# A-level **MATHEMATICS**

Paper 3

Please note that question 16 uses the original Large Data Set "Family Food". This was replaced by the data set "Transport Stock Vehicle Database" in A-level exams from June 2020. If you'd like to see the original data set, please contact maths@aqa.org.uk.

Friday 14 June 2019

Afternoon

Time allowed: 2 hours

### **Materials**

- You must have the AQA Formulae for A-level Mathematics booklet.
- You should have a graphical or scientific calculator that meets the requirements of the specification.

### Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer each question in the space provided for that question.
   If you require extra space, use an AQA supplementary answer book; do not use the space provided for a different question.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

## Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 100.

### Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet
- You do not necessarily need to use all the space provided.

# Section A

Answer **all** questions in the spaces provided.

State the maximum possible domain of f

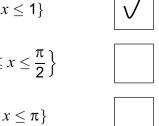

Tick (✓) one box.

$$\left\{x \in \mathbb{R} : -1 \le x \le 1\right\}$$

$$\left\{x \in \mathbb{R} : -\frac{\pi}{2} \le x \le \frac{\pi}{2}\right\}$$

$$\{x \in \mathbb{R}: -\pi \le x \le \pi\}$$

$$\{x \in \mathbb{R}: -90 \le x \le 90\}$$

Find the value of 
$$\frac{100!}{98! \times 3!} = \frac{100!}{98! \times 3!} = \frac{100 \times 99 \times 98!}{98! \times 6} = \frac{99 \times 100}{6} = 1650$$

Circle your answer.

[1 mark]

161700

[1 mark]

3 Given  $u_1 = 1$ , determine which one of the formulae below defines an increasing sequence for  $n \ge 1$ 

Circle your answer.

[1 mark]

$$u_{n+1} = 1 + \frac{1}{u_n}$$
  $u_n = 2 - 0.9^{n-1}$   $u_{n+1} = -1 + 0.5u_n$   $u_n = 0.9^{n-1}$ 
 $u_n = 2$ 
 $u_1 = 1$ 
 $u_2 = 1.5$   $u_2 = 1.25$   $u_3 = 0.9$ 

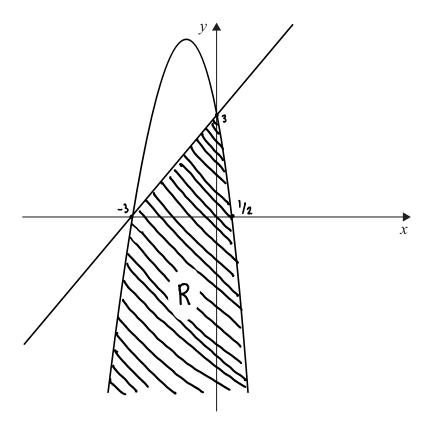

2

4 Sketch the region defined by the inequalities

$$y \le (1 - 2x)(x + 3)$$
 and  $y - x \le 3$ 

Clearly indicate your region by shading it in and labelling it R.

[3 marks]

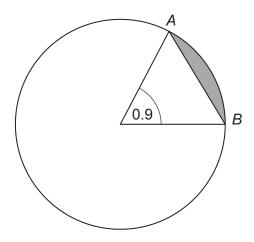

Turn over for the next question

**5** A circle has equation  $x^2 + y^2 - 6x - 8y = 264$ 

AB is a chord of the circle.

The angle at the centre of the circle, subtended by AB, is 0.9 radians, as shown in the diagram below.

Find the area of the minor segment shaded on the diagram.

Give your answer to three significant figures.

[5 marks]

$$x^2 + y^2 - 6x - 8y = 264$$

$$x^2 - 6x + y^2 - 8y = 264$$

$$(x-3)^2 - 9 + (y-4)^2 - 16 = 264$$

$$(x-3)^2 + (y-4)^2 = 289$$

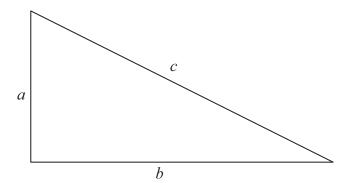

Area of sector = 
$$\frac{1}{2}r^2\theta$$

$$= \frac{1}{2} \times 17^2 \times 0.9$$

Area of triangle within the sector = 
$$\frac{1}{2} \times r^2 \times \sin \theta$$

$$= \frac{1}{2} \times 17^2 \times \sin 0.9$$

**6** The three sides of a right-angled triangle have lengths a, b and c, where a, b,  $c \in \mathbb{Z}$ 

**6 (a)** State an example where a, b and c are all even.

ľ	1	n	n	a	r	k1	ı

α =	6.	b= 8	C = 10
			,

**6 (b)** Prove that it is **not** possible for all of a, b and c to be odd.

[3 marks]

