M1 JAN 02

- 1) $(0.3) \downarrow 8 \quad (0.3) \uparrow 6 (= -6)$ Mom before = $0.3 \times 8 = 2.4 \text{ N}\cdot\text{s}$
 Mom after = $0.3 \times 6 = -1.8 \text{ N}\cdot\text{s}$
 Impulse = $4.2 \text{ N}\cdot\text{s}$
- 2) $(1800) \rightarrow \quad (1200) \rightarrow \quad \dots \quad (3000) \rightarrow v$
 Total mom before = $1800 \times 4 = 7200 \text{ N}\cdot\text{s}$
 Total mom after = $3000v$
 $7200 = 3000v \Rightarrow v = 2.4 \text{ m}\cdot\text{s}^{-1}$
- b) Momentum before $R = 7200 \text{ N}\cdot\text{s} \Rightarrow$ Impulse = 7200
 Momentum after $R = 0$
 Impulse = force \times time $7200 = \text{Res} \times 8$
 $\text{Res} = 900 \text{ N}$
- 3) $u = 12 \quad v = 60 \quad t = 4$
 $v = u + at \Rightarrow 60 = 12 + 4a \Rightarrow 4a = 48 \Rightarrow a = 12 \text{ m}\cdot\text{s}^{-2}$
 b) $s = \frac{(u+v)t}{2} \Rightarrow s = \frac{72 \times 4}{2} = 144 \text{ m}$
 c) $u = 12 \quad s = 72 \quad a = 12$
 $v^2 = u^2 + 2as \Rightarrow v^2 = 144 + 24 \times 72 \Rightarrow v = 43.3 \text{ m}\cdot\text{s}^{-1}$

- 4)  b) 
- c)  $\frac{(35+45) \times v}{2} = 850$
 $80v = 1700 \Rightarrow v = 21.25 \text{ m}\cdot\text{s}^{-1}$
- 5)  $R_f \uparrow = 0 \Rightarrow 4T = 400 + W$
 $\text{A} \downarrow W \times 5 + 250 \times 10 = T \times 1 + 3T \times 10$
 $5W + 2500 = 22T$
 $W = 4T - 400 \Rightarrow 5W = 20T - 2000$
 $\Rightarrow 20T - 2000 + 2500 = 22T$
 $2T = 500 \Rightarrow T = 250 \text{ N}$
 c) $W = 4(250) - 400 = 600 \text{ N}$
 d) weight acts at the middle of the girder.

- 6) $R_f = (6i + 2j) + (3i - 5j) = 9i - 3j \text{ N}$
- b)  angle = $90 + A$
 $= 90 + \tan^{-1}(\frac{3}{9})$
 $= 108^\circ$
- c) acc = $\frac{\text{change in vel}}{\text{time}} \Rightarrow R_f = ma$
 $(9i - 3j) = 3a \quad a = 3i - j \text{ m}\cdot\text{s}^{-2}$
- d) Vel = (Initial vel) + t(acc)
 $\text{Vel} = (-2i + j) + 2(3i - j) = 4i - j \text{ m}\cdot\text{s}^{-1}$
 $= \sqrt{4^2 + 1^2} = 4.12 \text{ m}\cdot\text{s}^{-1}$
- 7)  $\tan \alpha = \frac{3}{4}$
 $\frac{3}{4} \quad \sin \alpha = \frac{3}{5} \quad \cos \alpha = \frac{4}{5}$
 $NR = 2.5 \times \frac{3}{5} + 0.3g = 4.44 \text{ N}$
 $f_{\text{max}} = \mu NR \Rightarrow f_{\text{max}} = 4 \times 4.44 \mu$
 $R_f = 0 \Rightarrow 2.5 \times \frac{4}{5} = f_{\text{max}} \Rightarrow f_{\text{max}} = 2$
 $\mu = \frac{2}{4.44} = 0.45$

- b)  $NR = 0.3g - 2.5 \times \frac{3}{5}$
 $NR = 1.44$
 $f_{\text{max}} = \mu NR = 0.6 \text{ S N}$
 $2.5 \cos \alpha = 2.5 \times \frac{4}{5} = 2 \text{ N}$
 So the ring will move since $R_f = 1.35 \text{ N}$
- 8)  $\text{P) } T - f_{\text{max}} = 3ma$
 $\text{Q) } 5mg - T = 5ma$
 $5mg - f_{\text{max}} = 8ma$
 $5mg - 1.8mg = 8ma$
 $3.2g = 8a$
 $a = \frac{3.2}{8}g = \frac{2}{5}g \text{ m}\cdot\text{s}^{-2}$
- P) $NR = 3mg$
 $f_{\text{max}} = \mu NR = 1.8mg$
 c) $T = 3ma + f_{\text{max}}$
 $T = 3m \times \frac{2}{5}g + 1.8mg = 3mg \text{ N}$
- d) $u \downarrow = 0 \quad v^2 = u^2 + 2as$
 $a \downarrow = \frac{2}{5}g \quad v^2 = \frac{4}{5}gh$
 $S = h \quad v = \sqrt{\frac{4}{5}gh} \text{ m}\cdot\text{s}^{-1}$
 $u = \sqrt{\frac{4}{5}gh} \quad v = 0 \quad a = -0.6g$
 $v^2 = u^2 + 2as \Rightarrow 0 = \frac{4}{5}gh - 1.2gs$
 $S = \frac{4gh}{1.2g} = \frac{10}{3}h$
