### Cambridge International AS & A Level

COMPUTER SCIENCE

Paper 2 Problem Solving & Programming Skills

May/June 2021

MARK SCHEME

Maximum Mark: 75

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

#### **Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

#### **GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

#### GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

#### **GENERIC MARKING PRINCIPLE 3:**

#### Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit
  is given for valid answers which go beyond the scope of the syllabus and mark scheme,
  referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these
  features are specifically assessed by the question as indicated by the mark scheme. The
  meaning, however, should be unambiguous.

#### **GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

#### **GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

#### GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

### Cambridge International AS & A Level – Mark Scheme **PUBLISHED**

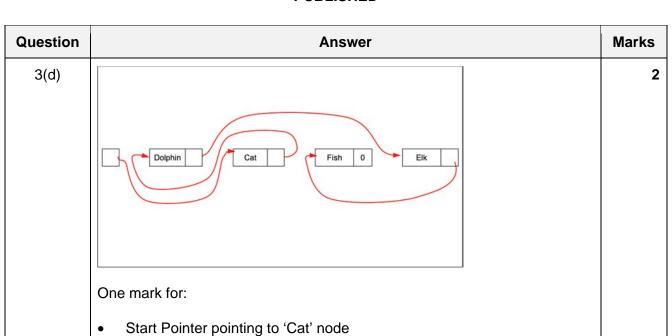

Question	Answer	Marks
2(a)(ii)	Number of outputs: 1	2
	Current state: S2	
2(b)(i)	Answers include:	2
	User ID / Username Book ID  Data of loop / return data	
	Date of loan / return date	
	One mark for 1 correct Two marks for all 3 correct	
	Note: Max 2 marks	
2(b)(ii)	Many examples but must be data that is NOT required for a loan, but which COULD be required somewhere by the library system.	1
	Note: must be data relating to users, books or loans	
	Answers include:  Users name / address / phone number / DOB  Book title / author / publisher / library rack number / ISBN number / price	
	<ul> <li>Date of loan / return date (if not already given in part (i))</li> <li>The length of the loan (assumed to be the same for all books)</li> </ul>	
2(b)(iii)	Many examples including:	2
	<ul> <li>Create loan / borrow book</li> <li>Return book</li> <li>Send letter / email / contact a user ref an overdue book</li> <li>View the loan history for a given book</li> <li>View the loan history for a given user</li> </ul>	
	One mark for each	
		ı

Question	Answer	Marks
3(a)	Linked list	1
3(b)	Start pointer	1
3(c)	One mark for each:	2
	Name: Null pointer	
	Meaning: There are no further nodes in the list

Note: Max 2 marks

### Cambridge International AS & A Level – Mark Scheme **PUBLISHED**

Question	Answer	Marks
4	Marks awarded for a description of each of the following steps of the algorithm:	6
	<ul> <li>Reference variables for Count of students and Total marks</li> <li>Loop through all students (Count)</li> <li>Input individual mark (in loop)</li> <li>Compare mark with threshold / boundary values to determine grade (in loop)</li> <li>Output the grade for a student (in loop)</li> <li>Maintain a Total (and Count if required) (in loop)</li> <li>Calculate average by dividing Total by Count and Output (after loop)</li> </ul>	
	Note: Max 6 marks	

Remaining arrows:  $Cat \rightarrow Dolphin \rightarrow Elk \rightarrow Fish$

Question	Answer		Marks
5(a)(i)	DECLARE RNum : ARRAY[1:100] OF INTEGER  DECLARE Index, Count : INTEGER  Count ← 0  FOR Index ← 1 TO 100  RNum[Index] ← INT(RAND(200)) + 1  IF RNum[Index] >= 66 AND RNum[Index] <= 100  Count ← Count + 1  ENDIF  NEXT Index  OUTPUT Count  Mark as follows:  1 Array declaration  2 Loop for 100 iterations  3 Array element index 'syntax' (left-hand side of assistance)  expression) in a loop  4 Use of RAND() to generate value in range (and assistance)  element) in a loop  5 Check if random number within range and if so, in a loop  6 Output of count (following a reasonable attempt) after	gnment ssign to array crement count <b>in</b>	6
5(a)(ii)	One mark per bullet / sub-bullet point  1 Initialise the array to a rogue value (to indicate 'unassigned' element) 2 Add a conditional loop to: 3 Generate and store a random number (in the correct range) 4 Check the stored number against values already in the array 5 If the stored number is found then generate another random value 6 Otherwise add it to the array (and exit loop)  Note: Max 3 marks		3
5(b)(i)		Answer	4
	Give a line number containing an example of an initialisation statement.	07	
	Give a line number containing the start of a repeating block of code.	09 / 10	
	Give a line number containing a logic statement.	12	
	Give the number of parameters of function MID().	3	
	One mark for each row		
5(b)(ii)	<pre>IF (NextChar &gt;= 'a') AND (NextChar &lt;= 'z')  One mark for IF AND One mark for both conditions</pre>	ΓΗΕΝ	2

© UCLES 2021 Page 6 of 10

Question	Answer	Marks
6	PROCEDURE CountVowels(ThisString : STRING)  DECLARE Index : INTEGER  DECLARE ThisChar : CHAR	8
	<pre>FOR Index ← 1 to 6     CharCount[Index] ← 0 //initialise elements NEXT Index Index ← 1</pre>	
	FOR Index ← 1 TO LENGTH(ThisString)  ThisChar ← LCASE(MID(ThisString, Index, 1))	
	CASE OF ThisChar  'a' : CharCount[1] ← CharCount[1] + 1  'e' : CharCount[2] ← CharCount[2] + 1  'i' : CharCount[3] ← CharCount[3] + 1  'o' : CharCount[4] ← CharCount[4] + 1  'u' : CharCount[5] ← CharCount[5] + 1  'a' TO 'z': CharCount[6] ← CharCount[6] + 1  ENDCASE  NEXT Index  FOR Index ← 1 to 6  OUTPUT CharCount[Index] //output results	
	NEXT Index ENDPROCEDURE	
	1 mark for each of the following:	
	Procedure heading (with parameter) and ending Declare local variable for Index as loop counter but not CharCount array Initialise elements of CharCount array to zero Loop through all characters in ThisString Use of MID() to extract single character Test for each vowel and increment associated count Test for consonants and increment associated count Output the results (supporting text not necessary) after the loop	
	Note: Max 7 if CharCount not used to store count