Assume		and	ь	ore	odd.	Then	Q = 20 +1
--------	--	-----	---	-----	------	------	-----------

b=2m+1.

$$(a^2 + b^2 = (2n+1)^2 + (2m+1)^2$$

$$\frac{1}{2}$$
  $4n^2 + 4n + 1 + 4m^2 + 4m + 1$ 

$$= 2 (2n^2 + 2n + 2m^2 + 2n + 1)$$

So a2 + 62 is even which means (2 is even so c is even

Therefore, a, b and c cannot all be odd.

Turn over for the next question

7 (a) Express 
$$\frac{4x+3}{(x-1)^2}$$
 in the form  $\frac{A}{x-1} + \frac{B}{(x-1)^2}$ 

[3 marks]

$$\frac{4x+3}{(x-1)^2} = \frac{A}{(x-1)} + \frac{B}{(x-1)^2}$$

$$A(x-1) + B = 4x+3$$

Let 
$$x=1: B=7$$

Let 
$$x=2: A+B=11 \Rightarrow A=11-7 \Rightarrow A=4$$

$$\frac{S_0}{(x-1)^2} = \frac{4}{(x-1)} + \frac{7}{(x-1)^2}$$

7 (b) Show that

$$\int_{3}^{4} \frac{4x+3}{(x-1)^{2}} \, \mathrm{d}x = p + \ln q$$

where p and q are rational numbers.

 $\int_{3}^{4} \frac{4x+3}{(x-1)^{2}} dx = \int_{3}^{4} \left( \frac{4}{(x-1)} + \frac{7}{(x-1)^{2}} \right) dx$ 

[5 marks]

$$= \left[4\ln(x-1) - 7(x-1)^{-1}\right]_{3}^{4}$$

$$= 4 \ln 3 - 4 \ln 2 + \frac{7}{6}$$

$$=4\ln\frac{3}{2}+\frac{7}{6}$$

$$= \ln \frac{3^4}{2^4} + \frac{7}{6}$$

$$= \ln \frac{81}{16} + \frac{7}{6}$$

$$= \ln \frac{81}{16} + \frac{7}{6}$$
 so  $\rho = \frac{7}{6}$ ,  $q = \frac{81}{16}$ .

Turn over for the next question

A student is conducting an experiment in a laboratory to investigate how quickly liquids cool to room temperature.

A beaker containing a hot liquid at an initial temperature of 75 °C cools so that the temperature,  $\theta$  °C, of the liquid at time t minutes can be modelled by the equation

$$\theta = 5(4 + \lambda e^{-kt})$$

where  $\lambda$  and k are constants.

After 2 minutes the temperature falls to 68 °C.

8 (a) Find the temperature of the liquid after 15 minutes.

Give your answer to three significant figures.

[7 marks]

$$\theta = 5 (4 + \lambda e^{-kt})$$

$$68 = 5(4 + 11e^{-2k})$$

$$e^{-2k} = \frac{48}{55}$$

$$-2K = ln \left(\frac{48}{55}\right)$$

$$k = \frac{1}{2} \ln \left( \frac{55}{48} \right) \implies \kappa = 0.068066$$

0=5 (4+11e-0.068066t)

After 15 minutes:

0 = 5 (4+ 11e-0.068066×15)

0 = 39.813...

Ø=39.8 (3.5.4)

Do	not	writ
ou	tside	e the
	ho	×

(1)(1)	Find the room temperature of the laboratory, giving a reason for your answer.  [2 marks]
	As t increases, the temperature that the model predicts will approach room temperature.
8 (b) (ii)	Find the time taken in minutes for the liquid to cool to 1 °C above the room temperature of the laboratory.  [2 marks]
	5(4 + 11e <sup>-0.0630661</sup> )=21
	4 + 11e-0.0680666 = 21 5
	-0.068066f =  n (55)
	<u> </u>
8 (c)	Explain why the model might need to be changed if the experiment was conducted in a different place.
	The temperature of the new com may be different.
	Turn over for the next question
	1 000 0 1 00 000 quantum

9	A curve has	equation
9	/ Cui ve Has	cquation

$$x^2y^2 + xy^4 = 12$$

9 (a) Prove that the curve does not intersect the coordinate axes.

