

Mark Scheme (Results)

Summer 2023

Pearson Edexcel International Advanced Level In Mechanics M1 (WME01) Paper 01 Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

Pearson: helping people progress, everywhere

Edexcel and BTEC Qualifications

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

Summer 2023 Question Paper Log Number 72902 Publications Code WME01_01_2306_MS All the material in this publication is copyright © Pearson Education Ltd 2023

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

General Instructions for Marking

The total number of marks for the paper is 75.

Edexcel Mathematics mark schemes use the following types of marks:

`M' marks

These are marks given for a correct method or an attempt at a correct method. In Mechanics they are usually awarded for the application of some mechanical principle to produce an equation, e.g. resolving in a particular direction; taking moments about a point; applying a suvat equation; applying the conservation of momentum principle; etc.

The following criteria are usually applied to the equation.

To earn the M mark, the equation

- (i) should have the correct number of terms
- (ii) each term needs to be dimensionally correct

For example, in a moments equation, every term must be a **'force x distance'** term or **`mass x distance'**, if we allow them to cancel 'g' s.

For a resolution, all terms that need to be resolved (multiplied by sin or cos) must be resolved to earn the M mark.

'M' marks are sometimes dependent (DM) on previous M marks having been earned, e.g. when two simultaneous equations have been set up by, for example, resolving in two directions and there is then an M mark for solving the equations to find a particular quantity – this M mark is often dependent on the two previous M marks having been earned.

`A' marks

These are dependent accuracy (or sometimes answer) marks and can only be awarded if the previous M mark has been earned. e.g. MO A1 is impossible.

'B' marks

These are independent accuracy marks where there is no method (e.g. often given for a comment or for a graph).

A and B marks may be f.t. – follow through – marks.

General Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes:

- bod means benefit of doubt
- ft means follow through
 - the symbol $\sqrt{}$ will be used for correct ft
- cao means correct answer only
- cso means correct solution only, i.e. there must be no errors in this part of the question to obtain this mark
- isw means ignore subsequent working

- awrt means answers which round to
- SC means special case
- oe means or equivalent (and appropriate)
- dep means dependent
- indep means independent
- dp means decimal places
- sf means significant figures
- * means the answer is printed on the question paper
- means the answer is printed on the question paper
 means the second mark is dependent on gaining the first mark

All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.

For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.

If a candidate makes more than one attempt at any question:

- If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
- If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.

Ignore wrong working or incorrect statements following a correct answer.

General Principles for Mechanics Marking

(NB specific mark schemes may sometimes override these general principles)

- Rules for M marks:
 - o correct no. of terms;
 - o dimensionally correct;
 - all terms that need resolving (i.e. multiplied by cos or sin) are resolved.
- Omission or extra g in a resolution is an accuracy error not method error.
- Omission of mass from a resolution is a method error.
- Omission of a length from a moments equation is a method error.
- Omission of units or incorrect units is not (usually) counted as an accuracy error.
- DM indicates a dependent method mark, i.e. one that can only be awarded if a previous specified method mark has been awarded.
- Any numerical answer which comes from use of g = 9.8 should be given to 2 or 3 SF.
- Use of g = 9.81 should be penalised once per (complete) question.
 - N.B. Over-accuracy or under-accuracy of correct answers should only be penalised *once* per complete question. However, premature approximation should be penalised every time it occurs.
- Marks must be entered in the same order as they appear on the mark scheme.
- In all cases, if the candidate clearly labels their working under a particular part of a question i.e. (a) or (b) or (c)...then that working can only score marks for that part of the question.
- Accept column vectors in all cases.
- Misreads if a misread does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, bearing in mind that after a misread, the subsequent A marks affected are treated as A ft

Mechanics Abbreviations

- M(A) Taking moments about A.
- N2L Newton's Second Law (Equation of Motion)
- NEL Newton's Experimental Law (Newton's Law of Impact)
- HL Hooke's Law
- SHM Simple harmonic motion
- PCLM Principle of conservation of linear momentum
- RHS Right hand side
- LHS Left hand side

