

# Mark Scheme (Results)

Summer 2017

Pearson Edexcel International A Level in Further Pure Mathematics F2 (WFM02/01)

#### Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <a href="https://www.edexcel.com">www.edexcel.com</a> or <a href="https://www.edexcel.com">www.edexcel.com</a>, you can get in touch with us using the details on our contact us page at <a href="https://www.edexcel.com/contactus">www.edexcel.com/contactus</a>.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <a href="https://www.pearson.com/uk">www.pearson.com/uk</a>

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

#### **EDEXCEL GCE MATHEMATICS**

### General Instructions for Marking

- 1. The total number of marks for the paper is 75.
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
- M marks: method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- B marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.
- 3 Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol √ will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- dep dependent
- indep independent
- dp decimal places
- sf significant figures
- \* The answer is printed on the paper
- The second mark is dependent on gaining the first mark
- 4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.
- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
- 6. If a candidate makes more than one attempt at any question:
  - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
  - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer.

# General Principles for Further Pure Mathematics Marking

(But note that specific mark schemes may sometimes override these general principles).

## Method mark for solving 3 term quadratic:

#### 1. Factorisation

$$(x^2+bx+c)=(x+p)(x+q)$$
, where  $|pq|=|c|$ , leading to  $x=...$ 

$$(ax^2 + bx + c) = (mx + p)(nx + q)$$
, where  $|pq| = |c|$  and  $|mn| = |a|$ , leading to  $x = ...$ 

#### 2. Formula

Attempt to use the correct formula (with values for a, b and c).

# 3. Completing the square

Solving 
$$x^2 + bx + c = 0$$
:  $\left(x \pm \frac{b}{2}\right)^2 \pm q \pm c = 0$ ,  $q \neq 0$ , leading to  $x = \dots$ 

# Method marks for differentiation and integration:

#### 1. Differentiation

Power of at least one term decreased by 1.  $(x^n \rightarrow x^{n-1})$ 

#### 2. Integration

Power of at least one term increased by 1.  $(x^n \rightarrow x^{n+1})$ 

#### Use of a formula

Where a method involves using a formula that has been learnt, the advice given in recent examiners' reports is that the formula should be quoted first.

Normal marking procedure is as follows:

<u>Method mark</u> for quoting a correct formula and attempting to use it, even if there are small errors in the substitution of values.

Where the formula is <u>not</u> quoted, the method mark can be gained by implication from <u>correct</u> working with values, but may be lost if there is any mistake in the working.

#### Exact answers

Examiners' reports have emphasised that where, for example, an exact answer is asked for, or working with surds is clearly required, marks will normally be lost if the candidate resorts to using rounded decimals.

## Answers without working

The rubric says that these may not gain full credit. Individual mark schemes will give details of what happens in particular cases. General policy is that if it could be done "in your head", detailed working would not be required.

