|--------------|--|------------------------------|--|
| | <p>OR</p> $\Delta_f H(\text{MgBr}_2) - 2\Delta_{\text{at}} H(\text{Br}) - \Delta_{\text{at}} H(\text{Mg})$ $- 1\text{st IE}(\text{Mg}) - 2\text{nd IE}(\text{Mg}) - 2\Delta_{\text{ea}} H(\text{Br}) \text{ OR}$ $-525 - (2 \times 112) - 148 - 736 - 1450 - (2 \times -325) \checkmark$ <p>Lattice enthalpy = $-2433 \text{ kJ mol}^{-1} \checkmark$</p> | | <p>ALLOW ECF from incorrect answer to (ii)</p> <p>Examiner's Comments</p> <p>This Born Haber cycle combined the traditional cycle with the enthalpy solution/hydration cycle. Many candidates were successful in calculating the values from the information given and showed full working to complete the calculation. The commonest errors were not doubling the atomisation and electron affinity values (112 and 325) and not dividing the enthalpy of hydration by two.</p> <p>Some candidates did not show working or just listed numbers. Candidates should remember to provide written indications of what it is they are working out – presenting the calculations without any annotations can make it harder for error carried forward marks to be given if there is an error in their calculation. Some candidates did not produce an equation for (iii) and wrote the lattice enthalpy sum in its place.</p> |
| | <p>Total</p> | <p>7</p> | |
| <p>2 a i</p> |  | <p>4 (AO 1.2 ×4)</p> | <p>Mark each marking point independently Correct species AND state symbols required for each mark For e^-, ALLOW e For e^- only, IGNORE any state symbols added</p> <p>Examiner's Comments</p> <p>Some candidates wrote illegible state symbols where (g) and (s) were impossible to tell apart. Also, many candidates choose to write state symbols as a very small sub-script e.g. $2\text{K}_{(s)} + \frac{1}{2}\text{O}_{2(g)}$. The convention is to use lower case letters of normal size e.g. $2\text{K}(s) + \frac{1}{2}\text{O}_2(g)$</p> <p>Exemplar 1</p>  |

| | | | | |
|--|--|--|---|---|
| | | | | In this exemplar it was impossible to tell if K had (s) or (g) as a state symbol. Consequently, no marks could be given. |
| | | <p>FIRST CHECK THE ANSWER ON ANSWER LINE If answer = $-2277 \text{ (kJ mol}^{-1}\text{)}$ award 2 marks</p> <p>ii $-363 - (2 \times +89 + 249 + 2 \times 419 - 141 + 790) \checkmark$</p> <p>$-363 - 1914$ $= -2277 \checkmark \text{ (kJ mol}^{-1}\text{)}$</p> | <p>2 (AO 2.2 $\times 2$)</p> | <p>IF there is an alternative answer, check to see if there is any ECF credit possible using working below</p> <p>See list below for marking of answers from common errors</p> <p>ALLOW for 1 mark ONE mistake with sign OR use of 2 \times: $+2277$ (wrong sign) -601 (2×-419 instead of $2 \times +419$) -697 (-790 instead of $+790$) -1551 ($+363$ instead of -363) -1858 ($2 \times +419$ not used for K) -1921 (2×-89 instead of $2 \times +89$) -2152.5 or -2153 ($+249 \div 2$) -2188 ($2 \times +89$ not used for K) -2280 (rounded to 3SF) -2559 ($+141$ instead of -141)</p> <p>For other answers, check for a single transcription error or calculator error which could merit 1 mark</p> <p>Examiner's Comments</p> <p>Most candidates scored both marks. Candidates tended to forget the mole ratio of K meant its values should be multiplied by 2 in two places during this calculation.</p> |
| | | <p><i>For sodium</i> atomic radius smaller OR fewer shells \checkmark</p> <p>nuclear attraction increases OR (outer) electron(s) experience more attraction \checkmark</p> | <p>2 (AO 1.1 $\times 2$)</p> | <p>ALLOW 'Na/sodium is smaller' IGNORE smaller radius / fewer shells / less shielding if applied to ions but DO NOT ALLOW responses which refer to ions losing electrons DO NOT ALLOW molecules</p> <p>ALLOW energy levels for shells IGNORE fewer orbitals OR fewer sub-shells</p> <p>ALLOW less (electron) shielding OR electron repulsion between shells IGNORE just 'shielding'</p> <p>ALLOW more/stronger/bigger nuclear attraction etc</p> <p>IGNORE 'pull' for attraction IGNORE electrons more tightly held IGNORE 'nuclear charge' for 'nuclear attraction'</p> |

