## GCE AS MARKING SCHEME

AUTUMN 2020

AS
CHEMISTRY - COMPONENT 1 B410U10-1

## INTRODUCTION

This marking scheme was used by WJEC for the 2020 examination. It was finalised after detailed discussion at examiners' conferences by all the examiners involved in the assessment. The conference was held shortly after the paper was taken so that reference could be made to the full range of candidates' responses, with photocopied scripts forming the basis of discussion. The aim of the conference was to ensure that the marking scheme was interpreted and applied in the same way by all examiners.

It is hoped that this information will be of assistance to centres but it is recognised at the same time that, without the benefit of participation in the examiners' conference, teachers may have different views on certain matters of detail or interpretation.

WJEC regrets that it cannot enter into any discussion or correspondence about this marking scheme.

## GCE AS CHEMISTRY COMPONENT 1 <br> the language of chemistry, structure of matter and simple reactions <br> AUTUMN 2020 MARK SCHEME

GENERAL INSTRUCTIONS
Recording of marks
Examiners must mark in red ink.
One tick must equate to one mark, apart from extended response questions where a level of response mark scheme is applied.
Question totals should be written in the box at the end of the question.
Question totals should be entered onto the grid on the front cover and these should be added to give the script total for each candidate.

## Extended response questions

A level of response mark scheme is applied. The complete response should be read in order to establish the most appropriate band. Award the higher mark if there is a good match with content and communication criteria. Award the lower mark if either content or communication barely meets the criteria.

Marking rules
All work should be seen to have been marked.
Marking schemes will indicate when explicit working is deemed to be a necessary part of a correct answer.
Crossed out responses not replaced should be marked.

The following may be used in marking schemes or in the marking of scripts to indicate reasons for the marks awarded.
cao $=$ correct answer only
ecf $=$ error carried forward
ecf = error carried forward
bod $=$ benefit of doubt
Credit should be awarded for correct and relevant alternative responses which are not recorded in the mark scheme.

Section A

| Question |  |  | Marking details | Marks available |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 1 |  |  |  | $\left(1 s^{2} 2 s^{2}\right) 2 p^{6} 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{10} 4 p^{6}$ |  | 1 |  | 1 |  |  |
| 2 |  |  | Award (1) for any of following <br> +6 <br> 6 <br> $+\mathrm{VI}$ <br> VI |  | 1 |  | 1 |  |  |
| 3 | (a) |  | $K_{c}=\frac{\left[\mathrm{NO}_{2}\right]^{4}\left[\mathrm{O}_{2}\right]}{\left[\mathrm{N}_{2} \mathrm{O}_{5}\right]^{2}}$ |  | 1 |  | 1 |  |  |
|  | (b) |  | $\mathrm{mol}^{3} \mathrm{dm}^{-9}$ |  | 1 |  | 1 | 1 |  |
| 4 |  |  | 12 |  | 1 |  | 1 |  |  |
| 5 |  |  | ```6.73 (2) if answer incorrect award (1) for total relative mass of reactants as 30.02 / 30``` |  | 2 |  | 2 |  |  |
| 6 |  |  | $3 \mathrm{~K}_{2} \mathrm{CO}_{3}+2 \mathrm{AlCl}_{3}+3 \mathrm{H}_{2} \mathrm{O} \rightarrow 6 \mathrm{KCl}+2 \mathrm{Al}(\mathrm{OH})_{3}+3 \mathrm{CO}_{2}$ |  | 1 |  | 1 |  |  |

## Section B

| Question |  |  | Marking details | Marks available |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 8 | (a) |  |  | energy required to remove one electron from each atom in 1 mol of gaseous atoms of the element (2) <br> award (1) if answer missing reference to 1 mol or to gaseous atoms do not accept 'energy required to remove one electron from each atom of the element' <br> if no other credit award (1) for equation only e.g. $\mathrm{X}(\mathrm{~g}) \rightarrow \mathrm{X}^{+}(\mathrm{g})+\mathrm{e}^{-}$ | 2 |  |  | 2 |  |  |
|  | (b) |  | Indicative content <br> - visible spectrum is Balmer series <br> - transitions to $\mathrm{n}=2$ <br> - ionisation involves transition from $\mathrm{n}=1$ to $\mathrm{n}=\infty$ <br> - Lyman series corresponds to transitions to $\mathrm{n}=1$ <br> - this is in ultraviolet region of the spectrum <br> - measure frequency of the convergence limit <br> - corresponds to movement of electron from $n=1$ to $n=\infty$ <br> - $\Delta E=h f$ <br> - molar first ionisation energy given by multiplying $\Delta E$ by Avogadro's number | 4 |  | 2 | 6 |  |  |

| Question |  | Marking details | Marks available |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | AO1 | AO2 | AO3 | Total | Maths | Prac |
|  |  |  | 5-6 marks <br> Clear understanding of difference between Balmer and Lyman series; significance of convergence limit; reference to Avogadro's number The candidate constructs a relevant, coherent and logically structured method including all key elements of the indicative content. A sustained and substantiated line of reasoning is evident and scientific conventions and vocabulary is used accurately throughout. <br> 3-4 marks <br> Understanding that visible spectrum is not linked to first ionisation; transition from $\mathrm{n}=1$ to $\mathrm{n}=\infty$; reference to $E=h f$ <br> The candidate constructs a coherent account including most of the key elements of the indicative content. Some reasoning is evident in the linking of key points and use of scientific conventions and vocabulary are generally sound. <br> 1-2 marks <br> Ionisation involves transition of electron to $\mathrm{n}=\infty$; reference to convergence limit or calculation of energy from frequency <br> The candidate attempts to link at least two relevant points from the indicative content. Coherence is limited by omission and/or inclusion of irrelevant material. There is some evidence of appropriate use of scientific conventions and vocabulary. <br> 0 marks <br> The candidate does not make any attempt or give an answer worthy of credit. |  |  |  |  |  |  |

| Question |  | Marking details | Marks available |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | AO1 | AO2 | AO3 | Total | Maths | Prac |
| (c) |  |  | $\begin{align*} & \Delta E=h f=\frac{h c}{\lambda}  \tag{1}\\ & \frac{6.63 \times 10^{-34} \times 3.00 \times 10^{8}}{550 \times 10^{-9}}  \tag{1}\\ & =3.62 \times 10^{-19} \mathrm{~J} \text { per atom }  \tag{1}\\ & =218 \mathrm{~kJ} \mathrm{~mol}^{-1}  \tag{1}\\ & \text { ecf possible } \end{align*}$ |  | 4 |  | 4 | 4 |  |
| (d) | (i) | (sodium is lower than magnesium) because they are both in the same period / both have same amount of shielding (1) <br> sodium has fewer protons (1) | 2 |  |  | 2 |  |  |
|  | (ii) | (potassium is lower than sodium) because potassium is in the next period (1) <br> potassium has a bigger atomic radius / potassium has more shielding | 2 |  |  | 2 |  |  |
|  |  | Question 8 total | 10 | 4 | 2 | 16 | 4 | 0 |