Question Number	Scheme	Notes	Marks
1	$2(\cos 0 + i\sin 0)$ or 2	$(z =) 2 \text{ or } (z =) 2(\cos 0 + i\sin 0)$ or $2\cos 0 + i\sin 0 \text{ or } 2 + 0i$ Allow $2(\cos 0\pi + i\sin 0\pi)$	B1
	$2\left(\cos\frac{2\pi}{5} + i\sin\frac{2\pi}{5}\right)$	This answer in this form.  Do not allow e.g. $2e^{\frac{2\pi}{5}i}$ but allow $2\cos{\frac{2\pi}{5}} + 2i\sin{\frac{2\pi}{5}}$	B1
	$2\left(\cos\frac{2k\pi}{5} + i\sin\frac{2k\pi}{5}\right), (k=2,3,4)$	Attempts at least 2 more solutions whose arguments differ by $\frac{2\pi}{5}$ . Allow this mark if the arguments are out of range. May be implied by their answers.	M1
		olution form can score full marks if	
		s below can be implied.	
	E.g. $z = 2\left(\cos\frac{2\kappa\pi}{5} + i\sin\frac{2\kappa\pi}{5}\right)$ ,	(k = 0, 1, 2, 3, 4) scores full marks	
	$2\left(\cos\frac{4\pi}{5} + i\sin\frac{4\pi}{5}\right)$	A1: One further correct answer, allow the brackets to be expanded.	
	$2\left(\cos\frac{6\pi}{5} + i\sin\frac{6\pi}{5}\right)$ $2\left(\cos\frac{8\pi}{5} + i\sin\frac{8\pi}{5}\right)$	A1: All correct, allow the brackets to be expanded.	A1 A1
Do n	ot allow $2\left(\cos\frac{4\pi}{5} - i\sin\frac{4\pi}{5}\right)$ or $2\left(\cos\left(\frac{4\pi}{5}\right)\right)$	$\left(-\frac{4\pi}{5}\right) + i\sin\left(-\frac{4\pi}{5}\right)$ for $2\left(\cos\frac{6\pi}{5} + i\sin\frac{6\pi}{5}\right)$	$\left(\frac{6\pi}{5}\right)$
Do not allow $2\left(\cos\frac{2\pi}{5} - i\sin\frac{2\pi}{5}\right)$ or $2\left(\cos\left(-\frac{2\pi}{5}\right) + i\sin\left(-\frac{2\pi}{5}\right)\right)$ for $2\left(\cos\frac{8\pi}{5} + i\sin\frac{8\pi}{5}\right)$			$\left(\frac{8\pi}{5}\right)$
Ignore answers outside the range.  For a fully correct solution that has extra solutions in range, deduct the final A mark			ζ.
Answers in <b>degrees</b> : Penalise once the first time it occurs.			
	Answers in degrees ar	e: 0, 72, 144, 216, 288	(F)

Way 2	$x^{3}(x+3)-4x^{2}(x+3)-5x(x+3) \le 0$ $x = 0, -3$ $x(x+3)(x-5)(x+1) = 0 \Rightarrow x =$ $x = -1, 5$ $-3 < x \le -1, \ 0 < x \le 5$ or e.g.	May multiply by more terms but must be a positive multiplier containing $x^2(x+3)^2$ M1: Collects expressions to one side A1: Correct inequality (or equation)  Correct critical values  Attempt to solve their quartic as far as $x =$ to obtain the <b>other</b> 2 critical values. Allow the $x$ and $x + 3$ to be "cancelled" to obtain the other critical values so may end up solving a cubic or even a quadratic.  Correct critical values  M1: Attempts two inequalities using their 4 critical values in ascending order. E.g. $a * x * b$ , $c * x * d$ where * is "<" or " $\leq$ " and $a < b < c < d$ or equivalent inequalities. Dependent on at	M1A1 B1 M1 A1
Way 2	$x^{3}(x+3)-4x^{2}(x+3)-5x(x+3) \le 0$ $x = 0, -3$ $x(x+3)(x-5)(x+1) = 0 \Rightarrow x =$ $x = -1, 5$ $-3 < x \le -1, \ 0 < x \le 5$ or e.g.	May multiply by more terms but must be a positive multiplier containing $x^2(x+3)^2$ M1: Collects expressions to one side A1: Correct inequality (or equation)  Correct critical values  Attempt to solve their quartic as far as $x =$ to obtain the <b>other</b> 2 critical values. Allow the $x$ and $x + 3$ to be "cancelled" to obtain the other critical values so may end up solving a cubic or even a quadratic.  Correct critical values  M1: Attempts two inequalities using their 4 critical values in ascending order. E.g. $a * x * b$ , $c * x * d$ where * is "<" or " $\leq$ " and $a < b < c < d$ or equivalent inequalities. Dependent on at least one earlier M mark.	M1A1 B1 M1 A1

	5 -6-5-4-3 2 1 1 2 3 4 5 6	Draws a sketch of graphs $y = \frac{x-4}{x+3} \text{ and } y = \frac{5}{x(x+3)}$	
Way 3	x = 0, -3	Correct critical values (vertical asymptotes)	B1
·	$\frac{x-4}{(x+3)} = \frac{5}{x(x+3)}$	Eliminate y	M1
	x(x-4)=5	M1: Obtains quadratic equation A1: Correct quadratic equation	M1A1
	$x^2 - 4x - 5 = 0 \Rightarrow x = -1,5$	M1: Solves their quadratic equation as far as $x =$ A1: Correct critical values	M1A1
	$-3 < x \le -1, \ 0 < x \le 5$ or e.g. $(-3, -1] \cup (0, 5]$	M1: Attempts two inequalities using their 4 critical values in ascending order. E.g. $a * x * b$ , $c * x * d$ where * is "< " or "\leq" and $a < b < c < d$ or equivalent inequalities. Dependent on at least one earlier M mark.  A1: All 4 cv's in the inequalities correct  A1: Both intervals fully correct	M1A1A1

