

**AQA Computer Science A-Level**  
**4.4.4 Classification of algorithms**  
Past Paper Mark Schemes

## Additional Specimen Paper 1

01	1	<b>Mark is for AO1 (knowledge)</b>  <b>1 mark: B;</b>	1
01	2	<b>Mark is for AO1 (knowledge)</b>  <b>1 mark: A;</b>	1
01	3	<b>Mark is for AO1 (understanding)</b>  It demonstrates that there are some (well-defined) problems that cannot be solved by a computer;	1
02	4	<b>Mark is for AO2 (analyse)</b>  nlog n  A. $O(n \log n)$ A. $O(n \log_2 n)$ A. $n \log_2 n$ NE. $\log(n)$	1

## Additional Specimen Paper 2

08	1	<b>Mark is for AO2 (apply)</b>	
		$\mathbb{N} // \{ z \mid z \in \mathbb{N} \text{ and } z < y \};$ <b>A. Natural numbers</b>  <b>A. <math>\{ z \mid z \in \mathbb{N} \text{ and } z \geq 0 \text{ and } z &lt; y \}</math></b>	1

## June 2011 Comp 3

<b>1</b>	(c)										
		<table border="1" style="margin: auto; border-collapse: collapse;"> <thead> <tr> <th style="padding: 2px;">Order of complexity</th> <th style="padding: 2px;">Tick one box</th> </tr> </thead> <tbody> <tr> <td style="text-align: center; padding: 2px;"><math>O(\log_2 n)</math></td> <td style="text-align: center; padding: 2px;">✓</td> </tr> <tr> <td style="text-align: center; padding: 2px;"><math>O(n)</math></td> <td style="text-align: center; padding: 2px;"></td> </tr> <tr> <td style="text-align: center; padding: 2px;"><math>O(n^2)</math></td> <td style="text-align: center; padding: 2px;"></td> </tr> </tbody> </table>	Order of complexity	Tick one box	$O(\log_2 n)$	✓	$O(n)$		$O(n^2)$		
Order of complexity	Tick one box										
$O(\log_2 n)$	✓										
$O(n)$											
$O(n^2)$											
		<i>Do not award mark if more than one box ticked</i>	<b>1</b>								

## June 2012 Comp 3

<b>3</b>	(a)	Space / Memory (complexity); <b>A</b> amount of memory used	<b>1</b>
----------	-----	--	----------

<b>3</b>	(b)	(ii)	$O(n^2)$ ;	<b>1</b>
<b>3</b>	(b)	(iii)	<p><b>MARKS CAN ONLY BE AWARDED IF CORRECT ANSWER FOR PART 3 (b) (ii)</b></p> <p><b>Alternative 1:</b> Algorithm has nested loops // two loops with one inside the other; <b>A</b> reference to inner and outer loops Each loop repeats N times;</p> <p><b>Alternative 2:</b> The (basic) operation / If statement / file read / comparison is carried out <math>N^2</math> times; because it is inside nested loops // because each loop executes N times;</p> <p><b>Alternative 3:</b> Each of the (N) entries is compared to each of the (N) others // each entry is compared N times; so <math>N^2</math> (<b>A</b> <math>N*N</math>) comparisons/operations are required // <math>N*N=N^2</math>; <b>A</b> uppercase or lowercase n <b>A</b> answers where examples are used instead of N and <math>N^2</math>, e.g. 3 and 9. <b>A</b> check as alternative to comparison <b>MAX 2</b></p>	<b>2</b>

11	(a)	<p>Is it possible in general to <b>write a program/algorithm</b>; that can tell, given any program and its inputs and without <b>running/executing the program</b>;, whether the given program with its given inputs will halt?</p> <p><b>A</b> "it" in second reference to program.  <b>A</b> "create a Turing machine" for "write an algorithm"</p>	2
----	-----	---	---

11	(b)	<p>Shows that some problems are non-computable / undecidable // shows that some problems cannot be solved by a computer/algorithm;</p> <p>In general, inspection alone cannot always determine whether any given algorithm will halt for its given inputs // a program cannot be written that can determine whether any given algorithm will halt for its given inputs;</p> <p><b>A</b> it is not computable  <b>MAX 1</b></p>	1
----	-----	--	---

