Mark scheme

June 2020

---

Version: 1.0 Final Mark Scheme

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from [aqa.org.uk](http://aqa.org.uk)

## Point marked questions marking instructions

The mark scheme will state the correct answer or a range of possible answers, although these may not be exhaustive. It may indicate how a second mark is awarded for a second point or developed idea. It may give an indication of unacceptable answers. Each mark should be shown by placing a tick where credit is given. The number of ticks must equal the mark awarded. Do not use crosses to indicate answers that are incorrect.

## Level of response marking instructions

Level of response mark schemes are broken down into levels, each of which has a descriptor. The descriptor is linked to the Assessment Objective(s) being addressed. The descriptor for the level shows the average performance for the level.

Before you apply the mark scheme to a student's answer read through the answer and annotate it (as instructed) to show the qualities that are being looked for. You can then apply the mark scheme. You should read the whole answer before awarding marks on levels response questions.

### Step 1 Determine a level

Descriptors for the level indicate the different qualities that might be seen in the student's answer for that level. When assigning a level you should look at the overall quality of the answer and not look to pick holes in small and specific parts of the answer where the student has not performed quite as well as the rest. If the answer covers different aspects of different levels of the mark scheme you should use a best fit approach for defining the level and then use the variability of the response to help decide the mark within the level, ie if the response is predominantly Level 2 with a small amount of Level 3 material it would be placed in Level 2 but be awarded a mark near the top of the level because of the Level 3 content. For instance, in a 9 mark question with three levels of response, an answer may demonstrate thorough knowledge and understanding (AO1 and AO2) but fail to respond to command words such as assess or evaluate (AO3). The script could still access Level 2 marks. Note that the mark scheme is not progressive in the sense that students don't have to fulfil all the requirements of Level 1 in order to access Level 2.

### Step 2 Determine a mark

Once you have assigned a level you need to decide on the mark. The descriptors on how to allocate marks can help with this. The exemplar materials used during standardisation will also help. There will generally be an answer in the standardising materials which will correspond with each level of the mark scheme. This answer will have been awarded a mark by the Lead Examiner. You can compare the student's answer with the example to determine if it is the same standard, better or worse than the example. You can then use this to allocate a mark for the answer based on the Lead Examiner's mark on the example. You may well need to read back through the answer as you apply the mark scheme to clarify points and assure yourself that the level and the mark are appropriate.

Indicative content in the mark scheme is provided as a guide for examiners. It is not intended to be exhaustive and you must credit other valid points. Students do not have to cover all of the points mentioned in the indicative content to reach the highest level of the mark scheme.

An answer which contains nothing of relevance to the question must be awarded no marks.

## Assessment of spelling, punctuation, grammar and use of specialist terminology (SPaG)

Accuracy of spelling, punctuation, grammar and the use of specialist terminology will be assessed via the indicated 9 mark questions. In each of these questions, three marks are allocated for SPaG as follows:

- **High performance** – 3 marks
- **Intermediate performance** – 2 marks
- **Threshold performance** – 1 mark

## General guidance

- Mark schemes should be applied positively. Examiners should look for qualities to reward rather than faults to penalise. They are looking to find credit in each response they mark. Unless the mark scheme specifically states, candidates must never lose marks for incorrect answers.
- The full range of marks should be used. Examiners should always award full marks if deserved, ie if the answer matches the mark scheme.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked unless the candidate has replaced it with an alternative response.
- Do NOT add ticks to level-marked questions – use the highlight tool/brackets to signify what is relevant.
- Sometimes there are specific “triggers” in the mark scheme that enable higher level marks to be awarded. For instance, an example or case study may be required for Level 3 if it is stated within the question.
- Where a source, such as a photograph or map, is provided as a stimulus it should be used if requested in the question, but credit can often be given for inferred as well as direct use of the source.
- Always be consistent – accept the guidelines given in the mark scheme and apply them to every script
- If necessary make comments to support the level awarded and to help clarify a decision you have made.
- Examiners should revisit standardise script answers as they apply the mark scheme in order to confirm that the level and the mark allocated is appropriate to the response provided.
- Mark all answers written on the examination paper.

