	Total	100		

#### **ADDITIONAL MATERIALS**

A calculator.

#### **INSTRUCTIONS TO CANDIDATES**

Use black ink or black ball-point pen. Do not use gel pen or correction fluid.

Write your name, centre number and candidate number in the spaces at the top of this page.

Answer all questions.

Write your answers in the spaces provided in this booklet. If you run out of space, use the additional page(s) at the back of the booklet, taking care to number the question(s) correctly.

#### **INFORMATION FOR CANDIDATES**

The number of marks is given in brackets at the end of each question or part-question. You are reminded of the need for good English and orderly, clear presentation in your answers.

The total number of marks available is 100.

Answer <b>all</b> questions.			
Ехр	plain parallel processing, giving a suitable example.		
You	ur answer should include any potential limitations. [6]

(B500U10-1)

(b)	Give <b>one</b> example for each	ch of the following from the class diagram.	E
	(i) A public method.		[1]
	(ii) A method that requ	iires a parameter.	[1]
	(iii) A method that does	s not require a parameter.	[1]
(c)	Describe the difference b	petween a private and protected method.	[2]

13. Describ	e the possible effects of computers on the nature of employment in wider society.	[6]
•		••••••
•••••		••••••

A new computerised system has been developed for an organisation.
They will be provided with user and maintenance documentation for the new system. They will also have to consider either to carry out direct or parallel system changeover.
Discuss the relative merits of direct and parallel system changeover methods, and describe the typical contents of user and maintenance documentation. [12]
