

# Mark Scheme (Results)

Summer 2024

Pearson Edexcel GCE  
In AS Further Mathematics (8FM0)  
Paper 28 Decision Mathematics 2

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk). Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

## **Pearson: helping people progress, everywhere**

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk)

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

## EDEXCEL GCE MATHEMATICS

### General Instructions for Marking

1. The total number of marks for the paper is 40.
2. The Edexcel Mathematics mark schemes use the following types of marks:
  - **M** marks: method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
  - **A** marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
  - **B** marks are unconditional accuracy marks (independent of M marks)
  - Marks should not be subdivided.
3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod – benefit of doubt
  - ft – follow through
  - the symbol  $\checkmark$  will be used for correct ft
  - cao – correct answer only
  - cso - correct solution only. There must be no errors in this part of the question to obtain this mark
  - isw – ignore subsequent working
  - awrt – answers which round to
  - SC: special case
  - oe – or equivalent (and appropriate)
  - dep – dependent
  - indep – independent
  - dp decimal places
  - sf significant figures
  - \* The answer is printed on the paper
  - $\square$  The second mark is dependent on gaining the first mark
4. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
  5. Where a candidate has made multiple responses and indicates which response they wish to submit, examiners should mark this response.  
If there are several attempts at a question which have not been crossed out, examiners should mark the final answer which is the answer that is the most complete.

6. Ignore wrong working or incorrect statements following a correct answer.
7. Mark schemes will firstly show the solution judged to be the most common response expected from candidates. Where appropriate, alternative answers are provided in the notes. If examiners are not sure if an answer is acceptable, they will check the mark scheme to see if an alternative answer is given for the method used.

Question	Scheme	Marks	AOs
<b>1 (a)</b>	Initial Flow = 90	B1	1.1b
		<b>(1)</b>	
<b>(b)</b>	The maximum flow into C is 35. Maximum flow in CD is 21 and maximum flow in CG is 19. $35 < 21 + 19$ and therefore CD and CG cannot both be saturated	B1	2.4
		<b>(1)</b>	
<b>(c)</b>	(i) $26+18+24+21+19 = 108$ (ii) $24+19+17+14+40 = 114$	B1 B1	1.1b 1.1b
		<b>(2)</b>	
<b>(d)</b>	SBFJT (+6)	B1	1.1b
		<b>(1)</b>	
<b>(e)</b>	Use of max-flow min-cut theorem Identification of cut through EH EF BF DJ DG and CG Capacity of cut = 96 Therefore it follows that flow is maximal	M1 A1 A1	2.1 3.1a 2.2a
		<b>(3)</b>	
		<b>(8 marks)</b>	

**Notes:****(a)****B1:** CAO**(b)****B1:** CAO (as a minimum accept: max inflow to C = 35 and max outflow = 40 and  $35 < 40$ )**(c)****(i) B1:** CAO**(ii) B1:** CAO**(d)****B1:** Correct flow augmenting route found from S to T**(e)****M1:** Construct argument based on max-flow min-cut theorem (e.g. attempt to find a cut through **saturated** arcs) Cut must be drawn or listed as arcs not values (condone omission of EF for M1 only)**A1:** Use appropriate process of finding a minimum cut (both cut and value correct)**A1:** Correct deduction that the flow is maximal (dependent on previous A mark) (must use all four words **Max Flow = Min Cut**)