**Section A : Issue evaluation**

Qu	Pt	Marking Guidance	Total marks
01	1	<p><b>In which year were global urban and rural populations the same?</b></p> <p>One mark for correct answer:</p> <p><b>B: 2007</b></p> <p>No credit if two or more answers are shaded.</p> <p>AO4 – 1 mark</p>	1
01	2	<p><b>Which of the following statements is correct?</b></p> <p>One mark for correct answer:</p> <p><b>A: Latin America/Caribbean is predicted to double its % urban population between 1950-2030</b></p> <p>No credit if two or more answers are shaded.</p> <p>AO4 – 1 mark</p>	1

01	3	<b>Explain the link between economic development and urbanisation.</b>	4

	<ul style="list-style-type: none"> <li>• <b>Level 3 (detailed)</b> – a wide range of supporting points identified and developed from the resources in order to support a judgement. Reference made to points across the resource booklet which brings in the wider specification context. Offers detailed observations which develop a discussion and support an evidenced judgement.</li> <li>• <b>Level 2 (clear)</b> – some use of Figure 3 with some broader reference to the other resources used in order to support a discussion. Offers a range of observations which support a judgement.</li> <li>• <b>Level 1 (basic)</b> – a limited number of appropriate points identified mainly from Figure 3, which are largely copied or with limited development. A narrow range of basic observations to support a judgement.</li> </ul> <p><u>Indicative content</u></p> <ul style="list-style-type: none"> <li>• This is clearly a complex discussion and responses need to be judged on the level of the discussion and how effectively evidence is used in order to develop ideas.</li> <li>• Students may develop a polarised discussion taking the view that slums are places of either ‘hope’ or ‘desperation’, or they might take a wider view and consider that ‘hope’ and ‘desperation’ can both be seen in slum areas. Either of these approaches is acceptable and the full mark range is open to both avenues of discussion.</li> <li>• Students may bring in their own place based examples or use evidence from cities not mentioned in the resources.</li> <li>• Individual views may be based partly on learned knowledge. For example, if a student has looked at successful NGO/Government socio-economic development programmes they may have a particular view, if they have looked at crime, disease and socio-economic problems related to urban slums they may have a different view. What is important is the quality of the discussion and how effectively information is used to develop the discussion.</li> <li>• Clearly there are huge variations in the quality of life in urban slums and consequently individual slums may be more, or less hopeful or desperate.</li> <li>• All slums are different and in some cases there may be a hierarchy of slum areas, where conditions vary. An example of this can be seen in Dharavi, where some of the older slum areas are more established and have secure structures with services, whereas the more recent slum areas may have far poorer facilities. In that instance “Hope and despair” might both be clearly evident within one large slum area or be seen in different slum areas within the same city.</li> <li>• ‘Hope and Despair’ may be considered in relation to future possibilities, so a temporal element could be considered. For example, living conditions may be desperate for some people but the opportunities within the city may create a better future for the next generations.</li> <li>• In relation to ‘Hope’, in general terms the resource based evidence suggests that urban areas provide a number of social and economic opportunities and may provide the possibility of a wider number of life chances which may lead to a better future.</li> <li>• In relation to ‘Despair’, in general terms the resource highlights the poor conditions that the poorest slum dwellers have to live in and the link to disease and crime. There is a brief suggestion that conditions in the poorest slums are poorer than in the rural areas from where people may have come.</li> </ul>

**Section B: Fieldwork**

Qu	Pt	Marking guidance	Total marks
04	1	<p><b>Complete the pie chart below to show the results of <u>Question 2</u> in the questionnaire (Figure 4).</b></p> <p>Two sectors completed accurately and shaded in correct order for 1 mark.                      No – 21%                      Don't know – 42%</p>  <p>AO4 – 1 mark</p>	1
04	2	<p><b>Using Figure 4, describe the pattern shown by the results of the car park survey.</b></p> <p>Answers can use the data OR map OR both.</p> <p>The expectation is that candidates will use the map and the data to offer some appreciation of the pattern. Consequently there is no credit for simply repeating the data, even if it is relative (Car Park B has a higher use than Car Park A).</p> <p>1 mark for some appreciation of distance-decay (nearer the town centre-higher use) <b>OR</b> references between weekday/Saturday. A second mark for some development, which might include use of the data or relative distance. All three car parks do not have to be considered in order to express a relationship.</p>	2

		<ul style="list-style-type: none"> <li>As you move away from the main shopping area the car parks are less busy(1), car park B nearest to the shopping area is busiest on both Wednesday and Saturday (d)(1).</li> <li>Car parks are busier on a Saturday (1), by between 23% and 31% (d)(1).</li> </ul>	
		AO4 – 2 marks	

