Pearson Edexcel International Advanced Subsidiary Level In Further Pure Mathematics F1 (WFM01) Paper 01

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

June 2018 Publications Code All the material in this publication is copyright © Pearson Education Ltd 2018 General Marking Guidance

• All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.

• Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.

• Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.

• There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.

• All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.

• Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.

• When examiners are in doubt regarding the **application of the mark scheme to a candidate's** response, the team leader must be consulted.

• Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

# PEARSON EDEXCEL IAL MATHEMATICS

## General Instructions for Marking

- 1. The total number of marks for the paper is 75
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
- M marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- B marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.
- 3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol  $\sqrt{}$  will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- o.e. or equivalent (and appropriate)
- d... or dep dependent
- indep independent
- dp decimal places
- sf significant figures
- \* The answer is printed on the paper or ag- answer given
- \_ or d... The second mark is dependent on gaining the first mark

- 4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.
- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
- 6. If a candidate makes more than one attempt at any question:
  - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
  - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer.

# General Principles for Further Pure Mathematics Marking

(But note that specific mark schemes may sometimes override these general principles).

#### Method mark for solving 3 term quadratic:

### 1. Factorisation

$$(x^2 + bx + c) = (x + p)(x + q)$$
, where  $|pq| = |c|$ , leading to  $x = \dots$ 

$$(ax^2 + bx + c) = (mx + p)(nx + q)$$
, where  $|pq| = |c|$  and  $|mn| = |a|$ , leading to  $x = ...$ 

### 2. Formula

Attempt to use the correct formula (with values for a, b and c).

### 3. Completing the square

Solving 
$$x^2 + bx + c = 0$$
:  $\left(x \pm \frac{b}{2}\right)^2 \pm q \pm c = 0$ ,  $q \neq 0$ , leading to  $x = \dots$ 

### Method marks for differentiation and integration:

#### 1. Differentiation

Power of at least one term decreased by 1.  $(x^n \rightarrow x^{n-1})$ 

#### 2. Integration

Power of at least one term increased by 1.  $(x^n \rightarrow x^{n+1})$ 

#### <u>Use of a formula</u>

Where a method involves using a formula that has been learnt, the **advice given in recent examiners' reports is that the formula should** be quoted first.

Normal marking procedure is as follows:

<u>Method mark</u> for quoting a correct formula and attempting to use it, even if there are small errors in the substitution of values.

Where the formula is <u>not</u> quoted, the method mark can be gained by implication from <u>correct</u> working with values, but may be lost if there is any mistake in the working.

#### Exact answers

**Examiners' reports** have emphasised that where, for example, an exact answer is asked for, or working with surds is clearly required, marks will normally be lost if the candidate resorts to using rounded decimals.

# June 2018 WFM01 Further Pure Mathematics F1 Mark Scheme

Question Number		Scheme		Notes	Marks			
1.	$\sum_{r=1}^{n} r(r +$	$3) = \sum_{r=1}^{n} r^2 + 3 \sum_{r=1}^{n} r$	$=\sum_{r=1}^{n}r^{2}+3\sum_{r=1}^{n}r^{2}$					
	$=\frac{1}{6}n(n+$	1)(2 <i>n</i> +1) + 3 $\left(\frac{1}{2}n(n+1)\right)$	Atte	empts to expand $r(r+3)$ and attempts to substitute at least one correct standard formula into their resulting expression.	M1			
				Correct expression (or equivalent)	A1			
	$=\frac{1}{6}n(n+1)$	(2n+1)[(2n+1)+9]	Atte	dependent on the previous M mark empt to factorise at least $n(n+1)$ having attempted to substitute both correct standard formulae.	dM1			
	$=\frac{1}{6}n(n+1)$	+1)(2 <i>n</i> +10)		{this step does not have to be written}				
	$=\frac{n}{3}(n+1)$	+1)(2n+10) 1)(n+5) or $\frac{1}{3}n(n+1)(n+1)$	5)	Correct completion with no errors. <b>Note:</b> $a=3, b=5$	A1