Question		
Number	Scheme	Marks
1(a)	2u $3u$	
	$A (4 \text{ kg}) \qquad B (2 \text{ kg})$	
	$\rightarrow v$ $2u$	
	v $2u$	
	CLM: $(4 \times 2u) + (-3u \times 2) = 4v + (2 \times 2u)$	
	OR	M1 A1
	Equating impulses: $2(2u - 3u) = 4(-v - 2u)$	
	$\frac{1}{2}u(\mathrm{m \ s}^{-1})$	A1
		(2)
1(b)	The direction of motion is reversed.	(3) B1
1(0)		(1)
	For <i>B</i> : $I = \pm 2(2u3u)$	(-)
1(c)		M1
	OR For A: $I = \pm 4\left(\frac{u}{2}2u\right)$	A1
	$I = 10u \text{ Ns} \text{ or } 10u \text{ kgm s}^{-1}$	A1
		(3)
		(7)
	Notes	1
(a)		
M1	Dimensionally correct CLM equation or equating of impulses equation.	
A1	Allow consistent extra g's. Ignore sign errors. May be $+v$ or $-v$ Correct unsimplified equation	
Al	Cao. Must be positive.	
(b)		
B1	Accept <i>opposite direction</i> . Do not accept <i>changed</i> or <i>to the left or backwards</i> , away from <i>B</i>	
	N.B. This mark is dependent on correctly obtaining $\frac{1}{2}u$ or $-\frac{1}{2}u$ in (a)	
(c)		
M1	Dimensionally correct impulse-momentum equation using A or B.	
<u> </u>	Condone sign errors with appropriate velocities. M0 if g is included	
A1 A1	Correct unsimplified equation	
AI	Cao with units. Accept kg m/s	

Question Number	Scheme	Marks
2(a)	$\mathbf{F}_{3} + (3c\mathbf{i} + 4c\mathbf{j}) + (-14\mathbf{i} + 7\mathbf{j}) = 0$ oe	M1
	$\mathbf{F}_3 = (14 - 3c)\mathbf{i} + (-7 - 4c)\mathbf{j}$	Al
		(2)
2(b)	Resultant force $\mathbf{F}_{1} + \mathbf{F}_{2} = (6 - 14)\mathbf{i} + (8 + 7)\mathbf{j}$	M1
	(=-8i+15j)	
	¹⁵ ⁸ Find any relevant angle for their (even if they've subtracted) resultant (need not be acute nor positive)	M1
	any of $\tan^{-1}\left(\pm\frac{8}{15}\right)$, $\tan^{-1}\left(\pm\frac{15}{8}\right)$, $\sin^{-1}\left(\pm\frac{8}{17}\right)$, $\cos^{-1}\left(\pm\frac{8}{17}\right)$,	Alft
	120° or better (118.0724)OR240° or better (241.9276)In radians 2.1 or better (2.0607)OR4.2 or better (4.2224)	A1
		(4)
2(c)	Use of Pythagoras on their resultant : $\sqrt{(-8)^2 + 15^2}$	M1
	or their acceleration: $\sqrt{\left(\frac{-8}{m}\right)^2 + \left(\frac{15}{m}\right)^2}$	M1
	Use of their $\mathbf{R} = 8.5m$ or their Resultant = $m\mathbf{a}$	M1
·	A correct equation in <i>m</i> only eg $17 = m \times 8.5$	Alft
	<i>m</i> = 2	A1
	N. B. $ \sqrt{\left(\frac{-8}{8.5}\right)^2 + \left(\frac{15}{8.5}\right)^2} \qquad M1 $ $ -8i + 15j = 8.5m \qquad M1 $ $ \sqrt{\left(\frac{-8}{8.5}\right)^2 + \left(\frac{15}{8.5}\right)^2} = m \qquad A1ft $ $ 2 = m \qquad A1 $	
	2 = m A1	(4)
		(4) (10)

