## Paper 1

Wednesday 15 May 2019

Morning

Time allowed: 1 hour 30 minutes

### Materials

- You must have the AQA Formulae for A-level Mathematics booklet.
- You should have a graphical or scientific calculator that meets the requirements of the specification.

### Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer each question in the space provided for that question. If you require extra space, use an AQA supplementary answer book; do **not** use the space provided for a different question.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.

### Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

**10** On 18 March 2019 there were 12 hours of daylight in Inverness.

On 16 June 2019, 90 days later, there will be 18 hours of daylight in Inverness.

Jude decides to model the number of hours of daylight in Inverness,  $N$ , by the formula

$$N = A + B \sin t^\circ$$

where  $t$  is the number of days after 18 March 2019.

**10 (a) (i)** State the value that Jude should use for  $A$ .

**11** A ball moves in a straight line and passes through two fixed points,  $A$  and  $B$ , which are  $0.5\text{ m}$  apart.

The ball is moving with a constant acceleration of  $0.39\text{ m s}^{-2}$  in the direction  $AB$ .

The speed of the ball at  $A$  is  $1.9\text{ m s}^{-1}$

Find the speed of the ball at  $B$ .

Circle your answer.

**12** A particle  $P$ , of mass  $m$  kilograms, is attached to one end of a light inextensible string.

The other end of this string is held at a fixed position,  $O$ .

$P$  hangs freely, in equilibrium, vertically below  $O$ .

Identify the statement below that correctly describes the tension,  $T$  newtons, in the string as  $m$  varies.

Tick (✓) **one** box.

[1 mark]

$T$  varies along the string, with its greatest value at  $O$

$T$  varies along the string, with its greatest value at  $P$

$T = 0$  because the system is in equilibrium

$T$  is directly proportional to  $m$
