Paper 2 Pure Mathematics 2

**October/November 2023**

**1 hour 15 minutes**

You must answer on the question paper.

You will need: List of formulae (MF19)

### INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

### INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [ ].

This document has **12** pages.

## 2

- 1 It is given that  $\theta$  is an acute angle in degrees such that  $\sin \theta = \frac{2}{3}$ .

Find the exact value of  $\sin(\theta + 60^\circ)$ .

5 The polynomial  $p(x)$  is defined by

$$p(x) = 6x^3 + ax^2 + bx - 20,$$

where  $a$  and  $b$  are constants. It is given that  $(x + 2)$  is a factor of  $p(x)$  and that the remainder is  $-11$  when  $p(x)$  is divided by  $(x + 1)$ .

(a) Find the values of  $a$  and  $b$ . [5]