04	3	<p><b>To what extent can the student draw reliable conclusions from the data?</b></p> <table border="1"> <thead> <tr> <th>Level</th> <th>Marks</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>2 (Clear)</td> <td>3–4</td> <td>AO3 – Demonstrates clear analysis of the data (<b>Figure 4</b>) in relation to the reliability of conclusions. AO4 – Clear reference to the data in <b>Figure 4</b>.</td> </tr> <tr> <td>1 (Basic)</td> <td>1–2</td> <td>AO3 – Demonstrates limited analysis of the data (<b>Figure 4</b>) in relation to the reliability of conclusions. AO4 – Some reference to the data in <b>Figure 4</b>.</td> </tr> <tr> <td></td> <td>0</td> <td>No relevant content.</td> </tr> </tbody> </table> <p>The answer must be linked to the original aim of the enquiry, ‘Does the town centre have a parking problem?’</p> <p><b>Level 2 (clear)</b> – An appreciation that the data might give an understanding that there are different pressures on different days and that there is more pressure to park closer to the main shopping area. However, there are limitations with the data (which should be expressed) and consequently the reliability of the conclusions must come into question.</p> <p><b>Level 1 (basic)</b> – Considers that the conclusions are reliable/unreliable by making superficial observations with limited use of data to support answer. Implied use of data related to reliability of conclusions.</p> <p><u>Indicative content</u></p> <ul style="list-style-type: none"> <li>It is busiest in the town centre so must have a parking problem.</li> <li>More people said yes than no so it must have a parking problem.</li> <li>None of the car parks are full so there is not a parking problem.</li> <li>There is evidence to suggest that there is more pressure near the main shopping area.</li> <li>There is evidence to suggest that there are variations across the week.</li> <li>None of the car parks are exceptionally busy on the Wednesday.</li> <li>Saturday is busier but Car park B is the only one which appears to be under any real pressure.</li> <li>The Car Park survey was limited, both in relation to days and times surveyed.</li> <li>There is no reference to the actual number of spaces in each car park.</li> <li>The questionnaire suggests that over half of all visitors arrive by car, suggesting a clear demand for parking spaces.</li> <li>The link between the two questions on the questionnaire is somewhat tenuous since a significant number of visitors visited by bus or walked and consequently their view in relation to question 2 might not be that helpful.</li> </ul>	Level	Marks	Description	2 (Clear)	3–4	AO3 – Demonstrates clear analysis of the data ( <b>Figure 4</b> ) in relation to the reliability of conclusions. AO4 – Clear reference to the data in <b>Figure 4</b> .	1 (Basic)	1–2	AO3 – Demonstrates limited analysis of the data ( <b>Figure 4</b> ) in relation to the reliability of conclusions. AO4 – Some reference to the data in <b>Figure 4</b> .		0	No relevant content.	4

1 (Basic)	1–3		<p>AO3 – Demonstrates a basic evaluation of how the results linked to and supported the original aim of the enquiry.</p> <p>AO3 – Demonstrates a basic evaluation of how the conclusions linked to and supported the original aim of the enquiry.</p> <p>AO3 – Makes basic and/or generic judgements about the extent to which the results and/or conclusions meet the original aim of the enquiry.</p>
	0		No relevant content.

The levels will reflect the extent to which students' can link their results and conclusions and use them to support/not support the original aim of their enquiry.

- **Level 3 (detailed)** reference to both results and conclusions to provide a detailed evaluation of how they supported the original aim of the enquiry.
- **Level 2 (clear)** reference to results and/or conclusions to provide a clear evaluation of how they supported the original aim of the enquiry.
- **Level 1 (basic)** reference to results and/or conclusions to provide a basic evaluation of how they supported the original aim of the enquiry.

Indicative content

The command is 'suggest' so the focus of the question is a suggestion of how the results gained and conclusions drawn supported the original aim of the enquiry and supported the student to be able to reach a judgement which is supported by evidence.

- The response should be seen in relation to the original aim of the enquiry.
- Students might consider the question in terms of accuracy/validity.
- Students might consider the original aim of their enquiry as to its appropriate/inappropriateness.
- Students might consider the accuracy of their results and how this affected the conclusions they drew.
- They may consider how far their conclusions supported them to reach a judgement about the original aim of their enquiry.
- Other data that could be useful to the enquiry but wasn't collected could be discussed.
