

Question Number	Answer	Acceptable answers	Mark
1(a)	Any two from the following: <ul style="list-style-type: none"> • fuels can be in different states / specific example • different sized molecules(1) • different viscosities (1) • different boiling point / vaporisation temperatures (1) • different ease of ignition /some fuels more flammable (1) • different amounts of air / oxygen needed (1) 	different { thickness/runniness} some burn easier than others	(2)

Question Number	Answer	Acceptable answers	Mark
1(b)	C		(1)

Question Number	Answer	Acceptable answers	Mark
1(c)	$2\text{C}_2\text{H}_6 + 7\text{O}_2 \rightarrow 4\text{CO}_2 + 6\text{H}_2\text{O}$ <ul style="list-style-type: none"> • reactant formulae (1) • product formulae (1) • balancing correct formulae (1) 	Ignore state symbols balancing multiples	(3)

Question Number		Indicative Content	Mark
QWC	*1(d)	<p>An evaluation including some of the following:</p> <p>Advantages</p> <ul style="list-style-type: none"> • plenty of water / raw material • limited supplies of crude oil • hydrogen produces only water as waste • petrol produces carbon dioxide • carbon dioxide (emissions) may cause global warming <p>Disadvantages</p> <ul style="list-style-type: none"> • hydrogen has to be produced • requires energy / electricity to produce it • producing electricity from non-renewable sources produces carbon dioxide • expensive to produce • problems of storage of large volumes of flammable gas • stronger / heavier / bigger tanks needed • hydrogen a gas, petrol a liquid, hydrogen leaks more likely • limited outlets / conversion costs • shorter distance between refuelling 	(6)
Level	0	No rewardable content	
1	1 - 2	<ul style="list-style-type: none"> • a limited description e.g. using petrol produces carbon dioxide which is a greenhouse gas. The only waste product from hydrogen is water • the answer communicates ideas using simple language and uses limited scientific terminology • spelling, punctuation and grammar are used with limited accuracy 	
2	3 - 4	<ul style="list-style-type: none"> • a simple description e.g. hydrogen is produced by electrolysis of water but electricity is expensive and its production damages the environment unless it is produced from renewable resources. Hydrogen only produces water when it is burnt. • the answer communicates ideas showing some evidence of clarity and organisation and uses scientific terminology appropriately • spelling, punctuation and grammar are used with some accuracy 	
3	5 - 6	<ul style="list-style-type: none"> • a detailed description e.g. hydrogen is produced by electrolysis of water which is readily available but electricity is expensive and its production damages the environment unless it is produced from renewable resources. Hydrogen only produces water when it is burnt but petrol also produces carbon dioxide. Petrol is obtained from crude oil which is non-renewable. Hydrogen is a flammable gas which is difficult to store • the answer communicates ideas clearly and coherently uses a range of scientific terminology accurately • spelling, punctuation and grammar are used with few errors 	

Question Number	Answer	Acceptable answers	Mark
2(a)	C – CH ₃ CH ₃		(1)

Question Number	Answer	Acceptable answers	Mark
2(b)		<p>carbon skeleton correct including double bond (1)</p> <p>rest of molecule correct (1)</p> <p>allow CH₃</p>	(2)

Question Number	Answer	Acceptable answers	Mark
2(c)	$\text{CH}_4 + 2\text{O}_2 \rightarrow \text{CO}_2 + 2\text{H}_2\text{O}$ <ul style="list-style-type: none"> • reactant formulae (1) • product formulae (1) • balancing of correct formulae (1) 	<p>accept multiples</p> <p>reject incorrect use of cases and non-subscripts</p>	(3)

Question Number	Indicative content	Mark
QWC	<p>*2(d)</p> <p>advantages</p> <ul style="list-style-type: none"> • renewable / sustainable • more plants can be grown • crops use up carbon dioxide and produce oxygen when growing /photosynthesising • carbon neutral because the carbon produced during combustion is used when growing the plants • does not use up crude oil/non-renewable resources <p>disadvantages</p> <ul style="list-style-type: none"> • crops grown for bio-fuels use up land • land could otherwise be used to provide homes / less farmland available for growing food crops • lots of crops required to provide a small amount of bio-methane • bad season reduces availability • carbon emissions due to transport and production if qualified 	(6)
Level	0	No rewardable content
1	1-	<ul style="list-style-type: none"> • a limited description e.g. using bio-methane conserves fossil fuels and uses up carbon dioxide when plants are grown • the answer communicates ideas using simple language and uses limited scientific terminology • spelling, punctuation and grammar are used with limited accuracy
2	3-	<ul style="list-style-type: none"> • a simple description e.g. growing plants to produce bio-methane is sustainable and conserves fossil fuels but uses up lots of farm land which could be used to grow plants for food • the answer communicates ideas showing some evidence of clarity and organisation and uses scientific terminology appropriately • spelling, punctuation and grammar are used with some accuracy
3	5 - 6	<ul style="list-style-type: none"> • detailed description e.g growing plants remove carbon dioxide from the air during photosynthesis and conserves fossil fuels but lots of crops are required to make bio-methane and this uses up farm land which could otherwise be used to grow crops for food • the answer communicates ideas clearly and coherently uses a range of scientific terminology accurately • spelling, punctuation and grammar are used with few errors

Question Number	Answer	Acceptable answers	Mark
3(a)(i)	LPG, petrol and diesel		(1)

Question Number	Answer	Acceptable answers	Mark
3(a)(ii)	<p>An explanation linking two of the following points</p> <ul style="list-style-type: none"> use of {fractions / large molecules / long chain hydrocarbons} of {less demand / less useful / lower value} / ORA (1) to meet demand / small molecules needed (1) 	<p>reject useless use up excess kerosene / fuel oil and bitumen</p> <p>to make more petrol / LPG / alkenes</p>	(2)

Question Number	Answer	Acceptable answers	Mark
3(b)	B the boiling point of the hydrocarbon increases		(1)
