Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u> for our BTEC qualifications. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

If you have any subject specific questions about this specification that require the help of a subject specialist, you can speak directly to the subject team at Pearson. Their contact details can be found on this link: <u>www.edexcel.com/teachingservices</u>.

You can also use our online Ask the Expert service at <u>www.edexcel.com/ask</u>. You will need an Edexcel username and password to access this service.

Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

General Principles for Core Mathematics Marking

Method mark for solving 3 term quadratic:

1. Factorisation

 $(x^{2} + bx + c) = (x + p)(x + q)$, where |pq| = |c|, leading to x = ... $(ax^{2} + bx + c) = (mx + p)(nx + q)$, where |pq| = |c| and |mn| = |a|, leading to x = ...

2. <u>Formula</u>

Attempt to use <u>correct</u> formula (with values for a, b and c).

3. Completing the square

Solving $x^2 + bx + c = 0$: $(x \pm \frac{b}{2})^2 \pm q \pm c$, $q \neq 0$, leading to $x = \dots$

Method marks for differentiation and integration:

1. Differentiation

Power of at least one term decreased by 1. ($x^n \rightarrow x^{n-1}$)

2. Integration

Power of at least one term increased by 1. ($x^n \rightarrow x^{n+1}$)

Use of a formula

Where a method involves using a formula that has been learnt, the advice given in recent examiners' reports is that the formula should be quoted first.

Normal marking procedure is as follows:

Method mark for quoting a correct formula and attempting to use it, even if there are mistakes in the substitution of values.

Where the formula is <u>not</u> quoted, the method mark can be gained by implication from <u>correct</u> working with values, but may be lost if there is any mistake in the working.

Exact answers

Examiners' reports have emphasised that where, for example, an <u>exact</u> answer is asked for, or working with surds is clearly required, marks will normally be lost if the candidate resorts to using rounded decimals.

Answers without working

The rubric says that these <u>may</u> not gain full credit. Individual mark schemes will give details of what happens in particular cases. General policy is that if it could be done "in your head", detailed working would not be required.

Question Number	Scheme	Marks
1.	$(1 + 1^2)$	
	$x(1-4x^2)$ Accept $x(-4x^2+1)$ or $-x(4x^2-1)$ or $-x(-1+4x^2)$ or even $4x(\frac{1}{4}-x^2)$ or equivalent	B1
	Accept $x(-4x + 1)$ or $-x(4x - 1)$ or $-x(-1 + 4x)$ or even $4x(\frac{1}{4} - x)$ or equivalent quadratic (or initial cubic) into two brackets	M1
	x(1-2x)(1+2x) or $-x(2x-1)(2x+1)$ or $x(2x-1)(-2x-1)$	
	x(1-2x)(1+2x) of $-x(2x-1)(2x+1)$ of $x(2x-1)(-2x-1)$	A1
		[3]
		3 marks
	Notes	<u> </u>
	B1 : Takes out a factor of x or $-x$ or even $4x$. This line may be implied by correct final answer, but if this stage	
	is shown it must be correct . So B0 for $x(1+4x^2)$	
	M1: Factorises the quadratic resulting from their first factorisation using usual rules (see note 1 in General	
	Principles). e.g. x (1 – 4x) (x – 1). Also allow attempts to factorise cubic such as $(x – 2x^2)(1 + 2x)$ etc	
	N.B. Should not be completing the square here.	
	A1: Accept either $x(1-2x)(1+2x)$ or $-x(2x-1)(2x+1)$ or $x(2x-1)(-2x-1)$. (No fractions f	for this final
	answer)	
	Specific situations	
	Note: $x(1-4x^2)$ followed by $x(1-2x)^2$ scores B1M1A0 as factors follow quadratic factorisation	n criteria
	And $x(1-4x^2)$ followed by $x(1-4x)(1+4x)$ B1M0A0.	
	Answers with no working: Correct answer gets all three marks B1M1A1	
	: $x(2x-1)(2x+1)$ gets B0M1A0 if no working as $x(4x^2-1)$ would e	earn B0
	Poor bracketing: e.g. $(-1 + 4x^2) - x$ gets B0 unless subsequent work implies bracket round the case candidate may recover the mark by the following correct work.	

Question Number	Scheme	Marks
2.		
	$(8^{2x+3} = (2^3)^{2x+3}) = 2^{3(2x+3)}$ or 2^{ax+b} with $a = 6$ or $b = 9$	M1
	$= 2^{6x+9}$ or $= 2^{3(2x+3)}$ as final answer with no errors or $(y =)6x + 9$ or $3(2x + 3)$	A1
		[2]
		2 marks
	Notes	
	M1: Uses $8 = 2^3$, and multiplies powers $3(2x + 3)$. Does not add powers. (Just $8 = 2^3$ or $8^{\frac{1}{3}}$	= 2 is M0)
	A1: Either 2^{6x+9} or $= 2^{3(2x+3)}$ or $(y=)6x+9$ or $3(2x+3)$	
	Note: Examples: 2^{6x+3} scores M1A0	
	: $8^{2x+3} = (2^3)^{2x+3} = 2^{3+2x+3}$ gets M0A0	
	Special case: : $= 2^{6x} 2^9$ without seeing as single power M1A0	
	Alternative method using logs: $8^{2x+3} = 2^y \Rightarrow (2x+3)\log 8 = y\log 2 \Rightarrow y = \frac{(2x+3)\log 8}{\log 2}$	M1
	So $(y =)6x + 9$ or $3(2x + 3)$	A1 [2]

Allow any numerical gradient here including -2 or -1 but not zero . (Allow (6,5) as a slip if $y - y_1 = m(x - x_1)$ is quoted first) A1: Accept any multiple of the correct equation, provided that the coefficients are integers and equation = 0 e.g. $-x + 2y - 7 = 0$ or $k(x - 2y + 7) = 0$ or even $2y - x - 7 = 0$ M1: Either one of the x or y coordinates using their equation A1: Needs both correct values. dM1: Attempt to solve a 3 term quadratic by factorising, formula, completion of square or implied by correct answers. (see note 1) This mark depends on previous mark.

A1: Need both correct *x* answers (Accept equivalents e.g. 0.25) or both correct *y* values (Method 2)

M1: At least one attempt to find *second variable* (usually *y*) using their *first variable* (usually *x*) related to line meeting curve. Should not be substituting *x* or *y* values from part (a) or (b). This mark is **independent** of previous marks. Candidate may substitute in equation of line or equation of curve.
