Advanced GCE

Unit **4736**: Decision Mathematics 1

Mark Scheme for June 2011

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of pupils of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, OCR Nationals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners' meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

Mark Scheme

June 2011

1	(i)	$y \geq x$ $x + y \leq 8$ $y \leq 2x$	M1 A1	[2]	Any two boundary lines correct (any form) All three inequalities correct (any form)	Allow = or wrong inequality sign for method mark Ignore $x \geq 0, y \geq 0$, if given
	(ii)	$(2\frac{2}{3}, 5\frac{1}{3})$ $P_2 = 13\frac{1}{3}$	B1 B1	[2]	Coordinates of point A seen, cao, fractions or 2.6 to 2.7 and 5.3 to 5.4 cao, fractions or 13.3 to 13.4	Must be written down, allow $x = 2\frac{2}{3}, y = 5\frac{1}{3}$ or as decimals 2.6 to 2.7, 5.3 to 5.4 BOD if not identified as A or as optimal
	(iii) a	$m \geq 1$	B1	[2]	Condone > 1	Do not accept 1, 2, 3 ... (integer valued)
	b	$m \leq 1$	B1	[2]	Condone < 1	Do not accept 0, -1, ... (integer valued) $m = 1$ is not enough for either mark

2	(i)	<table border="1"> <tr> <td><i>R</i></td> <td><i>S</i></td> </tr> <tr> <td>8</td> <td>5</td> </tr> <tr> <td>5</td> <td>4.1</td> </tr> <tr> <td>4.1</td> <td>4.0012 (4.00)</td> </tr> <tr> <td>4.0012 (4.00)</td> <td>3.9988 (4.00)</td> </tr> </table>	<i>R</i>	<i>S</i>	8	5	5	4.1	4.1	4.0012 (4.00)	4.0012 (4.00)	3.9988 (4.00)	M1	[2]	(<i>N</i> = 16) 8, 5 and 4.1 seen	Need not be in table form
		<i>R</i>	<i>S</i>													
8	5															
5	4.1															
4.1	4.0012 (4.00)															
4.0012 (4.00)	3.9988 (4.00)															
Output 4.00		A1	[2]	Final value (of <i>R</i>) 4.00 (accept 4 or anything that rounds to 4.00)												
(ii)		<table border="1"> <tr> <td><i>R</i></td> <td><i>S</i></td> </tr> <tr> <td>1</td> <td>1.5</td> </tr> <tr> <td>1.5</td> <td>1.4167 (1.42)</td> </tr> <tr> <td>1.4167 (1.42)</td> <td>1.4142 (1.41)</td> </tr> <tr> <td>1.4142 (1.41)</td> <td>1.4142 (1.41)</td> </tr> </table>	<i>R</i>	<i>S</i>	1	1.5	1.5	1.4167 (1.42)	1.4167 (1.42)	1.4142 (1.41)	1.4142 (1.41)	1.4142 (1.41)	M1	[2]	(<i>N</i> = 2) 1, 1.5 and 1.4167 seen to at least 2 dp accuracy (ie accept 1, 1.5, 1.42)	Need not be in table form 1.4166... = $\frac{17}{12}$ as a fraction
		<i>R</i>	<i>S</i>													
1	1.5															
1.5	1.4167 (1.42)															
1.4167 (1.42)	1.4142 (1.41)															
1.4142 (1.41)	1.4142 (1.41)															
Output 1.41		A1	[2]	Final value (of <i>R</i>) 1.41 (or anything that rounds to 1.41) after 4 iterations	Watch out for truncation on <i>S</i> = 1.4167											
(iii)		Output is the square root of input (to 2 dp)	B1	[1]	Square root, $\sqrt{\quad}$, root											
(iv)		<table border="1"> <tr> <td><i>R</i></td> <td><i>S</i></td> </tr> <tr> <td>-2</td> <td>0</td> </tr> <tr> <td>0</td> <td>undefined, error or ?</td> </tr> </table>	<i>R</i>	<i>S</i>	-2	0	0	undefined, error or ?	B1	[1]	(<i>N</i> = -4) Stops when <i>R</i> = 0 (without wrong working) in second iteration (division by 0) Do not allow continuing on to further <i>R</i> values	'Division by 0' \Rightarrow B1 (without wrong working) Do not give mark for talking about square root of a negative number, unless evidence of division by 0 is also seen in working				
		<i>R</i>	<i>S</i>													
-2	0															
0	undefined, error or ?															
(v)		<table border="1"> <tr> <td><i>R</i></td> <td><i>S</i></td> </tr> <tr> <td>-1</td> <td>0.5</td> </tr> <tr> <td>0.5</td> <td>-1.75</td> </tr> <tr> <td>-1.75</td> <td>-0.3036</td> </tr> <tr> <td>-0.3036</td> <td>3.1423</td> </tr> </table>	<i>R</i>	<i>S</i>	-1	0.5	0.5	-1.75	-1.75	-0.3036	-0.3036	3.1423	B1	[2]	(<i>N</i> = -2) Values not necessarily shown, but if comments are made then they must be true for the <u>correct</u> values The values never agree (to 2 dp) Values keep changing/do not settle down Needs a stopping condition, so that algorithm works for $N \geq 0$ and stops if $N < 0$	Allow correct listed values (ignoring comments) -1, 0.5, -1.75, -0.30 ($-\frac{17}{56}$) (or better) Allow 'oscillate' Not 'use modulus of <i>N</i> ' Not suggesting changes to 'S = ' line Not 'if $N < 0$ then ...'
		<i>R</i>	<i>S</i>													
-1	0.5															
0.5	-1.75															
-1.75	-0.3036															
-0.3036	3.1423															
The algorithm does not terminate (chaotic) Build in a stopping condition, such as counting how many times step 3 has been carried out		B1	[2]													

