## Unit Mechanics 2B

Friday 18 June 2010 1.30 pm to 3.00 pm

**For this paper you must have:**

- the blue AQA booklet of formulae and statistical tables.
- You may use a graphics calculator.

**Time allowed**

- 1 hour 30 minutes

**Instructions**

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- Write the question part reference (eg (a), (b)(i) etc) in the left-hand margin.
- You must answer the questions in the spaces provided. Do not write outside the box around each page.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.
- The **final** answer to questions requiring the use of calculators should be given to three significant figures, unless stated otherwise.
- Take  $g = 9.8 \text{ m s}^{-2}$ , unless stated otherwise.

**Information**

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 75.

**Advice**

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.

Answer **all** questions in the spaces provided.

**1** A particle moves along a straight line through the origin. At time  $t$ , the displacement,  $s$ , of the particle from the origin is given by

$$s = 5t^2 + 3 \cos 4t$$

Find the velocity of the particle at time  $t$ . (3 marks)

QUESTION  
PART  
REFERENCE

Area with horizontal dotted lines for writing the answer.

**2** John is at the top of a cliff, looking out over the sea. He throws a rock, of mass 3 kg, horizontally with a velocity of  $4 \text{ m s}^{-1}$ .

The rock falls a vertical distance of 51 metres to reach the surface of the sea.

- (a)** Calculate the kinetic energy of the rock when it is thrown. *(2 marks)*
- (b)** Calculate the potential energy lost by the rock when it reaches the surface of the sea. *(2 marks)*
- (c) (i)** Find the kinetic energy of the rock when it reaches the surface of the sea.
- (ii)** Hence find the speed of the rock when it reaches the surface of the sea. *(4 marks)*
- (d)** State one modelling assumption which has been made. *(1 mark)*

QUESTION  
PART  
REFERENCE

**4** A particle has mass 200 kg and moves on a smooth horizontal plane. A single horizontal force,  $\left(400 \cos\left(\frac{\pi}{2} t\right) \mathbf{i} + 600t^2 \mathbf{j}\right)$  newtons, acts on the particle at time  $t$  seconds.

The unit vectors  $\mathbf{i}$  and  $\mathbf{j}$  are directed east and north respectively.

**(a)** Find the acceleration of the particle at time  $t$ . (2 marks)

**(b)** When  $t = 4$ , the velocity of the particle is  $(-3\mathbf{i} + 56\mathbf{j}) \text{ m s}^{-1}$ .

Find the velocity of the particle at time  $t$ . (5 marks)

**(c)** Find  $t$  when the particle is moving due west. (3 marks)

**(d)** Find the speed of the particle when it is moving due west. (2 marks)

QUESTION  
PART  
REFERENCE

- 5 A particle is moving along a straight line. At time  $t$ , the velocity of the particle is  $v$ . The acceleration of the particle throughout the motion is  $-\frac{\lambda}{v^4}$ , where  $\lambda$  is a positive constant. The velocity of the particle is  $u$  when  $t = 0$ .

Find  $v$  in terms of  $u$ ,  $\lambda$  and  $t$ .

(7 marks)

QUESTION  
PART  
REFERENCE

QUESTION  
PART  
REFERENCE

Area with horizontal dotted lines for writing.

**END OF QUESTIONS**

**There are no questions printed on this page**

**DO NOT WRITE ON THIS PAGE  
ANSWER IN THE SPACES PROVIDED**
