

ADVANCED GCE 4753/01

MATHEMATICS (MEI)

Methods for Advanced Mathematics (C3)

MONDAY 2 JUNE 2008

Morning

Time: 1 hour 30 minutes

Additional materials (enclosed): None

Additional materials (required):

Answer Booklet (8 pages)

Graph paper

MEI Examination Formulae and Tables (MF2)

INSTRUCTIONS TO CANDIDATES

- Write your name in capital letters, your Centre Number and Candidate Number in the spaces provided on the Answer Booklet.
- Read each question carefully and make sure you know what you have to do before starting your answer.
- Answer all the questions.
- You are permitted to use a graphical calculator in this paper.
- Final answers should be given to a degree of accuracy appropriate to the context.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- The total number of marks for this paper is 72.
- You are advised that an answer may receive no marks unless you show sufficient detail of the
 working to indicate that a correct method is being used.

This document consists of 4 printed pages.

Section A (36 marks)

- 1 Solve the inequality $|2x-1| \le 3$. [4]
- 2 Find $\int xe^{3x} dx$. [4]
- 3 (i) State the algebraic condition for the function f(x) to be an even function.

What geometrical property does the graph of an even function have? [2]

- (ii) State whether the following functions are odd, even or neither.
 - (A) $f(x) = x^2 3$
 - (B) $g(x) = \sin x + \cos x$

(C)
$$h(x) = \frac{1}{x + x^3}$$
 [3]

- 4 Show that $\int_{1}^{4} \frac{x}{x^2 + 2} dx = \frac{1}{2} \ln 6.$ [4]
- 5 Show that the curve $y = x^2 \ln x$ has a stationary point when $x = \frac{1}{\sqrt{e}}$. [6]
- 6 In a chemical reaction, the mass m grams of a chemical after t minutes is modelled by the equation $m = 20 + 30e^{-0.1t}.$
 - (i) Find the initial mass of the chemical.

What is the mass of chemical in the long term? [3]

- (ii) Find the time when the mass is 30 grams. [3]
- (iii) Sketch the graph of m against t. [2]
- 7 Given that $x^2 + xy + y^2 = 12$, find $\frac{dy}{dx}$ in terms of x and y. [5]

Section B (36 marks)

8 Fig. 8 shows the curve y = f(x), where $f(x) = \frac{1}{1 + \cos x}$, for $0 \le x \le \frac{1}{2}\pi$.

P is the point on the curve with x-coordinate $\frac{1}{3}\pi$.

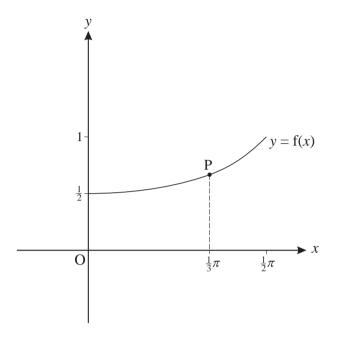

Fig. 8

- (i) Find the y-coordinate of P. [1]
- (ii) Find f'(x). Hence find the gradient of the curve at the point P. [5]
- (iii) Show that the derivative of $\frac{\sin x}{1 + \cos x}$ is $\frac{1}{1 + \cos x}$. Hence find the exact area of the region enclosed by the curve y = f(x), the *x*-axis, the *y*-axis and the line $x = \frac{1}{3}\pi$. [7]
- (iv) Show that $f^{-1}(x) = \arccos(\frac{1}{x} 1)$. State the domain of this inverse function, and add a sketch of $y = f^{-1}(x)$ to a copy of Fig. 8. [5]

[Question 9 is printed overleaf.]

© OCR 2008 4753/01 Jun08

- 9 The function f(x) is defined by $f(x) = \sqrt{4 x^2}$ for $-2 \le x \le 2$.
 - (i) Show that the curve $y = \sqrt{4 x^2}$ is a semicircle of radius 2, and explain why it is not the whole of this circle.

Fig. 9 shows a point P(a, b) on the semicircle. The tangent at P is shown.

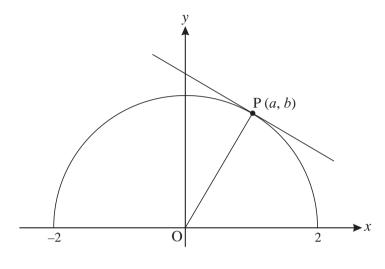

Fig. 9

- (ii) (A) Use the gradient of OP to find the gradient of the tangent at P in terms of a and b.
 - (B) Differentiate $\sqrt{4-x^2}$ and deduce the value of f'(a).
 - (C) Show that your answers to parts (A) and (B) are equivalent. [6]

The function g(x) is defined by g(x) = 3f(x-2), for $0 \le x \le 4$.

(iii) Describe a sequence of two transformations that would map the curve y = f(x) onto the curve y = g(x).

Hence sketch the curve
$$y = g(x)$$
. [6]

(iv) Show that if
$$y = g(x)$$
 then $9x^2 + y^2 = 36x$. [3]
