aq}) / \mathrm{HCl}(\mathrm{g}) / \mathrm{HCl}$ <br> $\mathbf{I G N O R E}$ <br> Hydrogen chloride / hydrochloric acid |  | (1) |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 1 ( b ) ( i i )}$ | $\mathrm{H}_{2} \mathrm{SO}_{4}+\mathrm{KCl} \rightarrow \mathrm{KHSO}_{4}+\mathrm{HCl}$ |  |  |
|  | ALLOW |  | (1) |
|  | $\mathrm{H}_{2} \mathrm{SO}_{4}+2 \mathrm{KCl} \rightarrow \mathrm{K}_{2} \mathrm{SO}_{4}+2 \mathrm{HCl}$ <br> ALLOW <br> Multiples <br> $\mathrm{HKSO}_{4}$ <br> IGNORE <br> State symbols, even if incorrect |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |  |
| :--- | :--- | ---: | :--- | :--- |
| $\mathbf{2 1 ( c ) ( i )}$ | $\left(\mathrm{In} \mathrm{H}_{2} \mathrm{SO}_{4}\right)+6 /+\mathrm{VI} / 6+$ | (1) |  | (2) |
|  | $\left(\mathrm{In} \mathrm{SO}_{2}\right)+4 /+\mathrm{IV} / 4+$ | (1) |  |  |
|  | Penalise omission of + sign once only |  |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 1 ( c ) ( i i )}$ | $\mathrm{H}_{2} \mathrm{SO}_{4}+\mathbf{2 H}+\mathbf{2} \mathrm{Br}^{-} \rightarrow \mathrm{Br}_{2}+\mathrm{SO}_{2}+$ <br> $\mathbf{2 H} \mathrm{H}_{2}$ <br> $\mathbf{M 1 :}$ for both $\mathrm{Br}_{2}$ and $\mathrm{SO}_{2}$ as products (1) <br> M2: for coefficients 2, 2 and 2 <br>  <br>  <br>  <br>  <br>  <br>  <br> ALLOW multiples <br> M2 depends on M1 <br> IGNORE <br> state symbols even if incorrect | (2) |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 1 ( d )}$ | ALLOW products in either order with matching <br> observation <br> Hydrogen sulfide / H2S <br> Smell of (rotten) eggs/pungent / bad <br> ALLOW <br> Lead ethanoate/nitrate paper turns black (1) |  | (4) |
| Sulfur / S / S8 |  |  |  |
| Yellow and solid /precipitate |  |  |  |
| If I2 is included with the two reduction products |  |  |  |
| then Max 3 |  |  |  |
| Observation depends on correct product |  |  |  |
| IGNORE <br> further tests on products and results |  |  |  |

(Total for Question 21 = 14 marks)

