

Mark scheme – Polyesters and Polyamides

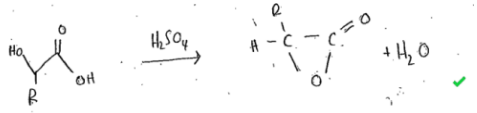

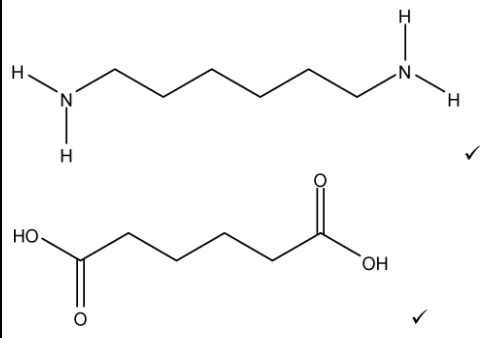

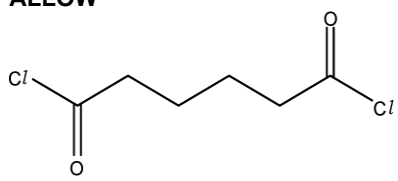

Question	Answer/Indicative content	Marks	Guidance
1	<p>Ester Amide Amine Carboxylic acid 4 groups correct ✓ ✓ ✓ 3 groups correct ✓ ✓ 2 groups correct ✓</p>	3 (AO1. 2×3)	<p>IGNORE amino acid</p> <p>ALLOW carboxyl</p> <p>IGNORE attempt to classify amide, e.g. secondary IGNORE formulae (question asks for names)</p> <p>IF > 4 functional groups are shown,</p> <ul style="list-style-type: none"> Count 4 groups max but incorrect groups first <p>IGNORE aryl OR alkyl group e.g. benzene, phenyl, aryl, arene, methyl</p>
	<p>Methanol 1 mark</p> <p>H₃C — OH ✓</p> <p> </p> <p>Both amino acids shown with NH₃⁺ ✓</p>	4 (AO2. 5×4)	<p>ALLOW any combination of skeletal OR structural OR displayed formula as long as unambiguous</p> <p>ALLOW + charge on H of NH₃ group, i.e. NH₃⁺</p> <p>If BOTH amino acids are shown with NH₃ groups (without the + charge) OR as NH₂⁺ groups, award 2 of the 3 marks for the amino acids</p> <p>If BOTH amino acids are shown as correctly balanced salts, e.g. NH₃Cl, all marks can be awarded.</p>
	<p>FIRST CHECK ANSWER ON THE ANSWER LINE If answer = 22.4 OR 22 OR 23 award 3 marks</p> <p>i n(aspartame) in 1 can = 0.167 / 294 = 5.68 x 10⁻⁴ (mol) ✓ i i n(aspartame) limit per day = 1.7x10⁻⁴ x 75 = 0.01275 (mol) ✓ number of cans = 0.01275 / 5.68 x 10⁻⁴ = 22.4 ✓</p>	3 (AO2. 2×3)	<p>If there is an alternative answer, apply ECF and look for alternative methods</p> <p>Alternative methods n(aspartame) in 1 can = 0.167 / 294 = 5.68 x 10⁻⁴ (mol) ✓ n(aspartame) per kg = 5.68 x 10⁻⁴ / 75 = 7.57 x 10⁻⁶ (mol) ✓ number of cans = 1.7 x 10⁻⁴ / 7.57 x 10⁻⁶ = 22.4 ✓ OR n(aspartame) limit per day = 1.7x10⁻⁴ x 75 = 0.01275 (mol) ✓ mass(aspartame) limit per day = 0.01275 x 294 = 3.7485 (g) ✓</p>

