Question number	Answer	Additional guidance	Mark
1(a)	An explanation that combines identification via a judgement (1 mark) to reach a conclusion via justification/reasoning (1 mark): • a negative ion must have more electrons than protons in the particle (1) • therefore Z will have a 2– charge (1)	Do not allow any comparison involving neutrons.	(2)

Question number	Answer	Additional guidance	Mark
1 (b)	40 + 2 × (14 + 16 × 3) (1) = 164 (1)	Award full marks for correct numerical answer without	
		working.	(2)

Question number	Answer	Mark
1 (c)	Li ion with empty outer shell (1)	
	1+ charge on Li (1)	
	8 electrons on outer shell of F (1)	
	• 1– charge on F (1)	(4)

Question Number	Answer	Acceptable answers	Mark
2(a)	D: Ca(NO ₃) ₂		(1)

Question Number	Answer	Acceptable answers	Mark
2 (b)	C: 8		(1)

Question Number	Answer	Acceptable answers	Mark
2 (c)	Description including four of the following	Marks can be gained using diagrams	(4)
	sodium - 2.8.1 / 1 electron in outer shell (1) sodium (atoms) lose electrons (1) one per atom (1) (forms) Na $^+$ (1) sulphur - 2.8.6 / 6 electrons in outer shell (1) sulfur (atoms) gain electrons (1) two per atom (1) (forms) S $^{2-}$ (1) two sodium atoms / ions combine with one sulfur atom / ion (1) formula is Na $_2$ S (1)	mention of shared electrons / covalent bonding in words or diagram = max 2 marks	

Questi		Indicative Content	Mark
Numbe		A description including some of the falleuties regists	
QWC	*2(d)	solid {regular arrangement/ lattice} (of ions) sodium/Na ⁺ ions chloride /Cl ⁻ ions (held together by) strong (ionic) bonds strong (electrostatic) forces of attraction between oppositely charged ions / positive and negatively charged ions closely packed together (when solid) does not conduct because ions cannot move molten heat energy {overcomes/breaks} (strong ionic) bonds strong (electrostatic) forces of attraction between oppositely charged ions / positive and negatively charged ions ions can move (therefore) conducts when molten	(6)
Leve I	0	No rewardable content	
1	1 - 2	a limited explanation e.g. does not conduct when solid e.g. does conduct when molten the answer communicates ideas using simple language and limited scientific terminology spelling, punctuation and grammar are used with limited accuracy	d uses
2	3 - 4	a simple explanation e.g. does not conduct when solid, does conduct when molten because { ions / particles / atoms} can move the answer communicates ideas showing some evidence of and organisation and uses scientific terminology appropriately spelling, punctuation and grammar are used with some according to the conduct when solid, does not conduct when molten because { ions / particles / atoms} can move the answer communicates ideas showing some evidence of and organisation and uses scientific terminology appropriately spelling, punctuation and grammar are used with some according to the conduction of the conduction of the conduction and uses scientific terminology appropriately spelling, punctuation and grammar are used with some according to the conduction of the conduct	e clarity
3	5 - 6	a detailed explanation e.g. solid has strong ionic bonds (be oppositely charged ions), does not conduct when solid because io cannot move, does conduct when molten because ions can move the answer communicates ideas clearly and coherently use range of scientific terminology accurately spelling, punctuation and grammar are used with few error	es a

Question Number	Answer		Acceptable answers	Mark
3(a)(i)	particle	number	11	(2)
	proton	29]	
	neutron	34		
	electron	29		
	all 3 correct (2) any 1 or 2 correct	et (1)		

Question Number	Answer	Acceptable answers	Mark
3(a)(ii)	(copper atom has) 4 (shells of electrons)	Do not allow 4 electrons on the outer shell Do not allow 4 outer shells	(1)

Question Number	Answer	Acceptable answers	Mark
3(a)(iii)	An explanation linking	Maximum (1) if no mention of atom(s)/atomic	(2)
		Allow the marks if a specific example is given e.g. all chlorine atoms have 17 protons (1) but some have 18 neutrons and others have 20 neutrons (1)	
	 atoms of the (same) element/ atoms with the same {number of protons/atomic number} (1) 	Ignore any reference to numbers of electrons Ignore different forms of an element	
	(but) different {numbers of neutrons/mass numbers} (1)	Allow {more/less} neutrons than the {usual/original} atom (1) Do not allow more neutrons than protons Do not allow different (relative) atomic masses	

Question Number	Answer	Acceptable answers	Mark
3(a)(iv)	• (in 100 atoms)	63.6 with no working (3)	(3)
	mass of copper-63 atoms =	(0.7//	
	63 x 70 / 63 x 0.7 / 63 x 7 (1) (= 4410 / 44.1 / 441)	63.5/64 with no working (0)	
		Allow correct working shown to	
	• mass of copper-65 atoms =	calculate 63.6 then final answer is	
	65 x 30 / 65 x 0.3 / 65 x 3 (1) (= 1950 / 19.5 / 195)	rounded to 64 (3)	
		Note: correct working shown to	
	• relative atomic mass =	calculate 63.6 then final answer is	
	(63 x 70 + (65 x 30) / 4410 + 1950	incorrectly rounded to 63.5/63 (2)	
	100 100	Ignore any unit e.g. g	
	44.1 + 19.5/ <u>441+ 195</u> (1) (=		
	63.6)	Allow TE for third mark	
	10	e.g if percentages used the wrong way round 64.4 scores (1)	

Question Number	Answer	Acceptable answers	Mark
3(b)(i)		Reject any reference to a covalent bond or sharing electrons (0)	(2)
	• two electrons/ 2e ⁽⁻⁾ (1)	Cu \rightarrow Cu ²⁺ + 2e ⁽⁻⁾ or Cu - 2e ⁽⁻⁾ \rightarrow Cu ²⁺ (2) Allow +2 for charge	
	• {loses/gives away} electrons (1)	Allow transfers electrons to another atom (1) Allow electrons taken away (1) Ignore electrons are missing Ignore references to the nitrate ion/other non-metals Ignore references to full outer shell	

Question	Answer	Acceptable answers	Mark
Number			
3(b)(ii)	Cu(NO ₃) ₂	Formula must be totally correct including subscripts, letter case and brackets	(1)
		Allow Cu ²⁺ (NO ₃ ⁻) ₂ Ignore any balancing numbers in front of formula Ignore any working/attempted equation to find the formula
