## GCE Chemistry (6CH04/01)

Edexcel is one of the leading examining and awarding bodies in the UK and throughout the world. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers.

Through a network of UK and overseas offices, Edexcel's centres receive the support they need to help them deliver their education and training programmes to learners.

For further information, please call our GCE line on 0844576 0025, our GCSE team on 0844 576 0027, or visit our website at www.edexcel.com.

If you have any subject specific questions about the content of this Examiners' Report that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

Ask The Expert can be accessed online at the following link:

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- $\quad$ All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

## Using the Mark Scheme

The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.
/ means that the responses are alternatives and either answer should receive full credit.
( ) means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer.
Phrases/words in bold indicate that the meaning of the phrase or the actual word is essential to the answer.
ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

## Quality of Written Communication

Questions which involve the writing of continuous prose will expect candidates to:

- write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.

Full marks will be awarded if the candidate has demonstrated the above abilities.
Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

|  | peak at $3400\left(\mathrm{~cm}^{-1}\right)$ |  |  |
|  | MAY BE ANNOTATED ON SPECTRUM |  |  |
|  | ALLOW anything in the Data Booklet range which is 3200 to $3750\left(\mathrm{~cm}^{-1}\right)$ | X is a phenol (0) |  |
|  | $X$ has an O-H (group) OR X is an alcohol (1) |  |  |
|  | (From the chemical information) |  |  |
|  | X is primary or secondary (alcohol) OR X is not tertiary (alcohol) OR $X$ is any two from: |  |  |
|  | butan-1-ol, butan-2-ol, (2)-methylpropan-1-ol |  |  |
|  | Y is an aldehyde or a ketone <br> ALLOW " Y is a carbonyl" |  |  |
|  | NOTE RE THIRD/FOURTH SCORING POINTS: |  |  |
|  | If just state that X is butan-1-ol with no justification but then go on to state $Y$ is butanal, give CQ mark |  |  |
|  | OR |  |  |
|  | If just state that $X$ is butan- 2 -ol with no justification but then go on to state $Y$ is butanone, give (1) CQ mark |  |  |
|  | OR <br> If just state that $\mathbf{X}$ is (2)-methylpropan- 1 -ol with no justification |  |  |
|  | but then go on to state Y is (2)-methylpropanal, give CQ mark |  |  |
|  | NOTE: These Part (a) marks may be awarded from answers to either Part (a) or Part (b) |  |  |