					number of cans = $3.7485 / 0.167$ = 22.4 ✓
			Total	10	
2	i	 <p>Ester link (must be displayed) ✓</p> <p>Rest of structure ✓</p>	2 (AO1.2) (AO2.5)	ALLOW the 'O' or C=O at either end, e.g.  IGNORE brackets IGNORE <i>n</i> End bonds' MUST be shown (solid or dotted) DO NOT ALLOW more than one repeat unit	
	i i	the ester/ ester bond/ ester group /polyester can be broken down ✓ OR It can be hydrolysed ✓	1 (AO3.2)	IGNORE references to photodegradable 'Bond breaks' is not sufficient – no reference to ester bond	
	i i i	 <p>SOCl₂ in equation ✓</p> <p>Structure of diacyl dichloride ✓</p> <p>Complete balanced equation ✓</p>	3 (AO1.1) (AO1.2) (AO2.6)	ALLOW alternative approach using PCl ₅ or PCl ₃	
		Total	6		
3		 <p>Organic product and water marked independently.</p> <p>1st mark correct organic product OR water IGNORE balancing numbers</p> <p>2nd mark BOTH products AND correctly balanced.</p>	2 (AO 3.2)	ALLOW any combination of skeletal OR structural OR displayed formula as long as unambiguous ALLOW  NOTE: For ECF , any structure must have correct number of bonds to C, H, O and N DO NOT ALLOW structure of dimer <i>Question states molecular formula = C₃H₃NO</i> Examiner's Comments Candidates were supplied with information about an unfamiliar reaction of an amino acid and asked to predict a possible equation. Many candidates suggested H ₂ O as one product, being the	

				<p>difference in the formula of the amino acid and the C_3H_3NO cyclic organic product. Any cyclic structure of C_3H_3NO that met the bonding rules for C, H, N and O was credited. Examples included a 4-membered ring lactam and substituted cyclopropenes.</p> <p>A significant number of candidates showed an equation for the reaction of two molecules of the amino acid to form 2 H_2O and a cyclic dipeptide. Although chemically feasible, the dipeptide could not be credited because the molecular formula was C_3H_3NO in the question. This error could have been avoided if the information in the question had been used.</p>
		Total	2	
4		<p>One mark for each correct structure/reagent as shown below</p> <p>compound H</p> <p>acyl chloride</p> <p>ester link ✓</p> <p>rest of structure ✓</p> <p>two repeat units of polymer I</p>	4	<p>ALLOW any combination of skeletal OR structural OR displayed formula as long as unambiguous</p> <p>ALLOW PCl_5 OR PCl_3 for reagent mark. IGNORE references to temperature for reagent mark IGNORE additional reagents shown with $SOCl_2/PCl_5/PCl_3$ e.g. H_2O, $AlCl_3$, HCl etc.</p> <p>IGNORE names (<i>question asks for structures of organic compounds and formula of reagent</i>)</p> <p>DO NOT ALLOW more than two repeat units ALLOW 1 mark for one correct repeat unit e.g.</p> <p>'End bonds' MUST be shown (do not have to be dotted)</p> <p>ALLOW the 'O' at either end i.e.</p> <p>IGNORE brackets IGNORE n</p> <p>Examiner's Comments</p> <p>Compound H was also the focus for this question. Most candidates were able to provide the structure of the acyl chloride obtained from H but only some identified $SOCl_2$ as the correct reagent. Common incorrect reagents included HCl and $AlCl_3$. Most candidates recognised that polymer I was a polyester but only some were able to draw two repeat units correctly. Candidates are advised to</p>

				practice drawing different polymers, taking care to ensure the correct number of repeat units are present when a specific number is required.
			Total	4
5			<p>  </p> <p>  </p> <p>i.e. one mark for each group hydrolysed</p>	<p>ALLOW any combination of skeletal OR structural OR displayed formula as long as unambiguous</p> <p>IGNORE NH₃ (<i>question asks for organic products</i>)</p> <p>ALLOW –COO[–] OR –COONa</p> <p>DO NOT ALLOW negative charge on C atom DO NOT ALLOW –COO–Na (covalent bond) BUT ALLOW ECF if seen in subsequent structures</p> <p>DO NOT ALLOW COOH in this structure DO NOT ALLOW (sodium) salt of alcohol group i.e.</p> <p>  </p> <p>ALLOW COOH groups in this structure i.e. award 2 marks for</p> <p>  </p> <p>IGNORE small slip in carbon chain</p> <p>Examiner's Comments</p> <p>This question required candidates to apply their knowledge of amide hydrolysis to a section of protein. Many candidates correctly recognised that two amino acids would be produced but not all took account of the alkaline conditions and showed COOH groups rather than carboxylates. Candidates found this question difficult and although many gained some credit only the highest ability candidates, who recognised the amide in the side-chain would also react, scored</p>

