MARKING INSTRUCTIONS

PREPARATION FOR MARKING

SCORIS

1. Make sure that you have accessed and completed the relevant training packages for on-screen marking: *scoris assessor Online Training, OCR Essential Guide to Marking.*
2. Make sure that you have read and understood the mark scheme and the question paper for this unit. These are posted on the RM Cambridge Assessment Support Portal <http://www.rm.com/support/ca>
3. Log-in to scoris and mark the **required number** of practice responses ("scripts") and the **required number** of standardisation responses.

YOU MUST MARK 10 PRACTICE AND 10 STANDARDISATION RESPONSES BEFORE YOU CAN BE APPROVED TO MARK LIVE SCRIPTS.

MARKING

1. Mark strictly to the mark scheme.
2. Marks awarded must relate directly to the marking criteria.
3. The **schedule** of dates is very important. It is essential that you meet the scoris 50% and 100% (traditional 50% Batch 1 and 100% Batch 2) deadlines. If you experience problems, you must contact your Team Leader (Supervisor) without delay.
4. If you are in any doubt about applying the mark scheme, consult your Team Leader by telephone, email or via the scoris messaging system.

5. Work crossed out:
 - a. where a candidate crosses out an answer and provides an alternative response, the crossed out response is not marked and gains no marks
 - b. if a candidate crosses out an answer to a whole question and makes no second attempt, and if the inclusion of the answer does not cause a rubric infringement, the assessor should attempt to mark the crossed out answer and award marks appropriately.
 6. Always check the pages (and additional objects if present) at the end of the response in case any answers have been continued there. If the candidate has continued an answer there then add a tick to confirm that the work has been seen.
 7. There is a NR (No Response) option. Award NR (No Response)
 - if there is nothing written at all in the answer space
 - OR if there is a comment which does not in any way relate to the question (e.g. 'can't do', 'don't know')
 - OR if there is a mark (e.g. a dash, a question mark) which isn't an attempt at the question.
- Note: Award 0 marks – for an attempt that earns no credit (including copying out the question).
8. The scoris **comments box** is used by your Team Leader to explain the marking of the practice responses. Please refer to these comments when checking your practice responses. **Do not use the comments box for any other reason.**
 - If you have any questions or comments for your Team Leader, use the phone, the scoris messaging system, or email.
 9. Assistant Examiners will send a brief report on the performance of candidates to their Team Leader (Supervisor) via email by the end of the marking period. The report should contain notes on particular strengths displayed as well as common errors or weaknesses. Constructive criticism of the question paper/mark scheme is also appreciated.

10. For answers marked by levels of response:

Read through the whole answer from start to finish, concentrating on features that make it a stronger or weaker answer using the indicative scientific content as guidance. The indicative scientific content indicates the expected parameters for candidates' answers, but be prepared to recognise and credit unexpected approaches where they show relevance.

Using a 'best-fit' approach based on the science content of the answer, first decide which set of level descriptors, Level 1, Level 2 or Level 3, **best** describes the overall quality of the answer using the guidelines described in the level descriptors in the mark scheme.

Once the level is located, award the higher or lower mark.

The higher mark should be awarded where the level descriptor has been evidenced and all aspects of the communication statement (in italics) have been met.

The lower mark should be awarded where the level descriptor has been evidenced but aspects of the communication statement (in italics) are missing.

In summary:

- **The science content determines the level.**
- **The communication statement determines the mark within a level.**

Level of response questions on this paper are 19(d) and 22(b).

11. Annotations

Annotation	Meaning
DO NOT ALLOW	Answers which are not worthy of credit
IGNORE	Statements which are irrelevant
ALLOW	Answers that can be accepted
()	Words which are not essential to gain credit
—	Underlined words must be present in answer to score a mark
ECF	Error carried forward
AW	Alternative wording
ORA	Or reverse argument

12. Subject-specific Marking Instructions

INTRODUCTION

Your first task as an Examiner is to become thoroughly familiar with the material on which the examination depends. This material includes:

- the specification, especially the assessment objectives
- the question paper
- the mark scheme.

You should ensure that you have copies of these materials.

You should ensure also that you are familiar with the administrative procedures related to the marking process. These are set out in the OCR booklet **Instructions for Examiners**. If you are examining for the first time, please read carefully **Appendix 5 Introduction to Script Marking: Notes for New Examiners**.

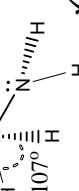

Please ask for help or guidance whenever you need it. Your first point of contact is your Team Leader.

SECTION B

Question	Answer	Marks	Guidance
16 (a)		2	ALLOW half headed arrows
(b)	The forward reaction is exothermic, so an increase in temperature favours the backward reaction (owtte) ✓ therefore there will be more N ₂ and H ₂ OR less NH ₃ in the equilibrium mixture, AND therefore the value of the equilibrium constant will decrease (owtte) ✓	2	ALLOW names of compounds ALLOW reactants/product instead of compounds 2 nd mark only available if deduced from 1 st mark ALLOW ECF for 2 nd mark
(c)	FIRST CHECK THE ANSWER ON THE ANSWER LINE IF answer = 2.37×10^{-6} kPa ⁻² award 5 marks IF answer = 2.37×10^{-6} with incorrect units award 4 marks At equilibrium, $n(\text{H}_2) = 0.300 \text{ (mol)}$ AND $n(\text{NH}_3) = 0.100 \text{ (mol)}$ ✓ $\rho(\text{N}_2) = \frac{0.400}{0.800} \times 500 = 250 \text{ kPa AND}$ $\rho(\text{H}_2) = \frac{0.300}{0.800} \times 500 = 187.5 \text{ kPa AND}$ $\rho(\text{NH}_3) = \frac{0.100}{0.800} \times 500 = 62.5 \text{ kPa } \checkmark$ $K_p = \frac{p(\text{NH}_3)^2}{p(\text{N}_2) \times p(\text{H}_2)^3} = \frac{62.5^2}{250 \times 187.5^3}$ = $2.37 \times 10^{-6} \checkmark \text{ kPa}^{-2} \checkmark$	5	Final answer must be correct and have the correct units to score all five marks ALLOW calculator value for K_p correctly rounded to three or more significant figures. If there is an alternative answer, check to see if there is any ECF credit possible using working below

