COMPUTER SCIENCE

Paper 2 Fundamental Problem-solving and Programming Skills MARK SCHEME

Maximum Mark: 75

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2024 series for most Cambridge IGCSE, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

This document consists of **12** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptions for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit
 is given for valid answers which go beyond the scope of the syllabus and mark scheme,
 referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Mark scheme abbreviations

 	separates alternative words / phrases within a marking point separates alternative answers within a marking point
underline	actual word given must be used by candidate (grammatical variants accepted)
max	indicates the maximum number of marks that can be awarded
()	the word / phrase in brackets is not required, but sets the context

Note: No marks are awarded for using brand names of software packages or hardware.

Question	Answer			Marks	
1(a)	Pseudocode example	Selection	Iteration	Input/Output	4
	FOR Index ← 1 TO 10 Data[Index] ← 0 NEXT Index		✓		
	WRITEFILE ThisFile, "****"			✓	
	UNTIL Level > 25		\checkmark		
	IF Mark > 74 THEN READFILE OldFile, Data ENDIF	✓		✓	
	One mark per row.				
1(b)	1	Expression			4
	MyInt ← INT (3.1415926)				
	MyChar \leftarrow MID ("Elwood"	, 3,1)			
	Any of:				
	• MyString ← NUM_TO_S	TR (INT (2	7.509))		
	• MyString ← CHR (INT	(27.509))			
	• MyString ← TO_UPPER	(NUM_TO_S	TR(27.50	9))	
	• MyString ← TO_LOWER	(NUM_TO_S	TR (27.50)	9))	
	Any of:				
	 MyInt ← STR_TO_NUN MyInt ← LENGTH (RI MyInt ← LENGTH (LE 	1 (RIGHT (GHT ("ABC1 FT ("ABC12	"ABC123", .23", 3)) 3", 3))	3))	
	One mark per row				
1(c)	 1 mark for stating a suitable way <u>Identifier table</u> mark for giving one piece examples include: Explanation of what (each) The purpose of (each) varia An example of data values statement 	of document of information variable is use ble stored // Initial	that should that should d for isation value	be recorded.	2

Question Answer Marks 5 2(a) START INPUT Num1, Num2, Num3 No is Num1 > Num2 AND Num1 > Num3 ? No ls Num2 > Num3 ? Yes Set Ans to Num1 Set Ans to Num2 Set Ans to Num3 Set Average to (Num1 + Num2 + Num3) / 3 OUTFUT "The largest is ", Ans, " and the average is ", Average END Mark points 1 Condition for selecting one of the input numbers as largest value 2 ... and assign to Ans 3 Condition for selecting largest number for all three number input and assigning to Ans 4 Average calculated using Num1, Num2 and Num3 and stored in a variable. Reject use of DIV 5 Output of Ans and average in output symbol / parallelogram

------------	------

Question	Answer	Marks
2(b)	Example solutions:	5
	<pre>Flag ← GetStat() WHILE Flag <> TRUE FOR Port ← 1 TO 3 CALL Reset(Port) NEXT Port Flag ← GetStat() ENDWHILE</pre>	
	Alternative:	
	REPEAT Flag ← GetStat() IF Flag <> TRUE THEN FOR Port ← 1 TO 3 CALL Reset(Port) NEXT Port ENDIF UNTIL Flag = TRUE	
	<pre>One mark per point: 1 (Outer) conditional loop testing Flag 2 Correct assignment of Flag from GetStat() in a loop 3 (Inner) loop checking / counting port // Check if Port is different to 4 4 loop for 3 iterations 5 a call to Reset() in a loop</pre>	

Question	Answer	Marks
3(a)(i)	Pseudocode:	4
	TYPE Component DECLARE Item_Num : INTEGER DECLARE Reject : BOOLEAN DECLARE Stage : CHAR DECLARE Limit_1 : REAL DECLARE Limit_2 : REAL ENDTYPE	
	Mark as follows:	
	 One mark for TYPE and ENDTYPE statements One mark for Item_Num and Reject fields One mark for Stage field One mark for Limit fields as REAL 	

Question	Answer	Marks
3(a)(ii)	DECLARE Item : ARRAY [1:2000] OF Component// DECLARE Item : ARRAY [2000] OF Component// DECLARE Item : ARRAY [0:1999] OF Component One mark per underlined phrase	2
3(b)	 One mark per point: 1 Allows for iteration / can use a loop to access the records / data items 2 Use of index to directly access a record in the array // Example of simplification of code e.g. use of dot notation Item[1].Stage 3 Simplifies the code / algorithm // Reduces duplication of code // Program easier to write / understand / maintain / test / debug // Data items/record easier to search / sort / manipulate 	3

Question	Answer	Marks
4	Example solution:	5
	PROCEDURE ISRA() DECLARE a, b, c : INTEGER	
	OUTPUT "Input length of the first side" INPUT a	
	OUTPUT "Input length of the second side" INPUT b	
	OUTPUT "Input length of the third side" INPUT c	
	<pre>IF (a * a = (b * b) + (c * c)) OR (b * b = (a * a) + (c * c)) OR (c * c = (a * a) + (b * b)) THEN OUTPUT "It is right-angled" ELSE</pre>	
	OUTPUT "Not right-angled" ENDIF	
	ENDPROCEDURE	
	Mark as follows:	
	 Procedure heading and ending and declaration of all variables used Appropriate prompt and input for each length One correct length test All three length tests // selection of which test is required Output one of two messages following a reasonable attempt at MP3

