Paper 5 Mechanics 2 (M2)

**For Examination from 2017**

SPECIMEN PAPER

**1 hour 15 minutes**

Candidates answer on the Question Paper.

Additional Materials: List of Formulae (MF9)

**READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

**DO NOT WRITE IN ANY BARCODES.**

Answer **all** the questions.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

Where a numerical value for the acceleration due to gravity is needed, use  $10 \text{ m s}^{-2}$ .

The use of an electronic calculator is expected, where appropriate.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

The total number of marks for this paper is 50.

This document consists of **11** printed pages and **1** blank page.

## 3

- 2 One end of a light inextensible string of length 0.5 m is attached to a fixed point  $A$ . A particle  $P$  of mass 0.2 kg is attached to the other end of the string.  $P$  moves with constant speed in a horizontal circle with centre  $O$  which is 0.4 m vertically below  $A$ .

(i) Show that the tension in the string is 2.5 N. [2]

4

A particle  $P$  of mass  $0.4\text{ kg}$  moves with constant speed in a horizontal circle on the smooth inner surface of a fixed hollow hemisphere with centre  $O$  and radius  $0.5\text{ m}$  (see diagram).

- (i) Given that the speed of the particle is  $4\text{ m s}^{-1}$  and its angular speed is  $10\text{ rad s}^{-1}$ , calculate the angle between  $OP$  and the vertical. [2]

.....

.....

.....

.....

- (ii) Given instead that the magnitude of the force exerted on  $P$  by the hemisphere is  $6\text{ N}$ , calculate
- (a) the angle between  $OP$  and the vertical, [2]

.....

.....

.....

.....

.....

- (b) the angular speed of  $P$ . [3]

.....

.....

.....

.....

.....

.....

- 7 A particle  $P$  of mass  $M$  kg is attached to one end of a light elastic string of natural length 0.8 m and modulus of elasticity 12.5 N. The other end of the string is attached to a fixed point  $A$ . The particle is released from rest at  $A$  and falls vertically until it comes to instantaneous rest at the point  $B$ . The greatest speed of  $P$  during its descent is  $4.4 \text{ m s}^{-1}$  when the extension of the string is  $e$  m.

(i) Show that  $e = 0.64M$ . [2]

.....

.....

.....

.....

.....

.....

.....

.....

(ii) Find a second equation in  $e$  and  $M$ , and hence find  $M$ . [6]
