Paper 5 Mechanics 2 (M2)

**October/November 2019**

**1 hour 15 minutes**

Candidates answer on the Question Paper.

Additional Materials: List of Formulae (MF9)

**READ THESE INSTRUCTIONS FIRST**

Write your centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

**DO NOT WRITE IN ANY BARCODES.**

Answer **all** the questions in the space provided. If additional space is required, you should use the lined page at the end of this booklet. The question number(s) must be clearly shown.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

Where a numerical value for the acceleration due to gravity is needed, use  $10 \text{ m s}^{-2}$ .

The use of an electronic calculator is expected, where appropriate.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

The total number of marks for this paper is 50.

This document consists of **12** printed pages.

## 3

- 2 A small ball is projected from a point  $O$  on horizontal ground at an angle of  $30^\circ$  above the horizontal. At time  $t$  s after projection the horizontal and vertically upwards displacements of the ball from  $O$  are  $x$  m and  $y$  m respectively. It is given that  $x = 40t$ .

(i) Calculate the initial speed of the ball, and express  $y$  in terms of  $t$ . [3]

- 4 A particle is projected from a point  $O$  on horizontal ground with speed  $V \text{ m s}^{-1}$  at an angle of  $60^\circ$  above the horizontal. At the instant 3 s after projection the direction of motion of the particle is  $30^\circ$  below the horizontal.

(i) Find  $V$ . [3]