				<p>full marks after. Exemplar 3 shows a good response.</p> <p>Exemplar 3</p>  <p>This response has correctly identified the amino acid on the left hand side of the amide link and also shown this as a carboxylate. Consequently the first mark has been achieved. The right hand amino acid has also been identified correctly. However, the amide in the R group has not been hydrolysed so this response only scores one of the two marks available for this product. Notice the candidate has presented their structures clearly with the atoms drawn in a similar arrangement to the protein shown in the question. This is a good strategy to avoid errors and omissions when drawing organic structures.</p>
		Total	3	
6	i	<p>Equation</p> $2\text{HOCH(R)COOH} + \text{Mg} \rightarrow (\text{HOCH(R)COO})_2\text{Mg} + \text{H}_2$ <p>Organic product ✓</p> <p>Balance ✓</p> <p>Type of reaction</p> <p>Redox ✓</p>	3	<p>ALLOW correct structural OR skeletal OR displayed formula OR mixture of the above as long as non- ambiguous</p> <p>ALLOW $2\text{HOCH(R)COOH} + \text{Mg} \rightarrow 2\text{HOCH(R)COO}^- + \text{Mg}^{2+} + \text{H}_2$</p> <p>ALLOW multiples</p> <p>IGNORE poor connectivity to OH groups <i>Given in question</i></p> <p>Examiner's Comment: Candidates found this part difficult and the problem presented many opportunities for errors. Many candidates tried to show charges for the salt formed but often the 2+ charge was missing on Mg^{2+} or Mg^+ was shown. The balanced equation required a balancing 2 before compound A but this was often omitted. Candidates using skeletal formulae fared better than attempts to show</p>

					structural formulae such as HOCHR ₂ COOH, with many omitting the H atom from CHR. Few candidates identified the reaction as redox, with many giving neutralisation instead.
		i i	<p>Equation</p> $2\text{HOCH(R)COOH} \longrightarrow \text{cyclic dimer} + 2\text{H}_2\text{O}$ <p>Organic product ✓</p> <p>Balance ✓</p> <p>Type of reaction Condensation OR esterification ✓</p>	3	<p>ALLOW correct structural OR skeletal OR displayed formula OR mixture of the above as long as non-ambiguous</p> <p>ALLOW 1 mark of the 2 equation marks for formation of '3 ring' with balanced equation:</p>  <p>ALLOW condensation polymerisation ALLOW addition-elimination</p> <p>IGNORE elimination IGNORE dehydration</p> <p>Examiner's Comment: As with 4(b)(ii), candidates found this question difficult. It was not often that the dimer was seen but, when it was, the structure was usually correct. Balancing required 2H₂O and the balancing 2 was often omitted.</p> <p>In contrast with 4(b)(i), many more candidates identified the type of reaction, here condensation or esterification.</p>
			Total	6	
7	a	i		2	<p>ALLOW any combination of skeletal OR structural OR displayed formula as long as unambiguous ALLOW</p>  <p>Examiner Comments All but the weakest candidates scored two marks for the two monomers that could be used to produce Nylon 6,6.</p>
		i i	<p>$(n = \frac{21500}{226} =) 95 \text{ (repeat units)}$ ✓</p>	1	<p>MUST be a whole number. DO NOT ALLOW an answer that uses an incorrect molar mass in the working. ALLOW 96</p> <p>Examiner Comments This was a fairly simple calculation where candidates were expected to divide the relative molecular mass of the polymer by the relative</p>