2.	P represents an anti-clockwise rotation	about the origin thro	ough 45 d	degrees		
(a)	$\left\{ \mathbf{P} = \right\} \begin{pmatrix} \frac{\sqrt{2}}{2} & -\frac{\sqrt{2}}{2} \\ \frac{\sqrt{2}}{2} & \frac{\sqrt{2}}{2} \end{pmatrix} \text{ or } \begin{pmatrix} \frac{1}{\sqrt{2}} & -\frac{\sqrt{2}}{2} \\ \frac{1}{\sqrt{2}} & -\frac{\sqrt{2}}{2} \end{pmatrix}$	$\frac{1}{\sqrt{2}} \frac{1}{\sqrt{2}}$ or e.g. $\frac{1}{\sqrt{2}} \begin{pmatrix} 1\\ 1 \end{pmatrix}$	$\begin{pmatrix} 1 & -1 \\ 1 & 1 \end{pmatrix}$	Correct matrix which is expressed in exact surds	B1	
(b)	Enlargement			Enlargement er enlarge	M1	(1)
(b)	Enlargement	About	(0, 0) or	Enlargement or enlarge about <i>O</i> or about the origin	1111	
	Centre (0, 0) with scale factor $k\sqrt{2}$	ar	nd scale o	factor or times <b>and</b> $k\sqrt{2}$	A1	
				llow $\sqrt{2k^2}$ in place of $k\sqrt{2}$		
	Note: Give M0A0	for combinations of				(2)
(c) Way 1	$\left\{ \mathbf{PQ} = \right\} \begin{pmatrix} \frac{\sqrt{2}}{2} & -\frac{\sqrt{2}}{2} \\ \frac{\sqrt{2}}{2} & \frac{\sqrt{2}}{2} \end{pmatrix} \begin{pmatrix} k\sqrt{2} & 0 \\ 0 & k\sqrt{2} \end{pmatrix}$	$=\begin{pmatrix} k & -k \\ k & k \end{pmatrix}$		Multiplies their matrix from t (a) by <b>Q</b> [either way round] and applies " $ad - bc$ " to the resulting matrix		
	$\left\{ \det \mathbf{PQ} = \right\}  (k)(k) - (-k)(k) = 2k^2$	or states their det P		to give $2k^2$ or states  their det <b>PQ</b>   = $2k^2$ ondone {det <b>PQ</b> = } $k^2 + k^2$	A1	
	1	6(their determinant) = 147 or puts their determinant equal to $\frac{147}{6}$				
	$6(2k^2) = 147$ or $2k^2 = \frac{147}{6}$				M1	
	$\left\{ \Rightarrow k^2 = \frac{49}{4} \Rightarrow \right\} k = \frac{7}{2}$			Obtains $k = 3.5$ , o.e.	A1	
			1			(4)
(c) Way 2	det $\mathbf{Q} = \left(k\sqrt{2}\right)\left(k\sqrt{2}\right) - (0)(0)$ or det	$\mathbf{Q} = \left(k\sqrt{2}\right)\left(k\sqrt{2}\right)$		applies " $ad - bc$ " to <b>Q</b> or applies $\left(k\sqrt{2}\right)^2$	M1	
	$\{\det \mathbf{P} = 1 \implies \} \det \mathbf{PQ} = (1)(2k^2) = 2k$ or $\det \mathbf{Q} = 2k^2$	$k^2$		d deduces that det $\mathbf{PQ} = 2k^2$ r states  their det $\mathbf{PQ}$   = $2k^2$ or det $\mathbf{Q} = 2k^2$	A1	
	$6(2k^2) = 147 \text{ or } 2k^2 = \frac{147}{6}$ $6(\text{their det}(\mathbf{PQ})) = 147 \text{ or } (\text{their det}(\mathbf{PQ})) = \frac{147}{6}$ $6(\text{their det}(\mathbf{Q})) = 147 \text{ or } (\text{their det}(\mathbf{PQ})) = \frac{147}{6}$			or $(\text{their det}(\mathbf{PQ})) = \frac{147}{6}$	M1	
	$\left\{ \Rightarrow k^2 = \frac{49}{4} \Rightarrow \right\} k = \frac{7}{2}$	Obtains $k = 3.5$ , o.e.			A1	
						(4)
						7