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 2 ( a )}$ | To increase the surface area (of the solid) |  | (1) |
|  | OR |  |  |
|  | to increase rate (of reaction)/goes faster/speeds up  <br> I GNORE  <br> To ensure complete reaction  |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 2 ( b )}$ | $\mathrm{MgCO}_{3}(\mathrm{~s})+2 \mathrm{HCl}(\mathrm{aq}) \rightarrow \mathrm{MgCl}_{2}(\mathrm{aq})+\mathrm{H}_{2} \mathrm{O}(\mathrm{I})+\mathrm{CO}_{2}(\mathrm{~g})$ |  | (2) |
|  | $\mathbf{O R}$ |  |  |
|  | $\mathrm{MgCO}_{3}(\mathrm{~s})+2 \mathrm{H}^{+}(\mathrm{aq}) \rightarrow \mathrm{Mg}^{2+}(\mathrm{aq})+\mathrm{H}_{2} \mathrm{O}(\mathrm{I})+\mathrm{CO}_{2}(\mathrm{~g})$ |  |  |
|  | Species <br> Balancing and all state symbols <br> $\mathrm{M2}$ dependent on M 1 <br> ALLOW | $(1)$ |  |
|  | M 2 for fully correct equation with $\mathrm{H}_{2} \mathrm{CO}_{3}(\mathrm{aq})$ |  |  |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 22(c) | M1: Maximum rate at start / starts fast and (gradually) slows (until it stops)/rate decreases <br> ALLOW <br> the rate is constant over the first minute (as it is almost a straight line) <br> M2: Collision frequency decreases/number of (successful) collisions decreases <br> AND <br> concentration of hydrochloric acid decreases / surface area of mineral decreases/concentration of reactants/ reactants used up <br> M3: Rate is zero / reaction stops (between 3.5-4 min) when all $\mathrm{MgCO}_{3}$ /solid has reacted | Between molecules/atoms <br> Concentration of $\mathrm{MgCO}_{3}$ <br> Just activation energy reasoning <br> All the acid/ reactants used up | (3) |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| 22(d)(i) | 1st mark: <br> Reading off $200 \mathrm{~cm}^{3}$ from graph <br> 2nd mark: <br> mol $\mathrm{CO}_{2}=\mathrm{mol} \mathrm{MgCO}_{3}$ <br> $(=200 \div 24000)$ <br> $=0.008333(\mathrm{~mol}) / 8.333 \times 10^{-3}(\mathrm{~mol})$ <br> or fraction $1 / 120(\mathrm{~mol})$ <br> IGNORE <br> SF except 1 SF <br> Correct answer with or without working (2) <br> scores <br> No TE on incorrect reading from graph |  | (2) |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 22(d)(ii) | MP1 |  | (2) |
|  | $\begin{aligned} & \text { Mass } \mathrm{MgCO}_{3}(=0.008333333 \times 84.3) \\ & =0.7025 / 0.703(\mathrm{~g}) \end{aligned}$ |  |  |
|  | ALLOW |  |  |
|  | 0.702 (g) |  |  |
|  | Use of $84 \mathrm{~g} \mathrm{~mol}^{-1}=0.70(0) \mathrm{g}$ TE from d(i) |  |  |
|  | Correct answer with or without working scores 1 <br> MP2 |  |  |
|  | $\% \text { of } \mathrm{MgCO}_{3}=\frac{0.7025}{0.936} \times 100 \%$ |  |  |
|  | \% of $\mathrm{MgCO}_{3}=75.0534 \%$ |  |  |
|  | ALLOW <br> Use of $84 \mathrm{~g} \mathrm{~mol}^{-1}$ giving 74.78632\% |  |  |
|  | Correct answer with or without working scores 1 |  |  |
|  | I GNORE <br> SF except 1 SF in MP1 and MP2 |  |  |
|  | TE from incorrect no of moles from d (i) |  |  |
|  | TE from incorrect Mr calculation in MP1 as long as the answer is less than 100 \% |  |  |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 22(e) | M1 <br> $\mathrm{CO}_{2}$ (slightly) soluble/dissolves/absorbed in water <br> ALLOW <br> Remains in water <br> M2 <br> (volume of $\mathrm{CO}_{2}$ collected is less) so mass / moles of $\mathrm{MgCO}_{3}$ lower /reduced OR (volume of $\mathrm{CO}_{2}$ collected is less) so \% (by mass) of $\mathrm{MgCO}_{3}$ lower <br> M2 is dependent on M1 or indication that the volume of $\mathrm{CO}_{2}$ is less. | $\mathrm{CO}_{2}$ escapes | (2) |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| *23(a)(i) | M1: |  | (3) |
|  | The mixture (initially) goes darker (brown) (because the concentration increases) |  |  |
|  | M2: |  |  |
|  | The mixture turns paler /colourless (on standing) |  |  |
|  | AND |  |  |
|  | ... because the equilibrium shifts to the right |  |  |
|  | ALLOW |  |  |
|  | Suitable alternatives for "to the right", such as: |  |  |
|  | towards the products |  |  |
|  | towards $\mathrm{N}_{2} \mathrm{O}_{4}$ |  |  |
|  | in forward direction <br> favours the right |  |  |
|  |  |  |  |
|  | Right-hand side has fewer (gaseous) moles/molecules | atoms |  |
|  | OR |  |  |
|  | Left-hand side has more (gaseous) moles/molecules |  |  |
|  | I GNORE <br> References to rate |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| 23(a)(ii) | Equilibrium shifts to the <br> left/backwards |  | (1) |
|  | And <br> in the endothermic direction / away <br> from the exothermic side/because the <br> (forward) reaction is exothermic | IGNORE <br> Colour change |  |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| *23(b) | M1: <br> (Addition of alkali) <br> Alkali/ $\mathrm{OH}^{-}$reacts with $\mathrm{H}^{+}$/ alkali removes $\mathrm{H}^{+} /$neutralises acid $\mathrm{H}^{+}$ <br> ALLOW $\begin{equation*} \mathrm{H}^{+}+\mathrm{OH}^{-} \rightarrow \mathrm{H}_{2} \mathrm{O} \tag{1} \end{equation*}$ <br> I GNORE increases the amount of water <br> M2: <br> Equilibrium (position) shifts to the right (forming yellow $\mathrm{CrO}_{4}{ }^{2-}$ ) <br> ALLOW <br> Suitable alternatives for "to the right", <br> such as: <br> towards the products <br> towards $\mathrm{CrO}_{4}{ }^{2-} / \mathrm{H}^{+}$ <br> in forward direction <br> favours the right <br> M2 is dependent on M1 or near miss |  | (2) |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 4 ( a ) ( i )}$ | (Reagents): <br> potassium hydroxide /KOH / sodium (1) <br> hydroxide / NaOH <br> (Conditions): <br> Aqueous/water and heat <br> ALLOW <br> Warm/reflux/ high temperature for heat (1) | $\mathrm{OH}^{-}$ | (2) |
|  | The conditions mark depends on a correct <br> reagent mark or near miss |  |  |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 24(a)(ii) |   <br> M1 <br> Curly arrow from lone pair on $\mathrm{OH}^{-}$to carbon <br> M2 <br> Curly arrow from $\mathrm{C}-\mathrm{Br}$ bond to Br or just beyond <br> M3 <br> Dipole <br> M4 <br> Correct organic product and $\mathrm{Br}^{-}$ion/ $\mathrm{KBr} / \mathrm{NaBr}$ <br> OR <br> Correct $\mathrm{S}_{\mathrm{N}} 2$ mechanism scores (4) <br> M1 <br> Dipole and Curly arrow from $\mathrm{C}-\mathrm{Br}$ bond to Br or just beyond <br> M2 <br> Curly arrow from lone pair to carbon <br> M3 <br> Correct intermediate showing dotted bonds to both Br and OH and negative charge. <br> M4 <br> Correct organic product and $\mathrm{Br}^{-}$ion/ $\mathrm{KBr} / \mathrm{NaBr}$ <br> ALLOW <br> M1, M2 and M4 for $\mathrm{S}_{\mathrm{N}} 1$ mechanism <br> IGNORE <br> Omission of lone pair on $\mathrm{Br}^{-}$ion | Missing hydrogens/ wrong alcohol | (4) |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| * 24(b) | Any three from <br> M1 Water forms two hydrogen bonds <br> M2 butan-1-ol forms (one) hydrogen bond(s) <br> M3 1-bromobutane forms London Forces <br> (1) <br> M4 butan-1-ol forms hydrogen bonds with water <br> M5 butan-1-ol forms London Forces with 1bromobutane <br> M6 1-bromobutane cannot form hydrogen bonds with water <br> ALLOW <br> van der Waals' / dispersion forces <br> I GNORE <br> Dipole-dipole interactions/polarity |  | (3) |

