### Cambridge IGCSE™ (9–1)

COMPUTER SCIEN	CE	0984/22
Paper 2		May/June 2021
MARK SCHEME		
Maximum Mark: 50		
	Published	l

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

### Cambridge IGCSE (9–1) – Mark Scheme

#### PUBLISHED

#### **Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

#### GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

#### **GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always whole marks (not half marks, or other fractions).

#### **GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded positively:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- · marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

#### **GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

### Cambridge IGCSE (9–1) – Mark Scheme **PUBLISHED**

### **GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

### **GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

#### Please note the following further points:

The words in **bold** in the mark scheme are important text that needs to be present, or some notion of it needs to be present. It does not have to be the exact word, but something close to the meaning.

If a word is underlined, this **exact** word must be present.

A single forward slash means this is an alternative word. A double forward slash means that this is an alternative mark point.

Ellipsis (...) on the end of one-mark point and the start of the next means that the candidate **cannot** get the second mark point without being awarded the first one. If a MP has ellipsis at the beginning, but there is no ellipsis on the MP before it, then this is just a follow-on sentence and **can** be awarded **without** the previous mark point.

Question	Answer	Marks
4(b)	Any <b>four</b> from:	4
	Position: before INPUT PasswordRepeat // at start	
	use a (variable) counter (for number of tries) <b>or</b> flag	
	initialise variable counter <b>or</b> flag	
	Position after IF Length(Password) >= 8 THEN or after INPUT PasswordRepeat	
	• insert REPEAT/WHILE/(conditional) loop	
	Position after OUTPUT "Reject"	
	add one to counter (for number of tries)	
	• output a message "Try again"	
	• add INPUT PasswordRepeat	
	Position after OUTPUT "Accept"	
	reset flag to show password matched	
	Position after ENDIF	
	• (insert UNTIL/ENDWHILE) to exit the loop after three tries or if the repeated password matches the original	

Question	Answer	Marks
5(a)	<ul> <li>One mark for:</li> <li>Use of FOR loop</li> <li>Working loop with correct number of Iterations</li> <li>Correct assignment</li> <li>FOR Count ← 1 TO 20 dataArray[Count] ← 0</li> <li>NEXT (Count)</li> </ul>	3
5(b)	(A FOR loop has) a fixed number of repetitions // No need to manage the loop counter // no need to use another variable for the array index	1