				<p>molecular mass of a single repeat unit (226) to establish the number of repeat units present in the polymer. Many candidates obtained the correct answer. Those that did not gain credit made a simple error in their calculation of the relative molecular mass of the repeat unit.</p> <p>Answer 95</p>
				<p>ANNOTATE ANSWER WITH TICKS AND CROSSES</p> <p>Curly arrow must come from lone pair on C of CN^- OR CN^- OR from minus sign on C of CN^- ion (then lone pair on CN^- does not need to be shown)</p> <p>IGNORE NaCl</p> <p>ALLOW $\text{S}_{\text{N}}1$ mechanism:</p> <p>Dipole shown on C–Cl bond, $\text{C}^{\delta+}$ and $\text{Cl}^{\delta-}$, AND curly arrow from C–Cl bond to Cl atom ✓</p> <p>Correct carbocation AND curly arrow from CN^- to carbocation. Curly arrow must come from lone pair on C of CN^- OR CN^- OR from minus sign on C of CN^- ion (then lone pair on CN^- does not need to be shown) ✓ correct organic product AND Cl^- ✓</p> <p>2</p> <p>Examiner Comments</p> <p>The mechanism for the reaction of 1-chloropropane was well done with the majority of candidates scoring two or three of the marks. Marks were not awarded when candidates used a negative charge or a lone pair sited on the nitrogen as the starting point for a curly arrow in the first stage of the reaction mechanism. The final marking point was awarded for the production of a Cl^- ion. The placing of curly arrows, dipoles and lone pairs of electrons are important when communicating by mechanisms.</p>
				<p>curly arrow from CN^- to carbon atom of C–Cl bond ✓</p> <p>Dipole shown on C–Cl bond, $\text{C}^{\delta+}$ and $\text{Cl}^{\delta-}$, AND curly arrow from C–Cl bond to Cl atom ✓</p> <p>correct organic product AND Cl^- ✓</p> <p>b i</p> <p>3</p> <p>Compound G</p> <p>i i</p> <p>ALLOW any combination of skeletal OR structural OR displayed formula as long as unambiguous</p> <p>IGNORE name(s)</p> <p>ALLOW</p> <p>$\text{H}-\text{C}(\text{OH})-\text{Br}$ $\text{H}-\text{C}(\text{OH})-\text{I}$ $\text{H}-\text{C}(\text{OH})-\text{Cl}$</p>

		<p>Reagents Reaction 2: H_2 AND Ni ✓</p> <p>Reaction 3: Correct formula of an aqueous acid e.g. HCl(aq)/$\text{H}_2\text{SO}_4\text{(aq)}$ ✓</p>		<p>ALLOW any suitable metal catalyst e.g. Pt ALLOW LiAlH_4 for reagent in reaction 2 DO NOT ALLOW NaBH_4 for reagent in reaction 2 IGNORE names (<i>question asks for formulae</i>) IGNORE references to temperature and/or pressure</p> <p>ALLOW $\text{H}^+\text{(aq)}$ IGNORE dilute ALLOW formula of an acid AND water</p> <p>e.g. HCl AND H_2O H_2SO_4 AND H_2O</p> <p>Examiner Comments Although many candidates were able to provide the structure of methanal as the starting material for this synthesis, the structures of chloromethanol, bromomethanol and iodomethanol were accepted as suitable alternatives. It should be noted that hydrolysis is carried out using aqueous acid and that dilute acid is not a suitable alternative.</p>
	i i i	<p>Explanation</p> <p>Nitrogen electron pair OR nitrogen lone pair AND accepts a proton / H^+ ✓</p> <p>Structure of salt</p> <pre> OH H H — C — C — NH₃⁺ H H </pre> <p>AND Cl^- ✓</p>	2	<p>IGNORE NH_2 group donates electron pair</p> <p>ALLOW nitrogen donates an electron pair to H^+ DO NOT ALLOW nitrogen donates lone pair to acid IGNORE comments about the O in the $-\text{OH}$ group</p> <p>Compound H is a base is not sufficient (<i>role of lone pair required</i>)</p> <p>DO NOT ALLOW nitrogen/N lone pair accepts hydrogen (<i>proton/H^+ required</i>)</p> <p>ALLOW any combination of skeletal OR structural OR displayed formula as long as unambiguous ALLOW</p> <pre> OH H H — C — C — NH₃Cl H H </pre> <p><i>i.e. charges not required</i></p> <p>IF charges are shown both need to be present ALLOW charge either on N atom or NH_3^+</p> <p>IF displayed then + charge must be on the nitrogen</p> <p>Examiner Comments Only 20% of candidates were awarded both marks for this question. The commonest error was a failure to state that the N atom has a lone pair of electrons that can gain a proton. Answers stating</p>