(Total for Question 24 = 9 marks)
Total for SECTI ON B = 41 marks

## Section C

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :---: |
| $\mathbf{2 5 ( a ) ( i ) ~}$ | $\mathrm{M}_{\mathrm{r}} /$ molecular ion / molar mass (of ethanol = <br> 46) <br>  <br>  <br> IGNORE <br> Reference to ${ }^{12} \mathrm{C}$ not ${ }^{13} \mathrm{C}$ | atomic mass | (1) |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 25(a)(ii) | $\mathrm{CH}_{2} \mathrm{OH}^{+}$ <br> OR <br> Displayed formula <br> ALLOW <br> Charge on any part of the ion <br> $\mathrm{CH}_{3}$ is lost (from the molecular ion)/ $\mathrm{C}-\mathrm{C}$ bond is broken <br> I GNORE <br> Fragmentation/molecule breaks down <br> Charge or dot on $\mathrm{CH}_{3}$ | $\mathrm{CH}_{3} \mathrm{O}^{+}$ | (2) |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 5 ( a ) ( \text { iii) }}$ | O-H and (between) $3750-3200\left(\mathrm{~cm}^{-1}\right)$ | Single <br> wavenumber <br> Just <br> 'Alcohol/ethanol' | (1) |
|  | ALLOW <br> Any range that includes 3350 within the <br> correct range |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| *25(b)(i) | 1st mark: <br> Atom / group of atoms /part of a (1) <br> molecule | Just group | (2) |
|  | ALLOW <br> Examples such as C=C, O-H <br> 2nd mark: | Just alkene, alcohol |  |
| that determines its chemical |  |  |  |
| properties /that determines its |  |  |  |
| characteristic set of reactions/how it |  |  |  |
| will react |  |  |  |
| IGNORE |  |  |  |$\quad$| (1) |
| :--- |$\quad$| Physical properties |
| :--- |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 5 ( b ) ( i i )}$ | $2 \mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}+2 \mathrm{Na} \rightarrow 2 \mathrm{C}_{2} \mathrm{H}_{5} \mathrm{ONa}+\mathrm{H}_{2}$ $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{O}-\mathrm{Na}$ <br> OR  <br> $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}+\mathrm{Na} \rightarrow \mathrm{C}_{2} \mathrm{H}_{5} \mathrm{ONa}+1 / 2 \mathrm{H}_{2}$  <br> OR  <br> Other multiples (2) <br> Species  <br> Balancing $(1)$ |  |  |
| M2 dependent on award of M1 or near <br> miss such as $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{O}-\mathrm{Na}$ or incorrect <br> charges on the ethoxide. |  |  |  |
| ALLOW <br> ionic charges on product |  |  |  |
| IGNORE <br> State symbols, even if incorrect |  |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 5 ( c ) ( i )}$ | MP1 <br> Moles of $\mathrm{CO}_{2}(=\underset{44(.0)}{1.79})$ <br> $=0.040681818(\mathrm{~mol})$ | (2) |  |
|  | MP2: <br> Mass of $\mathrm{C}(=12(.0) \times 0.040681818)$ <br> $=0.488 \mathrm{~g}$ |  |  |
| IGNORE <br> SF except 1 SF <br> Correct answer with or without working <br> scores (2) |  |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 5 ( c ) ( i i )}$ | Mass of O ( $=1.20-0.0610-0.488)$ <br> $=0.650818=0.651(\mathrm{~g})$ |  | (1) |
|  | IGNORE <br> SF except 1 SF <br> ALLOW <br>  <br>  <br> TE from (c)(i) |  |  |

