Mathematics

MFP3

Unit Further Pure 3

Monday 19 May 2014 9.00 am to 10.30 am

For this paper you must have:

- the blue AQA booklet of formulae and statistical tables.
- You may use a graphics calculator.

Time allowed

- 1 hour 30 minutes

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- Write the question part reference (eg (a), (b)(i) etc) in the left-hand margin.
- You must answer each question in the space provided for that question. If you require extra space, use an AQA supplementary answer book; do **not** use the space provided for a different question.
- Do not write outside the box around each page.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 75.

Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

J U N 1 4 M F P 3 0 1

- 2 (a)** Find the values of the constants a , b and c for which $a + b \sin 2x + c \cos 2x$ is a particular integral of the differential equation

$$\frac{dy}{dx} + 4y = 20 - 20 \cos 2x$$

[4 marks]

- (b)** Hence find the solution of this differential equation, given that $y = 4$ when $x = 0$.

[4 marks]

5 (a) Find $\int x \cos 8x \, dx$. **[3 marks]**

(b) Find $\lim_{x \rightarrow 0} \left[\frac{1}{x} \sin 2x \right]$. **[2 marks]**

(c) Explain why $\int_0^{\frac{\pi}{4}} \left(2 \cot 2x - \frac{1}{x} + x \cos 8x \right) dx$ is an improper integral. **[1 mark]**

(d) Evaluate $\int_0^{\frac{\pi}{4}} \left(2 \cot 2x - \frac{1}{x} + x \cos 8x \right) dx$, showing the limiting process used. Give your answer as a single term. **[4 marks]**

QUESTION

REFERENCE

Answer space for question 5

7 (a) It is given that $y = \ln(\cos x + \sin x)$.

(i) Show that $\frac{d^2y}{dx^2} = -\frac{2}{1 + \sin 2x}$.

[4 marks]

(ii) Find $\frac{d^3y}{dx^3}$.

[1 mark]

(b) (i) Hence use Maclaurin's theorem to show that the first three non-zero terms in the expansion, in ascending powers of x , of $\ln(\cos x + \sin x)$ are $x - x^2 + \frac{2}{3}x^3$.

[3 marks]

(ii) Write down the first three non-zero terms in the expansion, in ascending powers of x , of $\ln(\cos x - \sin x)$.

[1 mark]

(c) Hence find the first three non-zero terms in the expansion, in ascending powers of x , of $\ln\left(\frac{\cos 2x}{e^{3x}-1}\right)$.

[4 marks]

QUESTION
PART
REFERENCE

Answer space for question 7

- 8** The diagram shows a sketch of a curve C , the pole O and the initial line. The curve C intersects the initial line at the point P .

The polar equation of C is $r = (1 - \tan^2 \theta) \sec \theta$, $-\frac{\pi}{4} \leq \theta \leq \frac{\pi}{4}$.

- (a) Show that the area of the region bounded by the curve C is $\frac{8}{15}$. **[5 marks]**

- (b) The curve whose polar equation is

$$r = \frac{1}{2} \sec^3 \theta, \quad -\frac{\pi}{4} \leq \theta \leq \frac{\pi}{4}$$

intersects C at the points A and B .

- (i) Find the polar coordinates of A and B . **[3 marks]**

- (ii) Given that angle $OAP = \text{angle } OBP = \alpha$, show that $\tan \alpha = k\sqrt{3}$, where k is an integer. **[4 marks]**

- (iii) Using your value of k from part (b)(ii), state whether the point A lies inside or lies outside the circle whose diameter is OP . Give a reason for your answer. **[1 mark]**