					that amines accept protons or that a salt is produced when an acid reacts with a base were not credited. Where a full displayed structure is given the positive charge must be shown on the nitrogen atom, although -NH_3^+ is acceptable. As the question required the formula of the salt, the Cl^- had to be included.
		i v	 <p>Ester link ✓</p> <p>Rest of structure✓</p> <p>(polymer J is biodegradable because) the ester / ester bond / ester group / polyester can be hydrolysed✓</p>	3	<p>ALLOW any combination of skeletal OR structural OR displayed formula as long as unambiguous</p> <p>DO NOT ALLOW more than two repeat units for second marking point.</p> <p>'End bonds' MUST be shown (do not have to be dotted)</p> <p>IGNORE brackets</p> <p>IGNORE n</p> <p>Broken down by water is not sufficient</p> <p>IGNORE references to photodegradable</p> <p>Examiner Comments</p> <p>The most common mark for this question was two out of the three marks available, with candidates giving a correct structure of the polymer but failing to express that the polymer was biodegradable due the ability of the ester functional group to undergo hydrolysis.</p>
			Total	14

M5 Compound G**OR**

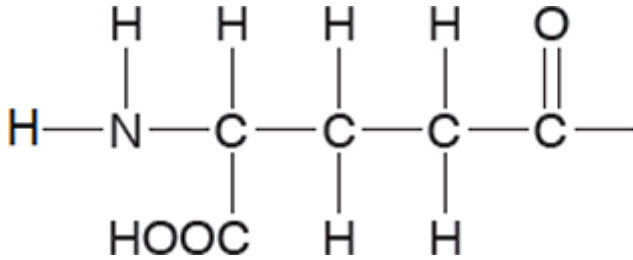

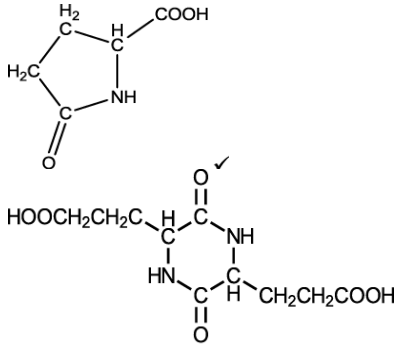

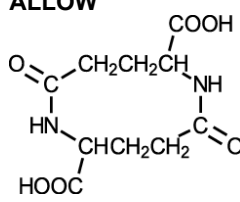

Is an addition polymer ✓

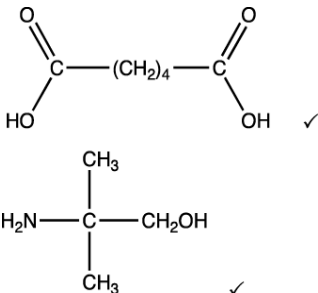

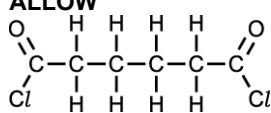

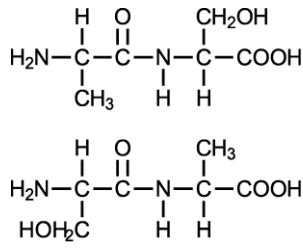

M6 Compound H**OR**

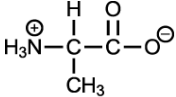

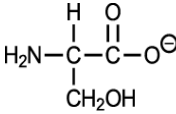

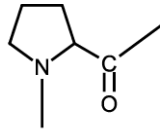

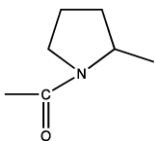

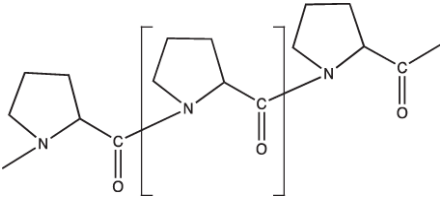

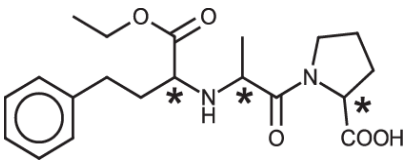

is a condensation polymer ✓

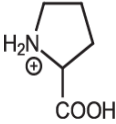

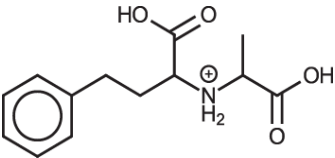

ALLOW ECF from $\text{NH}_2\text{CH}_2\text{CH}=\text{CHCOOH}$ for the formation of compound G or compound H**ALLOW** alkene forms addition polymer / polymer with same empirical formula as monomer**ALLOW** equation for reaction**ALLOW** amino acid forms condensation polymer**OR** (molecules of) compound **F** join / bond / add / react / form polymer and water / small molecule**ALLOW** equation for reaction**Examiner's Comments**

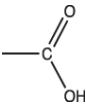

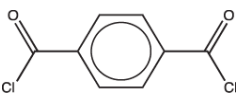

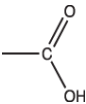

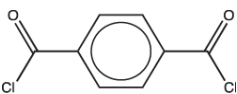

This question discriminated well and many well organised and well-presented answers were seen. Candidates were usually able to identify the aldehyde structure in compound **E** and those who failed to include a chiral centre in compound **E** had possibly missed essential information in the stem of the question. However, they could still score marks for the polymer structures by the application of error carried forward. Some candidates correctly identified the four structures but then missed the last two marks for a description of how the polymers are formed. Although labels were not required to score marks for the four structures, the description of the formation of the polymers had to be linked to the correct structure or the correctly labelled compound and some candidates lost marks here because their description was linked to the wrong polymer.