| Question Number | Acceptable Answers | Reject | Mark |
| :---: | :---: | :---: | :---: |
| 25(c)(iii) | M1 <br> (Mole ratios) $\begin{array}{lll} C & : H & : O \\ \frac{0.488}{12(.0)} & \frac{0.0610}{1(.0)} & \frac{0.651}{16(.0)} \\ =0.0407 & =0.0610 & =0.0407 \tag{1} \end{array}$ <br> I GNORE SF and rounding <br> M2 <br> (Empirical formula) $\begin{equation*} \mathrm{C}_{2} \mathrm{H}_{3} \mathrm{O}_{2} \tag{1} \end{equation*}$ <br> No TE from incorrect mole ratio |  | (2) |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 5 ( c ) ( i v ) ~}$ | E has Structure 2 because <br> Either <br> $\mathrm{M}_{\mathrm{r}}$ of empirical formula $=59$ <br> and <br> $\frac{118}{59}=2$ <br> OR <br> molecular formula of structure 2 is <br> $\mathrm{C}_{4} \mathrm{H}_{6} \mathrm{O}_{4}$ <br> OR <br> the molecular formula of structure 1 is <br> $\mathrm{C}_{5} \mathrm{H}_{8} \mathrm{O}_{2}$ which is not a multiple of the <br> empirical formula <br> OR <br> the ratio of carbon to oxygen in <br> structure 2 is 1:1 which is the same as <br> the empirical formula <br> OR <br> the ratio of carbon to oxygen in <br> structure 1 is 5:2 <br> No TE from (c) (iii) | (1) |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- | :---: |
| $\mathbf{2 5 ( c ) ( v )}$ | M1  <br> Test with bromine / bromine water (1) <br> M2  |  | (2) |
| Structure $\mathbf{1}$ turns colourless  <br> (from orange / yellow/ brown)  <br> and  <br> Structure 2 no change  <br> OR (1) <br> M1  <br> Test with acidified potassium  <br> manganate((VII))/KMnO4(aq) (1) <br> M2  <br> Structure 1 turns colourless (from  <br> purple/pink )  <br> and  <br> Structure 2 no change  |  |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| 25(c)(vi) |  | (1) |  |
|  | ALLOW <br> OH for O-H <br> and a single carboxylic acid which can <br> be oxidised <br> IGNORE <br> Skeletal and structural formulae <br> Connectivity of a vertical OH |  |  |

| Question <br> Number | Acceptable Answers | Reject | Mark |
| :--- | :--- | :--- | :--- |
| *25(c)(vii) | M1 <br> Restricted rotation / no rotation/ |  | (2) |
|  | AND <br> around the C=C/ double bond/ pi (1) <br> bond | M2 <br> Each or both C atom(s) of the <br> (C=C ) double bond is attached to <br> (two) different groups/different <br> atoms/functional groups <br> This can be shown with 2 diagrams <br> of structure 1 | Two different <br> molecules |
| (1) |  |  |  |
