**Chemistry**  
Advanced  
Unit 4: General Principles of Chemistry I – Rates, Equilibria and Further Organic Chemistry  
(including synoptic assessment)

Tuesday 5 June 2018 – Afternoon Time: 1 hour 40 minutes	Paper Reference <b>WCH04/01</b>
--	------------------------------------

Candidates must have: Scientific calculator Data Booklet	Total Marks
---	-------------

### Instructions

- Use **black** ink or **black** ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*

### Information

- The total mark for this paper is 90.
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*
- Questions labelled with an **asterisk** (\*) are ones where the quality of your written communication will be assessed – *you should take particular care with your spelling, punctuation and grammar, as well as the clarity of expression, on these questions.*
- A Periodic Table is printed on the back cover of this paper.

### Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.
- Show all your working in calculations and include units where appropriate.

## SECTION A

Answer ALL the questions in this section. You should aim to spend no more than 20 minutes on this section. For each question, select one answer from A to D and put a cross in the box . If you change your mind, put a line through the box  and then mark your new answer with a cross .

1 In gas chromatography, the time taken for a substance to travel through the column is called the

- A reference time.
- B retention time.
- C separation time.
- D travelling time.

(Total for Question 1 = 1 mark)

2 Propanoyl chloride,  $C_2H_5COCl$ , is formed when propanoic acid reacts with

- A  $Cl_2$
- B  $HCl$
- C  $NH_4Cl$
- D  $PCl_5$

(Total for Question 2 = 1 mark)

Use this space for any rough working. Anything you write in this space will gain no credit.

3 Different types of radiation are used for a range of purposes in chemistry.

(a) Which types of radiation could be used to heat chemical reactions?

(1)

- A Infrared and microwave
- B Microwave and ultraviolet
- C Radio wave and infrared
- D Ultraviolet and radio wave

(b) Which type of radiation is used in the initiation step of some chemical reactions?

(1)

- A Infrared
- B Microwave
- C Radio wave
- D Ultraviolet

(Total for Question 3 = 2 marks)

Use this space for any rough working. Anything you write in this space will gain no credit.

4 This question refers to the following molecules, all of which have a carbonyl group.

**W****X****Y****Z**

(a) A pale yellow precipitate is formed when iodine in alkali reacts with

(1)

- A **W** and **X** only.
- B **Y** only.
- C **Y** and **Z** only.
- D **Z** only.

(b) Geometric isomerism is shown by

(1)

- A **W** only.
- B **X** only.
- C **Y** and **Z** only.
- D none of **W**, **X**, **Y** or **Z**.

(c) A brick red precipitate is formed on warming blue Benedict's or Fehling's solutions with

(1)

- A **W** only.
- B **X** only.
- C **W** and **X** only.
- D **Y** and **Z** only.

(d) Pentan-2-ol is formed when lithium tetrahydridoaluminate(III) in dry ether reduces (1)

- A W and X only.
- B Y only.
- C Y and Z only.
- D Z only.

(e) A molecule with a branched carbon chain is formed by nucleophilic addition of hydrogen cyanide, in the presence of potassium cyanide, with (1)

- A W only.
- B W and X only.
- C Y only.
- D Y and Z only.

(f) A mass spectrum fragment with an  $m/e$  value of 29 would be expected for (1)

- A W and X only.
- B X and Y only.
- C Y and Z only.
- D W, X and Y only.

(Total for Question 4 = 6 marks)

Use this space for any rough working. Anything you write in this space will gain no credit.

5 The equilibrium between dichromate(VI) ions and chromate(VI) ions can be represented by

orange

yellow

(a) At equilibrium, the expression for the equilibrium constant,  $K_c$ , is

(1)

**A**  $K_c = \frac{[\text{CrO}_4^{2-}]^2 \times [\text{H}^+]^2}{[\text{Cr}_2\text{O}_7^{2-}]}$

**B**  $K_c = \frac{2[\text{CrO}_4^{2-}] \times 2[\text{H}^+]}{[\text{Cr}_2\text{O}_7^{2-}]}$

**C**  $K_c = \frac{[\text{CrO}_4^{2-}]^2 + [\text{H}^+]^2}{[\text{Cr}_2\text{O}_7^{2-}]}$

**D**  $K_c = \frac{2[\text{CrO}_4^{2-}] + 2[\text{H}^+]}{[\text{Cr}_2\text{O}_7^{2-}]}$

(b) The addition of a small quantity of sodium hydroxide to an orange equilibrium mixture

(1)

- A** turns the solution from orange to green.
- B** turns the solution from orange to colourless.
- C** shifts the equilibrium position to the left.
- D** shifts the equilibrium position to the right.

(Total for Question 5 = 2 marks)

Use this space for any rough working. Anything you write in this space will gain no credit.

- 6 The reaction between solid copper and aqueous silver nitrate is

What are the units for the equilibrium constant for this reaction?

(1)

- A  $\text{dm}^3 \text{mol}^{-1}$
- B  $\text{mol dm}^{-3}$
- C  $\text{mol}^{-1} \text{dm}^{-3}$
- D None, because there are equal moles on each side of the equation.

(Total for Question 6 = 1 mark)

- 7 The equilibrium involving phosphorus(V) chloride, phosphorus(III) chloride and chlorine gas is

The numerical value of  $K_p$  is 1.8 at 250 °C.

