| 1 | A student carries out an investigation to compare the reactivities of four metals, |
|---|--|
| | aluminium, copper, zinc and M. |

He adds strips of zinc to the aqueous solutions of the nitrates of each metal.

After a few minutes he removes the strips of zinc and examines them.

The table shows his results.

| Solution | Result |
|--------------------|-----------------------|
| aluminium nitrate | no change |
| copper(II) nitrate | brown coating on zinc |
| zinc nitrate | no change |
| nitrate of metal M | grey coating on zinc |

| (a) Name the substance that causes the brown coating on the zinc. | (1) |
|--|-----|
| (b) State why there is no change in the experiment with zinc nitrate solution. | (1) |
| | |

(c) The student repeats the experiment with strips of metal M instead of strips of zinc. The table shows his results.

| Solution | Result |
|--------------------|--------------------|
| aluminium nitrate | no change |
| copper(II) nitrate | brown coating on M |
| zinc nitrate | no change |
| nitrate of metal M | no change |

Using information from both tables of results, place the metals aluminium, copper, zinc and M in order of decreasing reactivity.

| most reactive | |
|----------------|--|
| | |
| | |
| least reactive | |

| | this reaction. | (2) |
| (i | ii) Explain, in terms of electrons, which species is behaving as an oxidising agent i | n |
| | | |
| | | (1) |
| (i | State why this reaction is described as a redox reaction. | (1) |
| | $Mg(s) + 2Ag^{+}(aq) \rightarrow Mg^{2+}(aq) + 2Ag(s)$ | |
| Т | he reaction can be represented by the ionic equation | |
| (u) iv | lagnesium reacts with an aqueous solution of silver nitrate. | |

2 The table gives information about barium salts.

| Barium salt | Formula | Solubility in water | Toxic (poisonous) |
|------------------|-----------------------------------|---------------------|-------------------|
| barium chloride | | soluble | yes |
| barium nitrate | Ba(NO ₃) ₂ | soluble | yes |
| barium carbonate | | insoluble | no |
| barium sulfate | BaSO ₄ | insoluble | no |

| | barium sulfate | BaSO ₄ | insoluble | no | | |
|-----|---|-----------------------|---|-----|---|--|
| | (a) Complete the table by giving the formula of barium chloride and of barium carbonate. (2) | | | | | |
| | (b) The human stomach | contains hydrochloric | acid. | | | |
| | Suggest why barium carbonate may cause poisoning when it enters the stomach. (2) | | | | | |
| | | | | | , | |
| | (c) Before patients have stomach X-rays they are given a barium salt to swallow. | | | | | |
| | Which salt in the table is safe to use? | | | | | |
| | | | | (1) | | |
| | (d) A student accidentally swallowed a small amount of barium hydroxide solution, which is poisonous. | | | | | |
| | | _ | sium sulfate could be give word equation for the re | | | |
| | | | | (3) | | |
| Rea | Reason | | | | | |
| | | | | | | |
| | | | | | | |
| Woı | Word equation | | | | | |

(e) The table gives information about the first five elements in Group 2 of the Periodic Table.

| Element | Atomic number | Reaction with cold water | Reaction with air |
|-----------|---------------|--------------------------|--------------------------------|
| beryllium | 4 | no reaction | burns when strongly heated |
| magnesium | 12 | reacts very slowly | burns when heated |
| calcium | 20 | reacts slowly | reacts slowly without heating |
| strontium | 38 | reacts quickly | reacts quickly without heating |
| barium | 56 | | |

Use the information in the table to help you answer the questions.

(i) Suggest how barium reacts with cold water and with air.

| Reaction with cold water | (2) |
|---|-------|
| Reaction with air | |
| (ii) Use your answer to (e)(i) to suggest how barium should be stored. | (1) |
| (iii) Suggest a connection between the atomic number and the reactivity of the elements in Group 2. | (1) |