[2 marks]

When 
$$x = 0$$
:  $0^2y^2 + 0y^4 = 0$ 

When 
$$y=0: x^2 0^2 + x 0^4 = 0$$

This contradicts the fact that  $x^2y^2 + xy^4 = 12$  so the curve does not

intersect either the x or y axis.

**9 (b) (i)** Show that  $\frac{dy}{dx} = -\frac{2xy + y^3}{2x^2 + 4xy^2}$ 

[5 marks]

$$x^2y^2 + xy^4 = 12$$

Implicit differentiation: 
$$2xy^2 + 2x^2y dy + y^4 + 4xy^3 dy = 0$$

$$\frac{dy = -2xy - y^3}{dx}$$

$$\frac{dy = -\frac{2xy + y^3}{2x^2 + 4xy^2}$$

[4 marks]

9	(b) (ii)	Prove that the curve has no stationary points.	
---	----------	--	--

Stationary points occur when dy = 0:

$$\Rightarrow y^2 = -2x \qquad (we know y \neq 0 by (a))$$

$$x^2y^2 + x(-2x)y^2 = 12$$

As -x2y2<0 there are no stationary points as -x2y2 cannot equal 12.

**9 (b) (iii)** In the case when x > 0, find the equation of the tangent to the curve when y = 1

When 
$$y=1$$
,  $x^2 + x = 12$ 

$$\Rightarrow x^2 + x - 12 = 0$$

$$\Rightarrow (x+4)(x-3)=0$$

$$\Rightarrow x=3$$
 or  $x=-4$ 

For the case of 
$$x>0$$
 we take  $x=3$ .

At 
$$(3,1)$$
,  $dy = -\frac{2(3)(1)+1}{2(3)^2+4(3)(1)}$ 

Equation of tangent at (3,1):  $y-1=-\frac{7}{30}(x-3)$ 

$$y = -\frac{7}{30} \times + \frac{17}{10}$$

13	Patrick is practising his skateboarding skills. On each day, he has 30 attempts at performing a difficult trick.
	Every time he attempts the trick, there is a probability of 0.2 that he will fall off his skateboard.
	Assume that the number of times he falls off on any given day may be modelled by a binomial distribution.
13 (a) (i)	Find the mean number of times he falls off in a day.  [1 mark]
	X~B(30, 0.2) where X is the number of times he falls.
	$Mean = 30 \times 0.2 = 6$
13 (a) (ii)	Find the variance of the number of times he falls off in a day.  [1 mark]
	Variance = $30 \times 0.2 \times (1-0.2)$
	- 4.8
13 (b) (i)	Find the probability that, on a particular day, he falls off exactly 10 times.  [2 marks]
	X~B(30, 0.2)
	$P(\chi=10) = {\binom{30}{10}} 0.2^{10} 0.8^{20}$
	= 0.0355 (3.s.f)

13 (b) (ii)	Find the probability that, on a particular day, he falls off 5 or more times.  [3 marks]
	X~ B(30,0.2)
	P(X=5) = 1- P(X =4)
	= 1 - P(X=4) - P(X=3) - P(X=2) - P(X=1) - P(X=0)
	$= 1 - {\binom{30}{4}} \cdot 0.2^{4} \times 0.8^{26} - {\binom{30}{3}} \cdot 0.2^{3} \times 0.8^{27} - {\binom{30}{2}} \cdot 0.2^{2} \times 0.8^{28} - {\binom{30}{1}} \cdot 0.2 \times 0.8^{29} - {\binom{30}{0}} \cdot 0.8^{30}$
	<u> </u>
	= 0. 745 (3. s.f)
13 (c)	Patrick has 30 attempts to perform the trick on each of 5 consecutive days.
13 (c) (i)	Calculate the probability that he will fall off his skateboard at least 5 times on each of the 5 days.  [2 marks]
	P(X≥5)= 0.745
	The probability that he will fall off at least 5 times on 5 consecutive days is:
	0.745 = 0.229
13 (c) (ii)	Explain why it may be unrealistic to use the same value of 0.2 for the probability of falling off for all 5 days.  [1 mark]
	Probability may change as Patrick practices and improves.
	Turn over for the next question

Do not write outside the box

14 A survey was conducted into the health of 120 teachers.

The survey recorded whether or not they had suffered from a range of four health issues in the past year.