3 (i)	Must have an even number of odd vertices Total order must be even	B1	[1]	(Cannot have) three odd vertices (It would have) three odd nodes $1.5 \div 2 = 7.5$ and cannot have half an arc	Note: graph need not be simple or connected Do not consider descriptions of specific cases
(ii)	The vertex of <u>order 5</u> would either connect to at least one of the other vertices twice or connect to itself Graph is not simple	B1 B1	[2]	Identifying that vertex of order 5 causes problem, with a valid reason ('order 5 and repeated arcs' or 'order 5 and loop') Stating 'simple' (simple cannot be achieved)	Not a description of a specific case 'simple graph with 5 vertices means no vertex can have order greater than 4' \Rightarrow B1 B1 But not if also claim graph is not connected
(iii)	5 arcs A tree with five vertices only has 4 arcs (<u>must be using number of arcs</u>)	B1 B1	[2]	$10 \div 2 = 5$ Tree has 4 arcs, or sum of vertex orders = 8 Explaining why 5 arcs means this is not a tree A tree has fewer arcs than vertices	$5 > n-1$ (but $n-1$ on its own is not enough) Not a description of a specific case
(iv)	 <p>A tree must have at least two nodes of order 1, an Eulerian graph has no odd nodes so has no nodes of order 1</p>	B1 B1	[2]	Any tree with five vertices that is a 'string' Any of: Eulerian so all even orders Eulerian so no nodes of order 1 A cycle cannot be a tree Two (or more) regions so not a tree	Any of: A tree cannot contain a cycle A tree must have at least two nodes of order 1
(v)	Would need either an Eulerian or a semi-Eulerian graph \Rightarrow 0 or 2 odd nodes, but the graph has 6 odd nodes Need to repeat 2 arcs	B1 B1	[2]	Accept 'needs 0 odd nodes' or 'needs 2 odd nodes' or both Cannot have more than 2 odd nodes 2 (allow two arcs written, using four nodes, eg <i>AB</i> and <i>CD</i>)	Condone '6 odd nodes' Condone 'all odd' [Note: route need not be a closed cycle]

<p>4 (i)</p>	<table border="1" data-bbox="220 1503 384 2024"> <thead> <tr> <th>P</th> <th>w</th> <th>x</th> <th>y</th> <th>z</th> <th>s</th> <th>t</th> <th>u</th> <th>RHS</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>3</td> <td>-5</td> <td>7</td> <td>-2</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> </tr> <tr> <td>0</td> <td>1</td> <td>2</td> <td>-2</td> <td>-1</td> <td>1</td> <td>0</td> <td>0</td> <td>10</td> </tr> <tr> <td>0</td> <td>2</td> <td>0</td> <td>3</td> <td>-4</td> <td>0</td> <td>1</td> <td>0</td> <td>12</td> </tr> <tr> <td>0</td> <td>4</td> <td>5</td> <td>1</td> <td>0</td> <td>0</td> <td>0</td> <td>1</td> <td>30</td> </tr> </tbody> </table> <p>Pivot must be chosen from a column that has a negative entry in the objective row, so pivot cannot be chosen from the w column or the y column (both)</p> <p>Pivot entry cannot be negative or zero, there are no positive entries in the z column so the pivot cannot be chosen from the z column</p>	P	w	x	y	z	s	t	u	RHS	1	3	-5	7	-2	0	0	0	0	0	1	2	-2	-1	1	0	0	10	0	2	0	3	-4	0	1	0	12	0	4	5	1	0	0	0	1	30	<p>B1</p> <p>B1</p> <p>B1</p> <p>B1</p>	<p>Objective row correct (3, -5, 7, -2)</p> <p>Constraint rows correct, with three slack variable columns</p> <p>x has a negative value (in the objective row) Identifying the value -5 BOD: x most negative (in objective row)</p> <p>Using signs of entries in columns to show that pivot cannot come from z column Identifying the values -1 and -4 Allow numbers in z column are 'negative'</p> <p>x is the only column with a negative in objective row and positives in column ⇒ B1, B1</p>	<p>Tableau may be credited if seen in part (ii), but only if not attempted in part (i)</p> <p>Rows and columns may be in any order Condone P column missing here</p> <p>Only follow through their initial tableau if it leads to x as a valid pivot column But not just: x is the minimum value in the objective row (unless also say negative)</p> <p>Only follow through their initial tableau if it leads to x as the only valid pivot column, but values on objective row led to two (or more) possible pivot columns</p> <p>x column has a negative value in objective row and positives in column ⇒ B1, B0</p>