- (a) The expression for the partial pressure of chlorine gas is

(1)

- A total pressure  $\times$  (moles of chlorine gas  $\div$  total moles of gas)
- B total pressure  $\times$  moles of chlorine gas
- C total pressure  $\div$  (moles of chlorine gas  $\div$  total moles of gas)
- D total pressure  $\div$  moles of chlorine gas

- (b) The equilibrium partial pressures of phosphorus(III) chloride and chlorine gas are 0.614 atm and 0.946 atm respectively at 250 °C.

What is the equilibrium partial pressure, in atm, of phosphorus(V) chloride?

(1)

- A 0.24
- B 0.32
- C 1.05
- D 3.10

8 Methanol is produced by the catalysed reaction between carbon monoxide and hydrogen:

(a) The equilibrium yield of methanol is favoured by **both**

(1)

- A a low temperature and a low pressure.
- B a low temperature and a high pressure.
- C a high temperature and a low pressure.
- D a high temperature and a high pressure.

(b) The equilibrium constant,  $K_c$ , for this reaction has a numerical value of 3.64 at a certain temperature.

This value of  $K_c$  means that at this temperature

(1)

- A 3.64 mol of methanol is made.
- B 3.64 mol of methanol is formed from 1 mol of carbon monoxide.
- C the numerator in the  $K_c$  expression is 3.64 times larger than the denominator.
- D the equilibrium concentration of methanol is 3.64 times that of hydrogen.

(Total for Question 8 = 2 marks)

Use this space for any rough working. Anything you write in this space will gain no credit.

9 The energy cycle for the dissolving of magnesium chloride in water is

(a) The enthalpy of hydration of the magnesium ion is  $-1920 \text{ kJ mol}^{-1}$ .

What is the enthalpy of hydration, in  $\text{kJ mol}^{-1}$ , of the chloride ion?

(1)

- A  $-303$
- B  $-377$
- C  $-606$
- D  $-754$

(b) The enthalpy of hydration of potassium ions is less exothermic than the value for magnesium ions because

(1)

- A potassium ions form weaker bonds in the ionic lattice.
- B potassium has a lower ionisation energy.
- C potassium ions are smaller.
- D potassium ions have a smaller charge density.

(Total for Question 9 = 2 marks)

10 Chloric(I) acid, HClO, and nitric(III) acid, HNO<sub>2</sub>, form the equilibrium

A Brønsted-Lowry acid and its conjugate base are

	Acid	Conjugate base
<input type="checkbox"/> A	HClO	H <sub>2</sub> ClO <sup>+</sup>
<input type="checkbox"/> B	HClO	HNO <sub>2</sub>
<input type="checkbox"/> C	HNO <sub>2</sub>	NO <sub>2</sub> <sup>-</sup>

## SECTION B

Answer ALL the questions. Write your answers in the spaces provided.

11 This is a question about weak acids.

- (a) Calculate the pH of a  $0.0500 \text{ mol dm}^{-3}$  solution of propanoic acid given that  $K_a = 1.34 \times 10^{-5} \text{ mol dm}^{-3}$  at  $25^\circ\text{C}$ .

Give your answer to **two** decimal places.

- (b) A  $0.0400 \text{ mol dm}^{-3}$  solution of pentanoic acid with  $\text{pH} = 3.13$  was used in a titration experiment at  $25^\circ\text{C}$ .

A  $25.0 \text{ cm}^3$  sample of the pentanoic acid solution was placed in a conical flask and the burette filled with a  $0.0400 \text{ mol dm}^{-3}$  solution of potassium hydroxide.

- (i) Calculate the pH of the potassium hydroxide solution.

$$[K_w = 1.00 \times 10^{-14} \text{ mol}^2 \text{ dm}^{-6}] \quad (1)$$

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

- (b) The halogenoalkane, 1-bromopropane, was hydrolysed at 20°C with aqueous sodium hydroxide. The results were:

Experiment number	$[\text{C}_3\text{H}_7\text{Br}]$ / $\text{mol dm}^{-3}$	$[\text{OH}^-]$ / $\text{mol dm}^{-3}$	Rate of reaction / $\text{mol dm}^{-3} \text{s}^{-1}$
1	0.010	0.005	0.16
2	0.010	0.020	0.66
3	0.020	0.020	1.34

- (i) Deduce the order with respect to 1-bromopropane and the order with respect to hydroxide ions in this reaction.  
Fully justify your answers.

(4)

- (ii) The replacement of sodium hydroxide with potassium hydroxide has no effect on the results obtained.  
What does this indicate about the sodium and potassium ions in the steps of the reaction mechanism?

(1)

- (c) The halogenoalkane, 2-bromopentane, was hydrolysed at 20 °C with sodium hydroxide of similar concentration and the results gave the rate equation

- (i) Write the mechanism for the hydrolysis of 2-bromopentane. Include curly arrows, and any relevant dipoles and lone pairs of electrons.

You may use R to represent the  $\text{CH}_3\text{CH}_2\text{CH}_2$  group.

(3)

- (ii) State how your mechanism is consistent with the rate equation.

(1)

- (iii) A single optical isomer of 2-bromopentane is hydrolysed by this mechanism. Explain fully whether or not the product of this hydrolysis is optically active.

(3)
