

- M1.** (a) (i) Average/mean mass of 1 atom (of an element);
Average mass of 1 atom × 12. 1
- Mass 1/12 atom of ^{12}C ;
Mass 1 atom of ^{12}C .
QWC. 1
- (ii) Other isotope = 46.0%; 1
- $$107.9 = \frac{(54 \times 107.1) + (46 \times ?)}{100};$$
- M2 whole expression.* 1
- 108.8;
Answer 108.8 (3 marks).
Answer min 1 d.p.. 1
- Same electronic configuration/ same number of electrons (in outer shell)/ both have 47 electrons;
Ignore protons and neutrons unless incorrect.
Not just electrons determine chemical properties. 1
- (b) Ionisation; 1
- high energy electrons fired at sample;
Allow electron gun /blasted with electrons. 1
- Acceleration; 1
- With electric field/accelerating potential/potential difference;
Allow by negative plate. 1
- Deflection; 1
- With electromagnet/ magnet/ magnetic field;
M2 dependent on M1.

*M4 dependent on M3.
M6 dependent on M5.*

1

- (c) (Silver) metallic (bonding);
Vdw/molecules CE=0.

1

Regular arrangement of same sized particles;

1

+ charge in each ion;

Ignore multiple positive charges.

Candidates do not need to show delocalised electrons.

1

- (d) Ionic (bonds);

1

Minimum 4 ions shown in 2D square arrangement placed Correctly;

Do not allow multiple charges on ions.

1

Further 3 ions shown correctly in a cubic lattice;

1

Strong (electrostatic) forces/bonds;

If vdw/molecules/covalent mentioned CE = 0 for M4 and M5.

1

Between + and - ions;

Accept between oppositely charged ions.

1

[20]

- M2.** (a) NaCl is ionic

1

cubic lattice

1

ions placed correctly

1

electrostatic attraction between ions

1

Covalent bonds between atoms in water	1
Hydrogen bonding between water molecules	1
Tetrahedral representation showing two covalent and two hydrogen bonds	1
2 hydrogen bonds per molecule	1
Attraction between ions in sodium chloride is very strong	1
Covalent bonds in ice are very strong	1
Hydrogen bonds between water molecules in ice are much weaker	1
Consequently, less energy is required to break the hydrogen bonds in ice to form separate water molecules than to break the ionic bonds in sodium chloride and make separate ions	1

(b)

Mark Range	Descriptor
3	<ul style="list-style-type: none"> — claims supported by an appropriate range of evidence — good use of information or ideas about chemistry, going beyond those given in the question — argument well structured with minimal repetition or irrelevant points — accurate and clear expression of ideas with only minor errors of grammar, punctuation and spelling
2	<ul style="list-style-type: none"> — claims partially supported by evidence — good use of information or ideas about chemistry given in the question but limited beyond this — the argument shows some attempt at structure — the ideas are expressed with reasonable clarity but with a few errors of grammar, punctuation and spelling
0-1	<ul style="list-style-type: none"> — valid points but not clearly linked to an argument structure

<ul style="list-style-type: none"> — limited use of information or ideas about chemistry — unstructured — errors in spelling, punctuation and grammar or lack of fluency

4 bonding electron pairs	1
and one lone pair	1
repel as far apart as possible QWC	1
lone pair - bond pair repulsion > bp—bp QWC	1
pushes S-F bonds closer together	1
shape is trigonal bipyramidal with lone pair either axial or equatorial QWC	1
angles <90	1
and < 120	1

[20]

M3.	M1	macromolecule = <u>a giant/massive/huge</u> molecule/lattice/structure with <u>covalent</u> bonding <i>(in words, not diagram)</i> <i>(not just 'very large')</i> <i>(not 'molecules bonded together'/reference to ions)</i>	1
	M2	White: IMF = van der Waals'	1
	M3	which are weak <i>(tied to 'IMF' or van der Waals' in M2)</i> <i>(if H-bonding or dipole-dipole, treat as CE, M2 = M3 = 0)</i>	1
	M4	Red: (covalent) bonds must be <u>broken/overcome</u> <i>(not weakened / loosened)</i>	1
	M5	(covalent) bonds are strong [tied to M4] Or there are many (covalent) bonds	

Or much energy is required to.

1

- If wrong bonding quoted, e.g. ionic bonding in white phosphorus or an IMF in red phosphorus, award no marks for that allotrope.
- In order for marks to be awarded for red phosphorus, the bonding must be stated to be covalent. One reference to covalent bonding is sufficient; the rest may be inferred as shown above. Thus, failure to refer to covalent bonding anywhere would result in the loss of M1, M4 and M5,
- Mark M1 independently. Allow the criteria for this mark to be earned elsewhere, but do not treat errors in the red allotrope description as contradictions of M1.

[5]

M4. (a)

(1)

(1)

[Diagrams must be complete and accurate]

2

- (b) (i) Attraction /electrostatic forces/bonds/attractions between (positive) ions/lattice and delocalised/free electrons/sea of electrons.

[Not metallic bonding]

[Not just 'forces']

1

- (ii) Electrostatic attractions/forces between ions or attractions between (oppositely charged) ions/ Na^+ & Cl^-

[Not ionic bonding]

1

- (iii) (Here) the ionic bonding in NaCl is stronger/requires more energy to break than the metallic bonding in Na

QoL Accept 'bonding/forces of attraction in NaCl is stronger than in Na'
[If IMF/molecules/van der Waals'/dipole–dipole mentioned in parts(i) or (ii), then CE = 0 for parts (i) and/or(ii) and CE = 0 for part(iii)]

1

- (c) Comparison:
 Sodium conducts **and** sodium chloride does NOT conduct
Allow 'only Na conducts'
Accept 'Na conducts, NaCl only conducts when molten'
[Do not accept sodium conducts better than sodium chloride etc.]

1

Explanation:
 (Delocalised) electrons flow though the metal

1

Allow e⁻ move/carry current/are charge carriers/transfer charge.
[Not 'electrons carry electricity']
[Not 'NaCl has no free charged particles']

Ions can't move in solid salt

1

- (d) Layers can slide over each other – idea that ions/atoms/particles move
[Not molecules]
[Not layers separate]

1

- (e) (i)
- | <u>Na</u> | <u>Cl</u> | <u>O</u> |
|-------------------|---------------------|-------------------|
| $\frac{21.6}{23}$ | $\frac{33.3}{35.5}$ | $\frac{45.1}{16}$ |

1

Hence: $\frac{0.9(39)}{1}$ $\frac{0.9(38)}{1}$ $\frac{2.8(2)}{3}$

Accept backwards calculation, i.e. from formula to % composition, and also accept route via M_r to 23; 35.5; 48, and then to 1:1:3

[If % values incorrectly copied, allow M1 only]

[If any wrong A, values/atomic numbers used = CE = 0]

1

- (ii) $3\text{Cl}_2 + 6\text{NaOH} \rightarrow 5\text{NaCl} + \text{NaClO}_3 + 3\text{H}_2\text{O}$

1