If the candidate takes the above approach and there is no sketch e.g. just cross multiplies to obtain the critical values -1 and 5 then no marks are available i.e. the cv's 0 and -3 must be stated somewhere to give access to subsequent marks in this case.

	Considers	s Regions:
Way 4	Considers $x < -3 \Rightarrow x(x+3) > 0$ $x(x-4) \le 5 \Rightarrow -1 \le x \le 5$ But $x < -3$ so no solution Considers $-3 < x < 0 \Rightarrow x(x+3) < 0$ $x(x-4) \ge 5 \Rightarrow x \ge 5$ or $x \le -1$ But $-3 < x < 0$ so $-3 < x \le -1$ Considers $x > 0 \Rightarrow x(x+3) > 0$ $x(x-4) \le 5 \Rightarrow -1 \le x \le 5$ But $x > 0$ so $0 < x \le 5$	Can be marked as: B1: Critical values 0 and -3 M1: Considers 3 regions M1: Obtains quadratic equation A1: Correct quadratic M1: Solves quadratic A1: cv's -1 and 5 Final 3 marks as already defined.

Question	Scheme	Notes	Marks
Number		1.5.52	
3.(a)	$r^{3} - (r-1)^{3} \equiv r^{3} - (r^{3} - 3r^{2} + 3r - 1)$ or $r^{3} - \left(r^{3} + \binom{3}{1}r^{2}(-1) + \binom{3}{2}r(-1)^{2} + (-1)^{3}\right)$ $\equiv 3r^{2} - 3r + 1 *$ or $r^{3} - (r-1)^{3} \equiv (r^{2} + r(r-1) + (r-1)^{2})$ $\equiv 3r^{2} - 3r + 1 *$	Shows a correct expansion of $(r-1)^3$ or uses $a^3 - b^3 = (a-b)(a^2 + ab + b^2)$ and achieves the printed answer with no errors.	B1*
(b)	$n^{3} - (n-1)^{3}$ $(n-1)^{3} - (n-2)^{3}$ $(n-2)^{3} - (n-3)^{3}$ $3^{3} - 2^{3}$ $2^{3} - 1^{3}$ $1^{3} - 0^{3}$	Uses the method of differences. Must include at least $r = 1, 2,, n$ or $r = 1,, (n-1), n$ . But may implied by sight of $\sum r^3 - (r-1)^3 = n^3$ if insufficient terms shown. If method is clearly other than differences (see note below), then score M0. The final A mark can be witheld if differences not shown i.e. just writes down $n^3$ .	—M1
	$n^{3} = \sum_{r=1}^{n} (3r^{2} - 3r + 1) = \sum_{r=1}^{n} (3r^{2} - 3r + 1)$ Sets $n^{3} = \sum_{r=1}^{n} (3r^{2} - 3r + 1)$ an	-1	M1
	$\sum_{r=1}^{n} 1 = n$	$\sum_{r=1}^{n} 1 = n \text{ seen or implied}$	B1
	$3\sum_{r=1}^{n} r^2 = n(n-1)(n+1) + \frac{3}{2}n(n+1)$	Rearranges to make $k \sum_{r=1}^{n} r^2$ the subject and substitutes for $\sum_{r=1}^{n} r$ .  Dependent on the first method mark.	dM1
	$\sum_{r=1}^{n} r^2 = \frac{1}{6} n(n+1)(2n+1) **$	Completely correct solution with no errors seen.	A1*
	Allow e.g. $\frac{2n^3 + 3n^2 + n}{6}$	$= \frac{1}{6}n(n+1)(2n+1)$	
	Note: May be s	een in (h):	(5)
	Scores a maximum M0M1B1dM	$n^2 - \frac{1}{4}n^2(n-1)^2 = n^3$ etc.	
	Generally, there are no mark	ks for proof by induction
