

AQA Computer Science A-Level
4.9.3 The Internet
Past Paper Mark Schemes

January 2009 Comp 2

6	(a)	(i)	the <u>protocol</u> used // this is the hypertext transfer <u>protocol</u> ;	1
		(ii)	address of Aqa's World Wide Web server; R domain name	1
		(iii)	the path/location of the file/resource; OR <i>description of folder structure</i> ;	1

January 2010 Comp 2

1	(a)			URL	Domain Name	IP Address	Prot ocol	
		(i)	http://www.guineas.co.uk	✓				
		(ii)	212.58.251.195			✓		
		(iii)	guineas.co.uk		✓			
			1 mark for each correctly placed tick R Answers with more than one tick on a row.					3

1	(b)		To translate/convert/resolve domain names into IP addresses; A FQDN for domain name Answer must have the CONCEPT of an action NE To store the domain names and IP Addresses NE To access the web page without knowing the IP address NE To link the domain name to the IP address	1
---	-----	--	---	---

January 2011 Comp 2

10	a		<p>(aqa.org.uk) <u>domain name</u>; R FQDN (courses/computing.html) <u>path name</u> // location of file/resource/object/document // path of file/resource/object/document; NE file name</p>	2
----	---	--	---	---

10	b		<p>A set of (agreed) rules / codes / signals (for data exchange between systems); Agreed standard for communication between computer systems;</p>	MAX 1
----	---	--	--	----------

10	d		<p>Easier to remember a FQDN or converse for IP address i.e. IP addresses are less memorable; FQDN can identify (to a human) what a site is whereas an IP address cannot // easier to understand;</p>	MAX 1	
----	---	--	---	----------	--

January 2012 Comp 2

5	a		<p>To examine the destination of each packet; To forward packets from one network to another; To manage congestion; Choose an appropriate forwarding route; Route packets according to destination IP address; Store incoming packets temporarily; Change link address in packet; To store/make use of a routing table;</p> <p>A – data instead of packets R – information / signals</p>	MAX 2
---	---	--	--	----------

January 2013 Comp 2

6	a	<p>WWW (max 3 marks) A system of interlinked / hypertext documents; Accessed via the Internet; Using HTTP protocol;</p> <p>NE web a collection of web pages</p> <p>Internet (max 3 marks) A network of interconnected computer networks; A. a network of computers; Using a <u>globally</u> unique address space; Using end-to-end communication protocol // Internet Protocol // "TCP / IP";</p> <p>Supports a range of application protocols; A. two examples of different protocols; R. "TCP" R. "IP"</p>	MAX 4
6	b	<p>Messages split into packets; A. chunks Each packet given destination/source address; Each packet dispatched to the Internet through a router/gateway; Packets sent independently; Packets given a sequence number; Routers forward packets (until they reach destination); Path of packet transfer determined by router(s); Packets reassembled at the destination;</p>	MAX 2

6	c		<p>12.23.45.89</p> <p>An IP (v4) address (that uniquely identifies a machine on the Internet) // Internet protocol address;</p> <p>80</p> <p>A port number // a number that specifies which process on the receiving machine/host to send the data to; A. port;</p> <p>Denotes that HTTP (server) is recipient of packet // packet is an HTTP packet</p>	2
----------	----------	--	--	----------

June 2010 Comp 2

2	(c)		<p>Communication initiated by clients;</p> <p>Clients must know which port number to connect to // (Server) port number must be known by client (before communication with server starts) // So client can select service;</p> <p>Particular port numbers are used to provide a particular service // A Example of specific well known port number with its use;</p> <p>MAX 2</p>	2
----------	------------	--	---	----------

3		A	The protocol // This resource uses file transfer protocol;	1
3		B	Address of (ftp) server // Fully Qualified Domain Name; A FQDN R Domain name	1
3		C	Pathname/location of file/page/resource // Description of file structure; R Filename	1

June 2011 Comp 2

2			<p>(http means) Hypertext transfer protocol (will be used) // this is the protocol / set of rules (that will be used) A "The protocol" as a BOD mark on this occasion but just the word "protocol" as NE. R format</p> <p>(www means) Resource/web page/web site/URL is part of the world wide web // on a web/virtual server; NE world wide web on its own</p> <p>(uk means) Country the site is <u>registered</u> in; A organisation / company based in UK NE site in the UK, country on its own</p>	3
---	--	--	---	---

