

- 1 (a) Methanol can be made from a mixture of carbon monoxide and hydrogen.

The forward reaction is exothermic.

- (i) Explain why the concentration of methanol at equilibrium does not change.

.....  
.....  
..... [2]

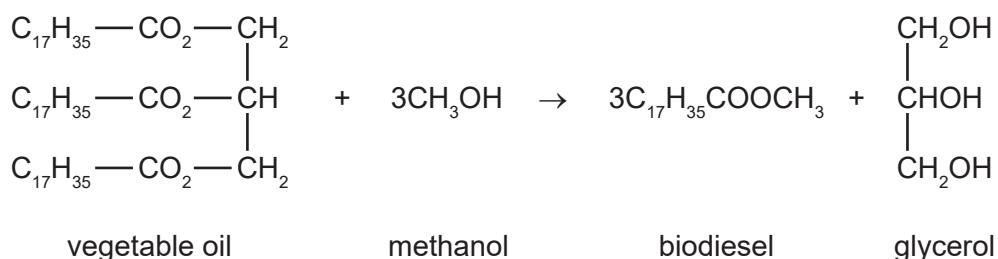

- (ii) Suggest conditions, in terms of temperature and pressure, which would give a high yield of methanol.

.....  
.....  
..... [2]

- (iii) How would the conditions used in practice compare with those given in (ii)? Give an explanation of any differences.

.....  
.....  
..... [2]

- (b) Biodiesel is made from a vegetable oil by the following reaction.

- (i) What type of compound are vegetable oil and biodiesel?

..... [1]

- (ii) What other useful product is made from vegetable oil by heating it with aqueous sodium hydroxide?

..... [1]

- (iii) Suggest an explanation why making and using biodiesel has a smaller effect on the percentage of carbon dioxide in the atmosphere than using petroleum-based diesel.

.....  
..... [2]

- (c) Petroleum-based diesel is a mixture of hydrocarbons, such as octane and octene.
- (i) 'Oct' means eight carbon atoms per molecule. Draw a structural formula of an octene molecule.

[1]

- (ii) Describe a test which would distinguish between octane and octene.

test .....

result with octane .....

result with octene ..... [3]

[Total: 14]

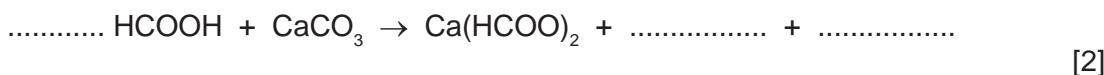

2 Methanoic acid is the first member of the homologous series of carboxylic acids.

- (a) Give **two** general characteristics of a homologous series.

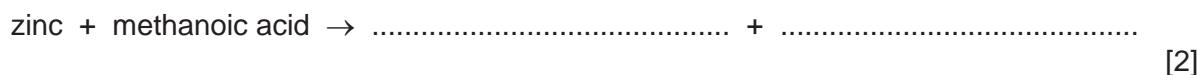

.....  
.....  
..... [2]

- (b) In some areas when water is boiled, the inside of kettles become coated with a layer of calcium carbonate. This can be removed by adding methanoic acid.

- (i) Complete the equation.

- (ii) Methanoic acid reacts with most metals above hydrogen in the reactivity series.  
Complete the word equation.

- (iii) Aluminium is also above hydrogen in the reactivity series.  
Why does methanoic acid not react with an aluminium kettle?

..... [1]

- (c) Give the name, molecular formula and empirical formula of the fourth acid in this series.

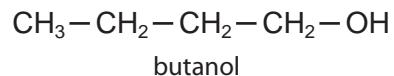

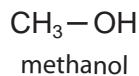

name ..... [1]

molecular formula ..... [1]

empirical formula ..... [1]

[Total: 10]

- 3 The alcohols form a homologous series. The first member is methanol and the fourth is butanol.

- (a) Give **two** general characteristics of a homologous series.

.....  
.....  
.....

[2]

- (ii) Calculate the mass of one mole of the C<sub>8</sub> alcohol.

.....  
.....

[2]

- (b) Give the name and structural formula of the third member of this series.

name .....

[1]

structural formula

[1]

- (c) The structural formula of the fifth member, pentan-1-ol, is drawn below.

- (i) Draw the structural formula of an isomer of this alcohol.

[1]

(ii) Predict the names of the product(s) formed when pentan-1-ol

- reacts with an excess of oxygen,

..... and ..... [1]

- is dehydrated to form an alkene,

..... [1]

- is oxidised by acidified potassium dichromate(VI).

..... [1]

4 Alkenes are unsaturated hydrocarbons. They show structural isomerism. Alkenes take part in addition reactions and form polymers.

- (a) Structural isomers have the same molecular formula but different structural formulae. Give an example of structural isomerism.

molecular formula .....

two structural formulae

[3]

- (b) Ethene reacts with each of the following. Give the name and structural formula of each product.

- (i) steam

name of product .....

structure of product

[2]

- (ii) hydrogen

name of product .....

structure of product

[2]

(c) Alkenes polymerise by addition.

(i) Explain the term *polymerise*.

.....  
.....

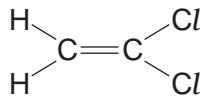

[2]

(ii) What is the difference between addition polymerisation and condensation polymerisation?

.....  
.....

[2]

(iii) Poly(dichloroethene) is used extensively to package food. Draw its structure. The structural formula of dichloroethene is drawn below.

[2]

(d) Steel may be coated with another metal, eg zinc or chromium, or with a polymer, eg poly(chloroethene), to prevent rusting.

(i) Suggest a property of poly(chloroethene) that makes it suitable for this purpose.

.....

[1]

(ii) Explain why the steel will rust when the protective coating of chromium or polymer is broken.

.....

[1]

(iii) When the protective layer of zinc is broken, the steel still does not rust.  
Suggest an explanation.

.....  
.....  
.....

[2]