		[5]																																															

<p>5 (i)</p>	<p> $A B C D F G$ 9.0 km </p>	<p>M1 A1 M1 A1</p>	<p>At least four sets of temporary labels (excluding A) correct with no extras All temporary labels correct with no extras At least four permanent labels correct, (excluding A) All permanent labels correct (condone blank at A) and order of labelling correct</p>	<p>Temporary labels correct at (at least four of) B, C, D, E, F, G cao May be seen as permanent labels Permanent labels correct at (at least four of) B, C, D, E, F, G cao</p>
<p>(ii)</p>	<p> $x = 3.2 + 1.4 = 4.6$ $0.9 + x + 2.5 + 1.0 = 4.4 + x$ </p>	<p>B1 B1</p>	<p>Not reversed 9</p>	<p>cao not ft, units not necessary</p>
<p>(iii)(a)</p>	<p> $x + 1.8 < 5.3 \Rightarrow x < 3.5$ Temporary labels are 6.2 and 2.7+x </p>	<p>B1 B1</p>	<p>4.6 seen (ignore what is said about it) 4.4+x</p>	<p>cao cao, not a specific case Expression must be simplified</p>
<p>(b)</p>	<p> $x + 1.4 < 3.2 \Rightarrow x < 1.8$ Temporary labels are 4.1 and 2.3+x </p>	<p>B1 B1</p>	<p>Condone 3.5 identified Condone 2.7+x without 6.2 as well Condone 1.8 identified Condone 2.3+x without 4.1 as well</p>	<p>3.5, even with wrong inequality Expressions must be simplified 1.8, even with wrong inequality Expressions must be simplified</p>
<p>(iv)</p>	<p> $20 \times \left(\frac{100}{50}\right)^2 = 80 \text{ seconds}$ </p>	<p>M1 A1</p>	<p>Correct calculation 80 (or 1 minute 20 seconds)</p>	<p>Or equivalent correct method eg $100^2 \times 0.008$ Units not necessary</p>

6 (i)	Need A and G odd so must pair C with E	B1	Recognising that <u>only</u> C and E need to be paired	May be implied from CE (CDE) seen in subsequent working (without AG) but not implied from 3.2 or from a route written
	$CE = 1.4 + 1.8 = 3.2$ Shortest route has length $29.9 + x$	M1 A1	3.2 seen, without having to look for it in a list of additions $29.9+x$	Allow $1.4 + 1.8$ seen (may be implied from 29.9) cao

For reference:

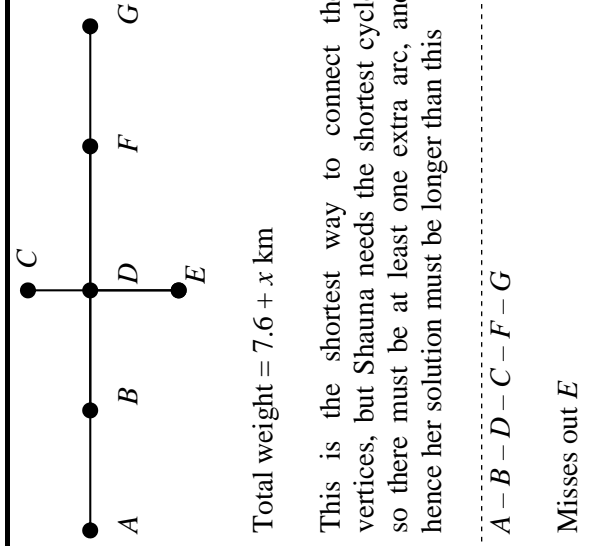

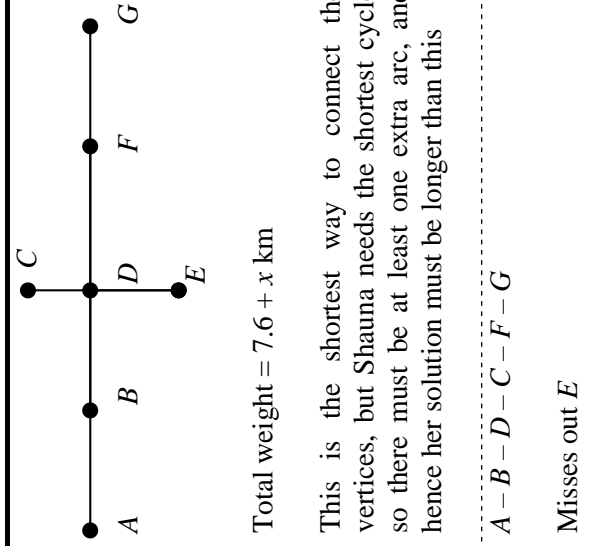

Error on question paper. If you see any evidence that a candidate has lost out through this (needs to be a substantial attempt at this part) please check with your team leader. May need to mark crossed out work, even if it has been replaced. Credit work for (a) even when labelled as $x \geq 1.8$, and similarly for (b)
