Paper 6 Probability & Statistics 2

October/November 2024

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has **12** pages. Any blank pages are indicated.

- 1 The heights of a certain species of deer are known to have standard deviation 0.35 m. A zoologist takes a random sample of 150 of these deer and finds that the mean height of the deer in the sample is 1.42 m.

(a) Calculate a 96% confidence interval for the population mean height. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (b) Bubay says that 96% of deer of this species are likely to have heights that are within this confidence interval.

Explain briefly whether Bubay is correct. [1]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

- 3 The times, T minutes, taken by a random sample of 75 students to complete a test were noted. The results were summarised by $\sum t = 230$ and $\sum t^2 = 930$.

(a) Calculate unbiased estimates of the population mean and variance of T . [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

You should now assume that your estimates from part (a) are the true values of the population mean and variance of T .

- (b) The times taken by another random sample of 75 students were noted, and the sample mean, $\bar{T}$, was found.

Find the value of a such that $P(\bar{T} > a) = 0.234$. [3]

4 A random variable X has probability density function f defined by

$$f(x) = \begin{cases} \frac{a}{x^2} - \frac{18}{x^3} & 2 \leq x \leq 3, \\ 0 & \text{otherwise,} \end{cases}$$

where a is a constant.

(a) Show that $a = \frac{27}{2}$. [3]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(b) Show that $E(X) = \frac{27}{2} \ln \frac{3}{2} - 3$. [3]
