Paper 2 Problem Solving & Programming

October/November 2021

MARK SCHEME

Maximum Mark: 75

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **11** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

| Question | Answer | Marks | | | | | | | | | | |
|--|---|-----------------|-----------|--|-------------|------------------|---------------|-------------------------------------|----------------|---|----------------|----------|
| 1(a)(i) | One from: <ul style="list-style-type: none"> • The program obeys the rules / grammar of the programming language used • The program will run // it can be compiled / interpreted • Accept by example. e.g. 'no mis-spelt keywords' / 'all brackets match' | 1 | | | | | | | | | | |
| 1(a)(ii) | One mark for type plus one for corresponding description Type of error: A logic error Description: <ul style="list-style-type: none"> • An error in the algorithm / design of the solution • the program does not behave as expected / give the expected output. • Accept by example e.g. wrong arithmetic operator used / wrong loop count OR Type of error: Run-time error Description: <ul style="list-style-type: none"> • The program performs an illegal instruction / invalid operation • Accept by example: divide by zero or endless loop or simply 'crashes' / freezes | 2 | | | | | | | | | | |
| 1(b) | <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th data-bbox="304 1133 908 1196" style="text-align: center;">Use of variable</th> <th data-bbox="908 1133 1096 1196" style="text-align: center;">Data type</th> </tr> </thead> <tbody> <tr> <td data-bbox="304 1196 908 1258">The average mark in a class of 40 students</td> <td data-bbox="908 1196 1096 1258" style="text-align: center;">REAL</td> </tr> <tr> <td data-bbox="304 1258 908 1321">An email address</td> <td data-bbox="908 1258 1096 1321" style="text-align: center;">STRING</td> </tr> <tr> <td data-bbox="304 1321 908 1384">The number of students in the class</td> <td data-bbox="908 1321 1096 1384" style="text-align: center;">INTEGER</td> </tr> <tr> <td data-bbox="304 1384 908 1447">Indicate whether an email has been read</td> <td data-bbox="908 1384 1096 1447" style="text-align: center;">BOOLEAN</td> </tr> </tbody> </table> <p data-bbox="304 1491 544 1525">One mark per row</p> | Use of variable | Data type | The average mark in a class of 40 students | REAL | An email address | STRING | The number of students in the class | INTEGER | Indicate whether an email has been read | BOOLEAN | 4 |
| Use of variable | Data type | | | | | | | | | | | |
| The average mark in a class of 40 students | REAL | | | | | | | | | | | |
| An email address | STRING | | | | | | | | | | | |
| The number of students in the class | INTEGER | | | | | | | | | | | |
| Indicate whether an email has been read | BOOLEAN | | | | | | | | | | | |