June 2011 Comp 3

8	(e)	<p>Below are some example security threats and measures, but they are only examples. Award marks for all reasonable security threats and appropriate measures.</p> <p><i>Threats:</i></p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 2px;">Virus</td> <td style="padding: 2px;">Malicious self-replicating programs which attach to other programs</td> </tr> <tr> <td style="padding: 2px;">Spam</td> <td style="padding: 2px;">Unsolicited junk email</td> </tr> <tr> <td style="padding: 2px;">Worm</td> <td style="padding: 2px;">Malicious self-replicating programs which replicate across networks using security vulnerabilities</td> </tr> <tr> <td style="padding: 2px;">Remote Login</td> <td style="padding: 2px;">Ability to login to a computer via Internet A "hacking" if explained</td> </tr> <tr> <td style="padding: 2px;">Trojan</td> <td style="padding: 2px;">A malicious program hidden inside another program // masquerading as another program</td> </tr> <tr> <td style="padding: 2px;">Phishing</td> <td style="padding: 2px;">Attempts to get users to divulge personal information</td> </tr> <tr> <td style="padding: 2px;">Pharming</td> <td style="padding: 2px;">Misdirecting users to a fake website by changing DNS entries</td> </tr> <tr> <td style="padding: 2px;">Spyware</td> <td style="padding: 2px;">Program that collects information from a user's computer without user knowing</td> </tr> <tr> <td style="padding: 2px;">Denial of Service Attack</td> <td style="padding: 2px;">Repeated requests/pings from the Internet could overwhelm (parts of) the network.</td> </tr> </table>	Virus	Malicious self-replicating programs which attach to other programs	Spam	Unsolicited junk email	Worm	Malicious self-replicating programs which replicate across networks using security vulnerabilities	Remote Login	Ability to login to a computer via Internet A "hacking" if explained	Trojan	A malicious program hidden inside another program // masquerading as another program	Phishing	Attempts to get users to divulge personal information	Pharming	Misdirecting users to a fake website by changing DNS entries	Spyware	Program that collects information from a user's computer without user knowing	Denial of Service Attack	Repeated requests/pings from the Internet could overwhelm (parts of) the network.
Virus	Malicious self-replicating programs which attach to other programs																			
Spam	Unsolicited junk email																			
Worm	Malicious self-replicating programs which replicate across networks using security vulnerabilities																			
Remote Login	Ability to login to a computer via Internet A "hacking" if explained																			
Trojan	A malicious program hidden inside another program // masquerading as another program																			
Phishing	Attempts to get users to divulge personal information																			
Pharming	Misdirecting users to a fake website by changing DNS entries																			
Spyware	Program that collects information from a user's computer without user knowing																			
Denial of Service Attack	Repeated requests/pings from the Internet could overwhelm (parts of) the network.																			

		<p><i>Measures:</i></p> <p>Use a secure operating system <u>Regularly</u> install security patches/upgrades for software Use virus checking software + some explanation of what this will do Keep virus definitions up to date Use anti-spyware software + some explanation of what this will do Use of firewall to control traffic between private network and Internet // explanation of how firewall might work Use of spam filter in email package Enable web browser features to detect Pharming Restrictions on which websites users can visit White lists/black lists Enforce strong passwords Encryption of data during transmission Authentication of user/computer attempting remote login using digital certificate//smart card//security code generating device Log files Network manager keeps informed about latest threats // network manager trains users about threats</p> <p>Measures must be appropriate to security issues described.</p> <p>More than one measure can be used for the same threat.</p>
--	--	---

June 2012 Comp 3

8	(c)	To connect networks using different protocols // to convert transmitted data from one protocol to another;	1
---	-----	--	---

June 2013 Comp 3

5	(f)	<p><u>SUBJECT MARKING POINTS:</u></p> <p>Internal:</p> <ul style="list-style-type: none"> • Student's computer uses <u>subnet mask</u> (and destination/web server's IP address) to determine if destination computer/web server is on same subnet // identify not on same subnet • Up to two marks from description (in separate section below) of how subnet mask is used • Packet is sent (from student's computer) to Router (1) • Router 1 identifies that destination <u>is outside the LAN</u> so forwards packet to Gateway <p>External:</p> <ul style="list-style-type: none"> • <u>Hierarchical</u> organisation of routers • Example of hierarchical organisation of routers e.g. passed up to a national router, transferred internationally and then passed back down a hierarchy • Path to take selected by each router (not determined at start) NE passed from router to router • Route may change as a result of e.g. congestion, technical problems 	8
---	-----	---	---

		<p>Either:</p> <ul style="list-style-type: none"> • (Possible) repackaging of packet to use different protocol (e.g. Gateway may change protocol) • Route determined using the (Network ID part of the destination) IP address (Note: can infer "IP address" if just "address" is stated, if previously candidate has written about an IP address) • Use of router tables / criteria to determine next hop / (step of) path • Router decrementing "time to live" of packet • Source and destination MAC addresses changed at each router // MAC addresses used for each "hop" <p>How subnet mask used (MAX 2 points):</p> <ul style="list-style-type: none"> • AND operation of subnet mask with student's computer's IP address • AND operation of subnet mask with web server's IP address • Result (of AND operation) is the network ID; • Network IDs compared • If they are the same, then the computers are on the same subnet