| | | | | |
|--|----|--|------------------------------|---|
| | | | | <p>IGNORE more energy (in question)</p> <p>ALLOW reverse argument for potassium throughout</p> <p>Examiner's Comments</p> <p>Candidates coped well with this question which was based on the AS part of the specification. Some candidates gave vague and unnecessarily long responses to this question.</p> |
| | ii | <p>Comparison of size of cations For sodium ions ionic radius of sodium / Na^+ is smaller ✓</p> <p>Comparison of attraction of cation and anion Na^+ has stronger attraction to O^{2-} ✓</p> | <p>2 (AO 1.2 x2)</p> | <p>comparison of IONS is essential ALLOW Na^+ has a larger charge density</p> <p>IGNORE 'Na has smaller atomic radius' but DO NOT ALLOW contradictory sentences eg 'Na+ ions have smaller atomic radius'</p> <p>IGNORE pull for attraction ALLOW 'sodium ion' and 'oxygen ion' IGNORE just 'oxygen' or just 'O' for oxygen ion</p> <p>ALLOW stronger attraction between oppositely charged ions</p> <p>Examiner's Comments</p> <p>Many candidates did not achieve full marks, often through ambiguous statements. A typical example is shown in the exemplar below.</p> <p>Exemplar 4</p> <p>It takes less energy to form the bonds in sodium oxide as opposed to potassium oxide due to its smaller ionic size making it easier for the oxygen to bond.</p> <p>The exemplar here uses the vague term 'due to its smaller ionic size'. It is unclear which of the ions the candidate is referring to (or if they're assuming that the metal oxide entity is an ion) and so they could not be given marks..</p> <p>Also, it is oxygen ions that 'bond' – the reference to oxygen bonding in the response is not specific enough.</p> |

| | | | | |

Examiner's Comments

This question was assessed by level of response (LoR). Candidates were required to process raw experimental results to determine one enthalpy change, and then to determine a second enthalpy change by constructing and using an energy cycle. Levels were determined by the accuracy of the candidates' processing, calculations and use of the energy cycle. This question discriminated extremely well.

Level 3 candidates used the mass of solution as 50.7 g with $mc\Delta T$ to obtain an energy change of 2861 J. They then divided this value by the moles of CuSO_4 that reacted (0.05 mol) to obtain the enthalpy change of $-57.22 \text{ kJ mol}^{-1}$. Finally, they constructed an energy cycle which they then used to obtain the second enthalpy change of $-65.65 \text{ kJ mol}^{-1}$.

Level 2 candidates determined the first enthalpy change but may have used the approximate mass of 50 g for the mass of solution from the experimental method. Their energy cycle was often incorrect or absent, with the second enthalpy change calculated incorrectly.

Level 1 candidates often calculated the initial energy change using $mc\Delta T$ but made little further correct progress.

A significant number of lower ability candidates used the solid mass of copper sulfate in their calculation.

Overall, mathematical skills were displayed well but some basic errors were made, particularly with subtractions. This may have been the result of mis-keying values into a calculator and believing the answer displayed. An example was the mass of the solution ($74.13 - 23.43$) being seen as 49.7 rather than 50.7.