		Question 2 Notes
<b>2.</b> (b)	Note	"original point" is not acceptable in place of the word "origin".
	Note	"expand" is not acceptable for M1
	Note	"enlarge x by $k\sqrt{2}$ and no change in y" is M0A0
(c)	Note	Obtaining $k = \pm 3.5$ with no evidence of $k = 3.5$ {only} is A0
	Way 2 Note 1	Give M1A1M0A0 for writing down 147(2k <sup>2</sup> ) = 6 or $\frac{1}{2k^2} = \frac{147}{6}$ or $6\left(\frac{1}{2k^2}\right) = 147$ , o.e.
		with no other supporting working.
	Way 2 Note 2	Give M0A0M1A0 for writing det $\mathbf{Q} = \frac{1}{k^2 - (-k^2)}$ or $\frac{1}{2k^2}$ , followed by $6\left(\frac{1}{2k^2}\right) = 147$
	Note	Allow M1A1 for an incorrect rotation matrix <b>P</b> , leading to det $\mathbf{PQ} = 2k^2$
	Note	Allow M1A1M1A1 for an incorrect rotation matrix <b>P</b> , leading to det $\mathbf{PQ} = 2k^2$ and $k = 3.5$ , o.e.
	Note	Using the scale factor of enlargement to write down $k\sqrt{2} = \sqrt{\frac{147}{6}} \Rightarrow k = 3.5$ is M1A1dM1A1
	Note	Using the scale factor of enlargement to write down $k\sqrt{2} = \sqrt{\frac{6}{147}}$ is M1A1dM0

9.		(a) $\frac{z-ki}{z+3i} = i$ (b)(i) $k = 4$ (ii) $k = 1$				
(a) Way 3	$\frac{z-ki}{i}$	$z = z + 3i \implies \frac{iz + k}{(-1)} = z + 3i$	Complete method of making $z$ the subject	M1		
	~	$k = z + 3i \implies -k - 3i = z + iz$ 3i = z(1 + i) $-\frac{k - 3i}{(1 + i)}$	Correct expression for $z =$	A1		
	$z = \frac{(-k)}{(1-k)}$	$\frac{(1-i)}{(1-i)}$	dependent on the previous M mark Multiplies numerator and denominator by the conjugate of the denominator	dM1		
	$z = -\frac{(k+1)}{2}$	$\frac{(k-3)}{2} + \frac{(k-3)}{2}i$ *	Achieves the correct answer with no errors seen	A1* <b>cso</b>		
				(4)		
		Q	uestion 9 Notes			
<b>9.</b> (a)	Note	Condone any of e.g. $z = -\frac{k+3}{2} + \frac{k-3}{2}i$ or $z = -\frac{(3+k)}{2} + \frac{(-3+k)}{2}i$ for the final A mark				
(b)(i)	Note	M1 can be implied by awrt 3.54 or truncated 3.53				
	Note	Give A0 for 3.5355 without reference to $\sqrt{\frac{50}{4}}$ , $\sqrt{12.5}$ , $\frac{\sqrt{50}}{2}$ , $\frac{5}{2}\sqrt{2}$ or $\frac{5}{\sqrt{2}}$ or $\sqrt{\frac{25}{2}}$				
(b)(ii)	Note	Allow M1 (implied) for awrt -2.7, truncated -2.6, awrt -153° or awrt 207° or awrt 3.6				