In addition, their physical exercise level was categorised as low, medium or high.

50 teachers had a low exercise level, 40 teachers had a medium exercise level and 30 teachers had a high exercise level.

The results of the survey are shown in the table below.

	Low exercise	Medium exercise	High exercise
Back trouble	14	7	10
Stress	38	14	5
Depression	9	2	1
Headache/Migraine	4	5	5

**14 (a)** Find the probability that a randomly selected teacher:

14 (a) (i) suffers from back trouble and has a high exercise level;

[1 mark]	

14 (a) (ii) suffers from depression.

10 120

	Since 52 > 50, some people must suffer from both and therefore	? the
	events cannot be mutually exclusive.	

Turn over for the next question

Jamal, a farmer, claims that the larger the rainfall, the greater the yield of wheat from his farm.

He decides to investigate his claim, at the 5% level of significance.

He measures the rainfall in centimetres and the yield in kilograms for a random sample of ten years.

He correctly calculates the product moment correlation coefficient between rainfall and yield for his sample to be 0.567

The table below shows the critical values for correlation coefficients for a sample size of 10 for different significance levels, for both 1- and 2-tailed tests.

1-tailed test significance level	(5%)	2.5%	1%	0.5%
2-tailed test significance level	10%	5%	2%	1%
Critical value	0.549	0.632	0.716	0.765

Determine what Jamal's conclusion to his investigation should be, justifying your answer.

[3 marks]

Jamal is interested in the critical value at the 1-tailed
test significance level. The critical value is 0.549.
Since 0.567 > 0.549 there is sufficient evidence that the
larger the rainfall, the greater the yield of wheat
Target the rantom, the greater the great of wheat

	_			•							

**16 (b)** It is known that the mean amount of sugar purchased per person in England in 2014 was 78.9 grams, with a standard deviation of 25.0 grams.

In 2018, a sample of 918 people had a mean of 80.4 grams of sugar purchased per person.

Investigate, at the 5% level of significance, whether the mean amount of sugar purchased per person in England has changed between 2014 and 2018.

Assume that the survey data is a random sample taken from a normal distribution and that the standard deviation has remained the same.

[6 marks]

Ho: M= 78.9

H1: M = 78.9

Significance level 5% (test 2.5% significance at each tail)

For the sample of 918 people, M = 78.9 and 0 = 25

Test statistic =  $\frac{80.4 - 78.9}{25}$  = 1.82

Since 1.82>0 we only need to check upper critical region.

For upper critical & value:

P(Z 4 =) = (1 - 0.025)

0 1.82 1.96

 $P(Z \angle Z) = 0.975 \Rightarrow Z = 1.96$  is the upper critical value.

Since 1.82 4 1.96 we accept Ho. There is insufficient

evidence to suggest that the mean amount of purchased

sugar has changed.

Question 16 continues on the next page

17 Elizabeth's Bakery makes brownies.

It is known that the mass, X grams, of a brownie may be modelled by a normal distribution.

10% of the brownies have a mass less than 30 grams.

80% of the brownies have a mass greater than 32.5 grams.

17 (a) Find the mean and standard deviation of X.

[7 marks]

X = mass of a brownie

 $X \sim N(\mu, \sigma^2)$ 

P(X - 30) = 0.1

P(X > 32.5) = 0.8

P(Z 4 30-M) = 0.1

 $\Rightarrow$  2 = -1.2816

-1.2816 = 30 - M

μ - 1·2816σ = 30 ①

P(Z > 32.5 - M) = 0.8

⇒ 足 = -0.8416

-0.8416 = <u>32.5 - м</u>

M - 0.84160 = 32.5 2

② - ①: 0.44  $\sigma$  = 2.5 ⇒  $\sigma$  = 5.68

Substitute == 5.68 into 10: M = 30 + 1.2816 (5.68)

μ = 37.3

So,  $\mu = 37.3$  and  $\sigma = 5.68$ .