A significant number of candidates added or subtracted the mass of copper sulfate from 50.7 or 50 for their value of m in $mc\Delta T$, using for example 57.98 and 42.72. This limited the level that they could reach.

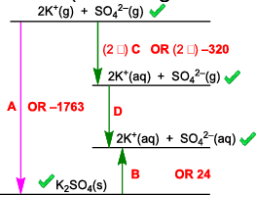

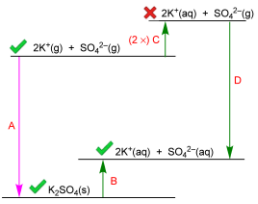

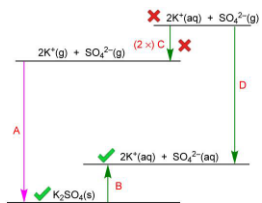

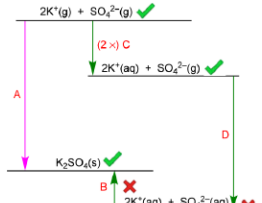

Exemplar 4 is an excellent response from a Level 3 candidate. All stages can be clearly followed, the initial energy change using $mc\Delta T$, the first enthalpy change using the

| | | | | |
|---|----|---|-------------|--|
| | | | | <p>energy change with the moles of copper sulfate, and the second enthalpy change including a clear energy cycle. Numbers are clearly shown and unrounded until the final values. This is an excellent response.</p> <p>Exemplar 4</p> $q = mc\Delta T$ $q = 50.7 \times 4.18 \times 13.5 = 2861.0017$ $= 2861.001 \text{ kJ}$ $n(\text{CuSO}_4) = \frac{7.98}{159.6} = 0.05$ $\Delta_{\text{hyd}}\text{H}(\text{CuSO}_4) = \frac{-2861.001}{0.05} = -57.22002$ $= -57.22 \text{ kJ mol}^{-1}$ $\text{CuSO}_4 + 5\text{H}_2\text{O} \rightarrow \text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ $-57.22002 \quad \quad \quad -8.43 \text{ kJ mol}^{-1}$ $\text{Cu}^{2+} + \text{SO}_4^{2-}$ <p>Additional answer space if required</p> $\Delta_{\text{rH}}(\text{reaction s.l.}) = -57.22002 - 8.43$ $= -65.65002 \text{ kJ mol}^{-1}$ $= -65.7 \text{ kJ mol}^{-1}$ |
| | ii | Temperature change = $0.2 \times \frac{100}{20} = 1.0^\circ\text{C} \checkmark$ | 1 AO 2.8 | <p>IGNORE direction of temperature change Working NOT required</p> <p>Examiner's Comments</p> <p>Just over half the candidates obtained the correct temperature change of 1°C. A common error was a temperature change of 0.5°C, the result of not considering that two temperature readings are made when calculating a temperature change.</p> |
| | | Total | 7 | |
| 4 | i | <p>(enthalpy change when)✓</p> <p>1 mole of gaseous ions react✓ OR 1 mole of hydrated/aqueous ions are formed ✓</p> <p>gaseous ions dissolve in water OR gaseous ions form aqueous/hydrated ions ✓</p> | 2 | <p>IGNORE 'energy released' OR 'energy required'</p> <p>Examiner's Comments</p> <p>Most candidates were able to state that one mole of gaseous ions was dissolved into water. Common errors seen included candidates referring to the dissolving of one mole of substance (i.e. the enthalpy change of solution); the use of the generic term 'solvent' rather than water; and dissolving of gaseous ions into one mole of water.</p> |
| | ii | | 4 | <p>Correct species AND state symbols required for each mark. (mark independently)</p> <p>On 2nd line, ALLOW $\text{Ca}^{2+}(\text{g}) + 2\text{F}^{-}(\text{aq})$ (i.e. F^{-} hydrated before Ca^{2+})</p> |