### June 2017 Paper 1

03	1	<p><b>Mark is for AO1 (knowledge)</b></p> <p>Merge sort;</p>	1
03	2	<p><b>Mark is for AO1 (understanding)</b></p> <p>4;</p>	1
03	3	<p><b>Mark is for AO1 (knowledge)</b></p> <p><math>n^2 // O(n^2)</math>;</p> <p><b>A.</b> other ways of indicating <math>n^2</math> e.g. <math>n^2</math>                      <b>A.</b> <math>On^2</math></p>	1

03	4	<p><b>Marks are for AO1 (understanding)</b></p> <p>In each pass through the list <math>n</math> items will be examined;  There will be (at most) <math>n</math> passes through the list;</p>	2
----	---	--	---

05	4	<p><b>1 mark for AO1 (knowledge)</b></p> <p>a heuristic approach employs a method of finding a solution that might not be the best;</p> <p><b>1 mark for AO1 (understanding)</b></p> <p>algorithm might need to consider visiting less/fewer cells/co-ordinates // algorithm might use knowledge of the domain to cut-down the search space // algorithm might consider visiting certain cells/coordinates first;</p>	2
----	---	---	---

### June 2013 Comp 3

6	(a)	<p>Most efficient: C // <math>O(n)</math> A. n  B // <math>O(n^2)</math> A. <math>n^2</math>  Least efficient: A // <math>O(a^n)</math> A. <math>a^n</math></p>	1	
---	-----	---	---	--

6	(b)	(i)	<p>The problem can be solved;  But not in polynomial time // only in exponential (or worse) time // it takes an unreasonable amount of time to do so // can't be solved quickly enough for it to be useful;  A takes too long for a computer to solve but <b>NE</b> just takes a long time  A "algorithm exists" for can be solved  A answers relating to space rather than time  <b>TO</b> of the solving mark, if states that can be solved in polynomial/reasonable time</p>	2	
---	-----	-----	---	---	--

6	(b)	(ii)	<p><b>Problem</b></p>	<p><b>Intractable? (Tick One)</b></p>	1	
			<p>The travelling salesman problem.</p>	<p>✓;</p>		
			<p>The problem of sorting a list of names into alphabetic order.</p>			
			<p>The Halting problem.</p>			
<p><b>A alternative indicators for ticks  Do not award mark if more than one box is ticked.</b></p>						

## Specimen Paper 1

03	6	<p><b>All marks AO1 (knowledge)</b></p> <p><b>1 mark (1 from):</b> The problem can be solved // algorithm exists for problem; But it cannot be solved in polynomial time // but not quickly enough to be useful;</p> <p><b>Max 2</b></p> <p><b>1 mark:</b> It takes an unreasonable amount of time; to solve; <b>A</b> Too long time but <b>R</b> Long time</p>	2
03	7	<p><b>All marks AO1 (understanding)</b></p> <p><b>1 mark:</b> Use of heuristic; algorithm that makes a guess based on experience; That provides a close-to-optimal solution/approximation; that only works in some cases; <b>A</b> non-optimal</p> <p>Example of heuristic method eg hill-climbing/stochastic/local improvement/greedy algorithms/simulated annealing/trial and error/any reasonable example;</p> <p><b>1 mark:</b> Relax some of the constraints on the solution; <b>A</b> Solve simpler version of problem</p>	2
04	4	<p><b>Mark is for AO1 (understanding)</b></p>	1

		$O(k^n)$ ; <b>A</b> $k^n$	
04	5	<b>Mark is for AO1 (knowledge)</b> $O(\log n)$ ; <b>A</b> $\log n$	1
04	6	<b>Mark is for AO1 (knowledge)</b> $O(1)$ ; <b>A</b> 1	1
04	7	<b>Mark is for AO1 (knowledge)</b> $O(n)$ ; <b>A</b> n	1
04	8	<b>All marks AO1 (understanding)</b>  <b>1 mark:</b> As the size of the list increases the time taken to search for an item increases; at the same rate; // <b>1 mark:</b> A linear search looks at each item in the list in turn (until it reaches the end of the list or the item being searched for is found); so if there are n items in the list the worst case would be n comparisons;	2