Question Number	Scheme			Notes	Mark	S
10.	$H: xy = 144; P\left(12p, \frac{12}{p}\right), p \neq 0$ , lies on $H$ . Normal to $H$ at $P$ crosses positive x-axis at $Q$ and negative y-axis at $R$					
		-	as at $Q$ and $z$	• •		
(a)				$\frac{\mathrm{d}y}{\mathrm{d}x} = \pm k  x^{-2}  ;  k \neq 0$	-	
	$xy = 144 \implies x\frac{\mathrm{d}y}{\mathrm{d}x} + y = 0$			es product rule to give $\pm x \frac{dy}{dx} \pm y$	M1	
	$x = 12t$ , $y = \frac{12}{t} \implies \frac{dy}{dx} = \frac{dy}{dt} \cdot \frac{dt}{dx} = -$	$\left(\frac{12}{t^2}\right)\left(\frac{1}{12}\right)$	thei	$\operatorname{tr} \frac{\mathrm{d}y}{\mathrm{d}t} \times \frac{1}{\operatorname{their} \frac{\mathrm{d}y}{\mathrm{d}t}}; \text{ Condone } t \equiv p$		
	So at <i>P</i> , $m_T = -\frac{1}{p^2}$		Correct calc	ulus work leading to $m_T = -\frac{1}{p^2}$	A1	
	So, $m_N = p^2$	Applies	$m_N = \frac{-1}{m_T}, $	where $m_T$ is found using calculus	M1	
	• $y - \frac{12}{p} = "p^2"(x - 12p)$ or • $\frac{12}{p} = "p^2"(12p) + c \implies y = "p^2$		Correct straight line method for an equation of a normal where $m_N (\neq m_T)$ is found by using calculus.			
	Correct algebra leading to $y = p^2 x + \frac{1}{2}$		Correct solution only	A1 *		
	<b>Note:</b> $m_N$ must be a function	nction of $p$ for	or the 2 <sup>nd</sup> M1	and 3 <sup>rd</sup> M1 mark		(5)
(b)	$y = 0 \implies x_Q = 12p - \frac{12}{p^3}$		Puts $y = 0$ and finds x or puts $x = 0$ and finds y	M1		
	$x = 0 \Longrightarrow y_R = \frac{12}{p} - 12p^3$	At least one of $x_Q$ or $y_R$ correct, o.e.		A1		
	$\left(12p - \frac{12}{p^3}, 0\right)$ and $\left(0, \frac{12}{p} - 12p^3\right)$		Both sets of coordinates correct. {Ignore labelling of coordinates}	A1		
			1			(3)
(c)	Area $OQR = \frac{1}{2} \left( 12p - \frac{12}{p^3} \right) \left( \frac{12}{p} - 12p^3 \right)$	$\frac{1}{2} \times$	$(\pm \text{ their } x_{\mathcal{Q}})(\pm \text{ their } y_{\mathcal{R}}) = 512$	M1		
				Correct equation which can be un-simplified or simplified	A1	
	$144p^4 - 1312 + \frac{144}{p^4} = 0$					
	$144p^8 - 1312p^4 + 144 = 0$	Correct 3 term quadratic in $p^4$				
	$\left\{ \Rightarrow 9p^8 - 82p^4 + 9 = 0 \right\}$	<b>Note:</b> 144 <i>p</i>	$b^8 + 144 = 13$	$12p^4$ is acceptable for this mark	A1	
	$(9p^4 - 1)(p^4 - 9) = 0 \implies p^4 =$	$\frac{dependent \text{ on the previous M mark}}{(p^4 - 9) = 0 \implies p^4 =}$ $Uses a 3TQ \text{ in } p^4 \text{ (or an implied 3TQ in } p^4)$ to find at least one value of $p^4 =$			dM1	
	$p = \sqrt{3}$ and $p = -\frac{1}{\sqrt{3}}$			both $p = \sqrt{3}$ and $p = -\frac{1}{\sqrt{3}}$ only <b>w</b> $p = -\frac{\sqrt{3}}{3}$ in place of $p = -\frac{1}{\sqrt{3}}$	A1