	b i	 <p>✓</p>	1	<p>ALLOW correct structural OR displayed OR skeletal formulae OR a combination of above as long as unambiguous</p> <p>Examiner's Comments</p> <p>The majority scored this mark for the structure of glutamic acid.</p>
	i i	 <p>✓</p>	2	<p>ALLOW correct structural OR displayed OR skeletal formulae OR a combination of above as long as unambiguous</p> <p>ALLOW a cyclic amide with a 3 membered ring</p> <p>ALLOW</p>  <p>OR a structure obtained by condensation of a glutamic acid molecule with the first cyclic amide</p> <p>Examiner's Comments</p> <p>Marks were awarded for a variety of structures and although few candidates scored both marks here, examiners were impressed by the excellent attempts to produce workable cyclic structures.</p>
	c i	<p>Ester AND amide ✓</p>	1	<p>ALLOW peptide for amide</p> <p>Examiner's Comments</p> <p>Identification of functional groups in polymers seemed to be an area of weakness. Many candidates correctly named one of the functional groups but both were required for the mark. Examples of incorrect responses included amine, carboxylic acid, alcohol and ketone.</p>

		i i		2	<p>ALLOW correct structural OR displayed OR skeletal formulae OR a combination of above as long as unambiguous</p> <p>Functional groups do not need to be fully displayed</p> <p>ALLOW structures as shown; the O–H bond and the N–H bonds in the functional groups do not need to be displayed</p> <p>DO NOT ALLOW -COOH</p> <p>ALLOW</p>  <p>Penalise incorrect connectivity to OH once in this question</p> <p>Examiner's Comments</p> <p>The question asked for the functional groups to be displayed in the structures of the monomers. Most candidates scored well here but this was only possible because the mark scheme did not require the functional groups to be fully displayed.</p>
		i i i	(The molecule / amide / ester) can be hydrolysed ✓	1	<p>ALLOW (the molecule / amide / ester) can form hydrogen / Hbonds with water</p> <p>IGNORE acid / base</p> <p>Examiner's Comments</p> <p>A well answered question with marks equally divided between answers that either suggested that the polymer can be hydrolysed or that the polymer can form hydrogen bonds with water. A statement that the polymer is soluble in water was not sufficient to score the mark.</p>
			Total	13	
1 3		a i		2	<p>ALLOW correct structural OR displayed OR skeletal formulae</p> <p>OR combination of above as long as unambiguous</p> <p>DO NOT ALLOW peptide chains</p> <p>Examiner's Comments</p> <p>Many correct dipeptide structures were seen. Common errors included peptide chains and including extra oxygen atoms in the amide link.</p>
		i i	alanine at pH 6.0	2	<p>ALLOW correct structural OR displayed OR skeletal formulae</p> <p>OR combination of above as long as unambiguous</p>

