## Challenge

a Triangles $O P B$ and $O A P$ are right-angled triangles as line $A B$ is a tangent to the unit circle at $P$.
Using triangle $O B P, O B \cos \theta=1$
$\Rightarrow O B=\frac{1}{\cos \theta}=\sec \theta$
b $\angle P O A=90^{\circ}-\theta \Rightarrow \angle O A P=\theta$
Using triangle $O A P, O A \sin \theta=1$
$\Rightarrow O A=\frac{1}{\sin \theta}=\operatorname{cosec} \theta$
c Using Pythagoras' theorem,

$$
A P^{2}=O A^{2}-O P^{2}
$$

So, $A P^{2}=\operatorname{cosec}^{2} \theta-1$ $=\frac{1}{\sin ^{2} \theta}-1$
$=\frac{1-\sin ^{2} \theta}{\sin ^{2} \theta}$
$=\frac{\cos ^{2} \theta}{\sin ^{2} \theta}$
$=\cot ^{2} \theta$
Therefore $A P=\cot \theta$