Question	Answer	Marks	Guidance
(d)	FIRST CHECK THE ANSWER ON THE ANSWER LINE IF answer = 2580 (tonnes) award 3 marks	3	If there is an alternative answer, check to see if there is any ECF credit possible using working below ALLOW 2.58×10^3 tonnes
	$n(\text{NH}_3) = \frac{1.96 \times 10^{10}}{24}$ OR 8.167×10^8 (mol) AND $n(\text{H}_2) = \frac{8.167 \times 10^8}{2} \times 3 = 1.225 \times 10^9$ (mol) ✓		AW 100% yield = 2.063×10^{10} dm ³ ✓ Amount of NH ₃ = 8.596×10^8 mol AND Amount of H ₂ = 1.289×10^9 mol ✓ Mass of H ₂ = 2580 (tonnes) ✓
	Mass of H ₂ = $\frac{2.450 \times 10^9}{1 \times 10^6} = 2450$ (tonnes) ✓ Mass of H ₂ for 95% yield = $\frac{2450 \times 100}{95} = 2580$ (tonnes) ✓		ALLOW 2579 (tonnes) (calculator answer rounded to nearest whole number)

Question	Answer	Marks	Guidance
19 (a)	Mg(s) + 2HCl(aq) → MgCl ₂ (aq) + H ₂ (g) ✓ Effervescence AND solid dissolves ✓	2	State symbols are required ALLOW solid disappears
(b)	Lattice enthalpy of MgCl ₂ is more exothermic than CaCl ₂ ✓ because magnesium ion/Mg ²⁺ is smaller (than calcium ions/Ca ²⁺) OR Mg ²⁺ has a greater charge density ✓ therefore the attraction between Mg ²⁺ and Cl ⁻ is greater (than between Ca ²⁺ and Cl ⁻) ✓	3	ORA throughout ALLOW 'charge density' here only ALLOW magnesium/Mg is smaller DO NOT ALLOW Mg ²⁺ has a smaller atomic radius DO NOT ALLOW chlorine ions DO NOT ALLOW Mg has greater attraction ALLOW 'attracts with more force' for greater attraction but DO NOT ALLOW 'greater force' (could be repulsion)
(c) (i)	F B G E D FIVE correct FOUR correct THREE correct	3	ALLOW 1450 736 G 76 -642 IF only one or two correct, award 0 marks.
(ii)	-642 - (76 + (2 × 150) + 736 + 1450 + (2 × -349)) ✓ -642 - 1864 = -2506 ✓ (kJ mol ⁻¹)	2	ALLOW for 1 mark: -2705 (2 × 150 and 2 × 349 not used for C) -2356 (2 × 150 not used for C) -2855 (2 × 349 not used for C) +2506 (wrong sign) DO NOT ALLOW any other answers

Question (d)*	Answer	Marks	Guidance
<p>Please refer to the marking instructions on page 4 of this mark scheme for guidance on how to mark this question.</p> <p>Level 3 (5–6 marks) Describes and explains concisely the trend in reactivity of the halogens AND Full observations of redox reactions backed up by at least two equations</p> <p><i>There is a well-developed explanation which is clear and logically structured. The observations and equations are relevant to those trends explained. Clear and confident knowledge of relevant technical language.</i></p> <p>Level 2 (3–4 marks) Describes and explains the trend in reactivity of the halogens AND Is able to recall a redox reaction by suitable observations and correctly link to an equation</p> <p><i>There is an explanation with some structure. The observations and equations are in the most part relevant to the trend explained. Sound grasp of relevant technical language.</i></p> <p>Level 1 (1–2 marks) Describes the trend in reactivity of the halogens with some attempt at explanation AND Is able to recall a redox reaction either by suitable observation or by equation</p>	6	<p>Trend in reactivity</p> <ul style="list-style-type: none"> More shells or increasing radius down the group Increased shielding down the group More difficult to gain an electron <p>Observations</p> <ul style="list-style-type: none"> Reaction of Cl_2 or Br_2 with I^-: orange/brown solution OR purple in organic Reaction of Cl_2 with Br^-: yellow solution OR orange in organic <p>Reaction equations</p> <ul style="list-style-type: none"> $\text{Cl}_2 + 2\text{Br}^- \rightarrow \text{Br}_2 + 2\text{Cl}^-$ $\text{Cl}_2 + 2\text{I}^- \rightarrow \text{I}_2 + 2\text{Cl}^-$ OR $\text{Br}_2 + 2\text{I}^- \rightarrow \text{I}_2 + 2\text{Br}^-$ Order of reactivity linked to observations