		 serine at pH 10.0 		<p>ALLOW + charge on N or H: <i>i.e.</i> $^+\text{NH}_3$ or NH_3^+</p> <p>DO NOT ALLOW '—' charge on C <i>i.e.</i> ^-COO</p> <p>DO NOT ALLOW if structure is incomplete</p> <p>Examiner's Comments</p> <p>Most candidates gave the correct structure for the alanine zwitterion. Common errors include the protonation of the amine group and the ionisation of the alcohol group in serine.</p>
	i i i	 OR 	1	<p>ALLOW correct structural OR displayed OR skeletal formulae</p> <p>OR combination of above as long as unambiguous</p> <p>IGNORE bond angles</p> <p>DO NOT ALLOW more than one repeat unit</p> <p>ALLOW end bonds shown as - - - -</p> <p>DO NOT ALLOW if structure has no end bonds</p> <p>IGNORE brackets unless they are used to pick out the repeat unit from a polymer chain</p> <p>IGNORE n</p>  <p>Examiner's Comments</p> <p>This question proved to be a difficult challenge for many. Extra oxygen atoms or two repeat units were occasionally seen.</p>
	b i		1	<p>ALL correct for one mark</p> <p>Examiner's Comments</p> <p>This part was answered well by many candidates. Some missed the chiral centre on the proline moiety or added an asterisk to a carbonyl carbon.</p>
	i i	<p>any two from:</p> <p>no / fewer side effects</p>	2	<p>IGNORE toxic / harmful</p>

		<p>increases the (pharmacological) activity / effectiveness</p> <p>Reduces / stops the need for / cost / difficulty in separating stereoisomers / optical isomers</p> <p style="text-align: right;">✓✓</p>		<p>IGNORE a response that implies a reduced dose</p> <p>IGNORE "it takes (less) time to separate"</p> <p>Examiner's Comments</p> <p>Most candidates gained this mark by stating that the use of a single stereoisomer results in fewer side effects and increased pharmacological activity. Vague answers and comments about a reduced dose did not score marks.</p>
	i i i	<div style="display: flex; justify-content: space-around;"> <div>  <p>✓ one mark for ethanol</p> </div> <div>  <p>✓ one mark for proline with NH OR NH₂⁺</p> </div> </div> <div style="text-align: center;">  </div> <div style="display: flex; justify-content: space-around; margin-top: 20px;"> <div> <p>with</p>  </div> <div> <p>or</p>  </div> </div> <p>✓ one mark for remaining fragment</p> <p>✓ Fourth mark for structure of both ions shown correctly with NH₂⁺</p>	4	<p>ALLOW correct structural OR displayed OR skeletal formulae</p> <p>OR combination of above as long as unambiguous</p> <p>ALLOW + charge on H of NH₂ groups, <i>i.e.</i> NH₂⁺</p> <p>IGNORE negative (counter) ions</p> <p>Examiner's Comments</p> <p>This question discriminated well. Most candidates were able to score one mark for the formula of ethanol. Only a small number of able candidates scored full marks for including the correct formulae for the protonated amine groups formed during acid hydrolysis.</p>
	i v	<p>idea of separating (the components / compounds)</p> <p>AND idea of (identifying compounds by) comparison with a (spectral) database</p> <p style="text-align: right;">✓</p>	1	<p>ALLOW (identifies compounds) using fragmentation (patterns) / fragment ions (but IGNORE molecular ions)</p> <p>IGNORE retention times</p> <p>Examiner's Comments</p> <p>To get the mark for this question candidates had to include points about the separation of the mixture and identification of the compounds. Answers based on identification using retention times or measurement of molar mass did not score the mark.</p>