------------	------

Question	Answer	Marks
5(a)(i)	One mark per error:	3
	 Syntax: 1. NEXT Index (should be ENDWHILE) 2. '&' used to concatenate an integer (in OUTPUT statement) Other: 3. Accesses element outside range // Accesses element 0 	
5(a)(ii)	One mark per point:	2
	Statement: The OTHERWISE statement Explanation: The result of MOD 2 can only be 0 or 1 	
5(b)	Run-time	1

Question	Answer	Marks
6(a)	Example solution:	7
	Function Trim(Name : STRING) RETURNS STRING CONSTANT Dots = "" CONSTANT Space = " "	
	IF LENGTH(Name) <= 16 THEN RETURN Name ENDIF	
	// Otherwise it has to be trimmed	
	WHILE LENGTH(Name) > 13 REPEAT	
	Name ← LEFT(Name, LENGTH(Name) - 1) // strip last char UNTIL RIGHT(Name, 1) = Space // back to SPACE ENDWHILE	
	Name ← LEFT(Name, LENGTH(Name) - 1) // remove the space Name ← Name & Dots RETURN Name	
	ENDFUNCTION	
	 Mark as follows: Function heading, ending, parameter and return type If length of original string <= 16 then return original string Any Conditional loop until string is short enough Inner conditional loop / second condition to identify word(s) to remove from the end of string // Check to identify word(s) to remove from the end of string Attempt to strip characters back to space Correct removal of word/words from end of string and remove final space Concatenate Dots and return result 	
	Max 7 marks	
6(b)(i)	A (very) large file is created // redundant zeroes are stored in the file	1
6(b)(ii)	 One mark for: Values are delimited by a special character / a separator character First character indicates sample length 	1
	Max 1 mark	
6(b)(iii)	The algorithm to store / extract / separate the individual values is more complex / takes longer to execute / run / process	1
	NE Algorithm is more complicated	

PMT

Question	Answer				Marks	
7(a)	Examples include:					
	Module: IdentifyMember() Use: Identifies a club member who has expressed an interest in a given class					
	Module: GetMemberPhoneNumber() Use: Gets the mobile phone number of a member					
	Module: CreateM Use: Generates a	teMessage() s a text message to a member				
	Module: SendMessage() Use: Sends a text message to a member in the waiting list					
	One mark for name and use					
	Note: max 3 marks					
7(b)(i)	Input	Output	Next state		5	
			S1			
	Input-A	none	S3			
	Input-A	Output-W	S3			
	Input-B	none	S2			
	Input-B	none	S5			
	Input-A	none	S2			
	Input-A	Output-X	S4			
	One mark per row	3 to 7				
7(b)(ii)	Input-B, Input-A				1	

Question	Answer	Marks
8(a)	One mark for reason, one for benefit	2
	Reason: (Program is) easier to design / implement / test / debug / modify	
	Benefit: Easier to check that each stage works as expected

Cambridge International AS & A Level – Mark Scheme **PUBLISHED**

Question	Answer	Marks
8(b)	Example algorithm based on finding position of first non-space character and then using substring function:	
	<pre>FUNCTION DeleteSpaces(Line : STRING) RETURNS STRING DECLARE NewLine : STRING DECLARE EndOfLeading : BOOLEAN DECLARE Count, NumSpaces : INTEGER DECLARE NextChar : CHAR CONSTANT Space = " "</pre>	
	NumSpaces \leftarrow 0 EndOfLeading \leftarrow FALSE	
	FOR Count ← 1 TO LENGTH(Line) NextChar ← MID(Line, Count, 1) IF NextChar <> Space AND EndOfLeading = FALSE	
	THEN NumSpaces ← Count - 1 // the number to trim EndOfLeading = TRUE ENDIF NEXT Count	
	NewLine \leftarrow RIGHT(Line, LENGTH(Line) - NumSpaces)	
	RETURN NewLine ENDFUNCTION	
	Mark as follows:	
	 Loop to length of parameter // Loop until first non-space character in Line Extract a character in a loop Identify <u>first</u> non-space character in a loop Attempt at removing leading spaces in Line Leading spaces removed from Line // Create new string without leading space Return a string following a reasonable attempt at removing leading spaces in Line

Question	Answer	Marks
8(c)	Example:	8
	<pre>PROCEDURE Stage_2(F1, F2 : STRING) DECLARE Line : STRING DECLARE Count : INTEGER Count ← 0</pre>	
	OPEN F1 FOR READ OPEN F2 FOR APPEND	
	<pre>WHILE NOT EOF(F1) READFILE F1, Line Line ← DeleteSpaces(Line) Line ← DeleteComment(Line) IF Line <> "" THEN WRITEFILE F2, Line // skip blank lines ELSE Count ← Count + 1 ENDIF ENDWHILE CLOSEFILE F1 CLOSEFILE F1 CLOSEFILE F2 OUTPUT Count, " blank lines were removed"</pre>	
	ENDPROCEDURE	
	 Procedure heading, parameters, ending Open both files in correct modes and subsequently close Loop to EOF(F1) Read a line from F1 in a loop Assign return values from DeleteComment() and DeleteSpaces() in a loop Check return value following both MP5 function calls is not an empty string and if so write to F2 in a loop Count the blank lines in a loop Output number of blank lines removed following a reasonable attempt after the loop
