### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions in Section A and **one** question from Section B.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*

### Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*
- In your responses, you should take particular care with punctuation and grammar, as well as the clarity of your expression.
- Calculators may be used.

### Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

**PEARSON**

3 The diagram shows the aggregate demand (AD) curve and long-run aggregate supply curve (LRAS) for an economy.

What would be the long-run effect of government policy to increase business competition on the country's average price level and real output? You may wish to annotate the diagram in your answer.

(1)

|          | Average Price Level | Real Output |
|----------|---------------------|-------------|
| <b>A</b> | Rise                | Rise        |
| <b>B</b> | Rise                | Fall        |
| <b>C</b> | Fall                | Rise        |
| <b>D</b> | Fall                | Fall        |

- 6 The chart below shows the balance of trade in goods for France between 2003 and 2013.

(Source: <http://www.statista.com/statistics/263622/trade-balance-of-goods-in-france/>)

From this chart it can be deduced that for France over the whole of this period

(1)

- A tax revenue was greater than government expenditure
- B the value of imported goods was greater than the value of exported goods
- C private investment was increasing
- D the Balance of Payments was in deficit every year

### Extract 1 German trade surplus could threaten eurozone recovery

Germany's status as Europe's industrial power could be damaging the eurozone, the European Commission (EC) has said, as it launched an investigation into whether the country's large balance of trade surplus was slowing Europe's recovery. Germany, Europe's biggest economy, was one of three countries singled out for an in-depth review by the EC.

5

The EC said that Germany's large current account surplus, which accounts for most of the eurozone's positive balance, 'may put pressure on the euro to appreciate. This would make it more difficult for the some countries to recover competitiveness through depreciation'.

However, the EC insisted it was not criticising Germany's economic success. 'The issue is whether Germany ... could do more to help rebalance the European economy,' said Jose Manuel Barroso, the president of the EC. Olli Rehn, commissioner for economic and monetary affairs argued that its persistent high surplus also means that Germans are continuously investing a large part of their savings abroad. The question is whether this is desirable for Germany and for the rest of the eurozone.

### Extract 2 Inflation in the United Kingdom in 2013

The UK's inflation rate has fallen slightly thanks to smaller price increases for clothes and transport than a year ago. The annual inflation rate as measured by the consumer price index fell from 2.8% in July to 2.7% in August 2013. This means a basket of goods and services that cost £100 in August 2012 would have cost £102.70 in August 2013.

5

Prices have been rising faster than wages in the UK for several years, pushing living standards down to their lowest level in a decade. The rate of inflation peaked at 5.2% in September 2011 and remained above the Bank of England's 2% target in August 2013.

### Extract 1 Taiwan's exports

Taiwan's economy has outperformed other economies in the region. This has been driven by demand for its electronic components and products, particularly smartphones. However, the value of Taiwan's exports of goods declined by 5.9% in August 2014, as strong demand for electronic components was offset by a fall in smartphone and petrochemical sales. It is too early to tell whether this recent decline becomes a trend, but it will be an important indicator for the rest of the world to watch, given the critical role that Taiwan's electronics sector plays in world supply chains. 5

(Source: <http://blogs.wsj.com/moneybeat/2014/10/07/macro-horizons-yet-more-proof-that-world-economy-outside-u-s-is-struggling/>)

### Extract 2 Taiwan's economy in 2014

Taiwan's central bank is scheduled to announce its interest rate at the end of September 2014, and the market is keen to know if it is the time for an increase as data showed economic recovery in the country.

Among major emerging Asian economies, Taiwan has the lowest interest rate at 1.87%. It compares to India's 8.00%, China's 6.00%, Thailand's 2.00% and South Korea's 2.25%. 5

Taiwan's economy is growing fast, inflation is rising and unemployment is falling which is increasing the pressure on the central bank to raise interest rates. The central bank is worried about the economic cost of inflation to Taiwan such as the impact on competitiveness and savers.

The Taiwan dollar is not reflecting a possible rate increase. It has been declining over the past few weeks against the US dollar and has weakened more than 1% in the first 3 weeks in September 2014. 10

Taiwan's GDP growth rose to 3.74% from a year earlier in the second quarter of 2014 from 3.14% in the previous quarter. The inflation rate is also on the rise in the country. It has risen from 1.64% in June to 1.75% in July and then to 2.07% in August 2014. 15
