Core Mathematics 3 Paper J

1. Use Simpson's rule with four strips to estimate the value of the integral
$$\int_0^3 e^{\cos x}\ dx.$$

[4]

2. Giving your answers to 1 decimal place, solve the equation

$$5\tan^2 2\theta - 13\sec 2\theta = 1,$$

for θ in the interval $0 \le \theta \le 360°$.

[7]

3.

The diagram shows the curve $y = f(x)$ which has a maximum point at $(-3, 2)$ and a minimum point at $(2, -4)$.

(a) Showing the coordinates of any stationary points, sketch on separate diagrams the graphs of

    (i) $\ \ y = \left| f(x) \right|$,

[2]

    (ii) $\ \ y = 3f(2x)$.

[3]

(b) Write down the values of the constants a and b such that the curve with equation $y = a + f(x + b)$ has a minimum point at the origin O.

[2]

4. Find the values of x in the interval $-180 < x < 180$ for which

$$\tan (x + 45)° - \tan x° = 4,$$

giving your answers to 1 decimal place.

[7]

5. The finite region R is bounded by the curve with equation $y = \sqrt[3]{3x-1}$, the x-axis and the lines $x = \frac{2}{3}$ and $x = 3$.

(i) Find the area of R. [4]

(ii) Find, in terms of π, the volume of the solid formed when R is rotated through four right angles about the x-axis. [4]

6. The functions f and g are defined by

$$\text{f} : x \rightarrow 1 - ax, \quad x \in \mathbb{R},$$

$$\text{g} : x \rightarrow x^2 + 2ax + 2, \quad x \in \mathbb{R},$$

where a is a constant.

Find, in terms of a,

(i) an expression for $\text{f}^{-1}(x)$, [2]

(ii) the range of g. [3]

Given that $\text{gf}(3) = 7$,

(iii) find the two possible values of a. [4]

7. The curve with equation $y = x^{\frac{5}{2}} \ln \frac{x}{4}$, $x > 0$ crosses the x-axis at the point P.

(i) Write down the coordinates of P. [1]

The normal to the curve at P crosses the y-axis at the point Q.

(ii) Find the area of triangle OPQ where O is the origin. [6]

The curve has a stationary point at R.

(iii) Find the x-coordinate of R in exact form. [2]

8. *(i)* Solve the equation

$$\pi - 3\cos^{-1}\theta = 0.$$ [2]

(ii) Sketch on the same diagram the curves $y = \cos^{-1}(x-1)$, $0 \le x \le 2$ and
$y = \sqrt{x+2}$, $x \ge -2$. [3]

Given that α is the root of the equation

$$\cos^{-1}(x-1) = \sqrt{x+2},$$

(iii) show that $0 < \alpha < 1$, [2]

(iv) use the iterative formula

$$x_{n+1} = 1 + \cos\sqrt{x_n + 2}$$

with $x_0 = 1$ to find α correct to 3 decimal places.

You should show the result of each iteration. [3]

9. The number of bacteria present in a culture at time t hours is modelled by the continuous variable N and the relationship

$$N = 2000e^{kt},$$

where k is a constant.

Given that when $t = 3$, $N = 18\,000$, find

(i) the value of k to 3 significant figures, [3]

(ii) how long it takes for the number of bacteria present to double, giving your answer to the nearest minute, [4]

(iii) the rate at which the number of bacteria is increasing when $t = 3$. [4]