| | | | |
|--|-----|--|--|
| | | | <p>On 3rd line, ALLOW CaF₂(aq)</p> <p>DO NOT ALLOW when first seen but ALLOW ECF for '2' missing and for use of the following ions</p> <p>F⁻ F₂[✓] Ca⁺³⁺</p> <p><u>Examiner's Comments</u></p> <p>Most candidates were able to score some marks on this question with more able candidates scoring all 4 marks. Common errors included the omission of state symbols and the use of only one F⁻(g) ion (often despite a correct formula of CaF₂ being seen on the bottom line).</p> <p>For some reason, many candidates write their lower case 's' in an identical way to their lower case 'g'. This means the examiner cannot distinguish between these state symbols on such scripts. Centres may wish to stress this point to prevent candidates losing marks unnecessarily.</p> |
| | iii | <p>FIRST, CHECK THE ANSWER ON ANSWER LINE IF answer = -504 (kJ mol⁻¹) award 2 marks IF answer = -1008 (kJ mol⁻¹) award 1 mark</p> <p>-----</p> <p>$2 \times \Delta_{\text{hyd}}H(\text{F}^-)$ $= [-2630 + 13] - (-1609)$ OR $-2617 + 1609$ OR $-1008(\text{kJ mol}^{-1}) \checkmark$</p> <p>$\Delta_{\text{hyd}}H(\text{F}^-) = \frac{-1008}{2} = -504 \checkmark (\text{kJ mol}^{-1})$</p> | <p>IF alternative answer, check to see if there is any ECF credit possible using working below.</p> <p>'-' sign is needed.</p> <p>COMMON ERRORS for 1 mark:</p> <p>(+)2694: <i>signs all reversed</i> -2113: <i>sign wrong for -1609</i> -2126: <i>sign wrong for 2630</i> -517: <i>sign wrong for 13</i> +504: <i>sign wrong</i></p> <p>2 IF ALL 3 relevant values from the information at the start of Q16a(iii) have NOT been used, award zero marks unless one number has a transcription error, where 1 mark can be awarded ECF</p> <p><u>Examiner's Comments</u></p> <p>Most candidates were able to do this relatively straightforward calculation by rearranging the values of the enthalpy changes associated with the energy cycle diagram. However, a significant number forgot to divide -1008 by 2 to score full marks.</p> |

| | | | | |
|---|--------|---|-----------|---|
| | i v | <p>Correct comparison of Δ_{hyd} linked to sizes</p> <p>$\Delta_{\text{hyd}}H(\text{F}^-)$ more negative/exothermic (than $\Delta_{\text{hyd}}H(\text{Cl}^-)$) AND F^- has smaller size (than Cl^-) ✓</p> <p>Comparison of attraction between ions and water</p> <p>F^- OR smaller sized ion linked to greater attraction to H_2O ✓</p> | 2 | <p>ORA</p> <p>IGNORE 'atomic' before radius when comparing size of ions</p> <p>IGNORE charge density</p> <p>IGNORE electronegativity</p> <p>IGNORE nuclear attraction</p> <p>DO NOT ALLOW 'forms stronger hydrogen bonds with water' OR 'forms stronger van der Waals' forces with water'</p> <p>ALLOW 'forms bonds' for attraction'</p> <p>DO NOT ALLOW F^- greater attraction to H_2O if given as larger ion</p> <p>Assume 'F' / 'Fluorine' means 'ions' but DO NOT ALLOW 'F molecules'</p> <p><u>Examiner's Comments</u></p> <p>When comparing enthalpy changes candidates need to be aware that descriptions such as 'bigger' or 'smaller' are meaningless as there are often negative signs involved. The correct description required here was that the enthalpy change of hydration of F^- ions would be more negative than that of Cl^- ions. Although some candidates wrote in terms of charge density, it was those candidates who related the smaller size of the F^- ion to the difference in enthalpy change of hydration who received credit and went on to say that this was as a consequence of greater attraction to water molecules.</p> |