	Notes	
	Accept column vectors throughout apart from answer for (a)	
(a)		
M1	Uses the vector sum of all 3 forces being equal to zero oe	
	N.B. $F_3 = F_1 + F_2$ is M0	
A1	cao Must be in terms of c, i and j but allow uncollected i's and j's and apply isw if	
	necessary.	
(b)		
M1	Finds the resultant using $\mathbf{F}_1 + \mathbf{F}_2$ or $-$ their \mathbf{F}_3	
M1	Uses trig to find a relevant angle for their resultant	
A1ft	Any correct relevant angle (does not need to be acute), ft on their resultant	
A1	Cso.	
(c)		
M1	Use of Pythagoras to find the magnitude of their resultant force or their acceleration	
M1	Allow their $\mathbf{R} = 8.5 \ m$	
A1ft	A correct scalar equation in <i>m</i> only eg $17 = m \times 8.5$, ft on their resultant	
A1	cso	

Question Number	Scheme	Marks
- / .	$1.5 = 0 + \frac{1}{2}gt^2$	M1
3(a)	$1.5 - 0 + 2^{gr}$	A1
	t = 0.55 or $0.553(s)$	A1
		(3)
	$15 0 \frac{1}{2} (0.6)^2$	M1
3(b)	$1.5 = 0 + \frac{1}{2}a (0.6)^2$	A1
	0.2g - R = 0.2a	M1
		A1
	R = 0.293, 0.29	A1
		(5)
		(8)
	Notes for Question 3	
(a)		
M1	Complete method to find the time taken using $a = g$	
A1	Correct unsimplified equation in <i>t</i> only	
A1	Cao	
(b)		
M1	Complete method to form an equation in <i>a</i> only, $a \neq g$, using $t = 0.6$	
A1	Correct unsimplified equation in <i>a</i> only	
M1	Use $F = ma$ to form an equation of motion with correct terms, conde	one sign
	errors, $a \neq g$	
A1	Correct unsimplified equation	
A1	Cao	
	N.B. Allow consistent use of (- <i>a</i>) instead of <i>a</i> and penalise in the sec	ond
	equation if inconsistent.	
	N.B. Penalise use of $g = 9.81$ once for the whole question.	
	Also penalise once for the whole question, answers as fractions, pena	lise the
	first one, if both answers are fractions.	

Question Number	Scheme	Marks
1 (uniber	T and 4T correctly placed	B1
4(a)	Vertical resolution	M1 A1
	T + 4T = pmg + mg	
	OR a moments equation, see below.	
	$M(A): (4T \times 0.6) + (T \times 1.8) = (mg \times 1)$	M1 A1
	$\begin{array}{c} 4T \\ \hline \\ mg \\ pmg \\ pmg \\ pmg \\ 2m \\ \hline \\ 0.8 \\ D \\ 0.2 \\ B \\ 0.2 \\ 0.$	
	$M(G): (pmg \times 1) + (T \times 0.8) = (4T \times 0.4)$ $M(D): (pmg \times 1.8) + (mg \times 0.8) = (4T \times 1.2)$	
	$M(B): (4T \times 1.4) + (T \times 0.2) = (pmg \times 2) + (mg \times 1)$	
	Eliminate T	
	$5\left(\frac{5mg}{21}\right) = pmg + mg$	M1
	$p = \frac{4}{21}$ (exact ratio of 2 positive integers)	A1 (7)
	Transien et Die zone en implied	(7)
4(b)	Tension at D is zero, seen or implied.	B1 M1 A1
4(D)	$\mathbf{M}(C): (qmg \times 0.6) = (mg \times 0.4)$	MI AI
	$q = \frac{2}{3}$ (exact ratio of 2 positive integers), accept 0.666 or 0.6	A1
		(4)
4(c)	The centre of mass (or gravity) of the beam is in the middle; the mass (weight) of the beam acts at the middle, mass at centre, centre of mass at the centre. Penalise incorrect extras.	B1
		(1)
		(12)
	Notes for Question 4	
(a)	N.B. Full marks can be scored if <u>consistent</u> omission of g 's in a complete s but otherwise penalise omission of g 's	
B 1	Correct relationship between the tensions and placed correctly, seen or imp	olied.
M1	Vertical resolution. Condone forces at C and D the wrong way round or wreak T_C and T_D .	
	This equation may be replaced with a moments equation.	

A1Correct unsimplified equation (even if <i>T</i> and <i>4</i> , <i>a</i> is the wong way round on their diagram)M1Moments equation. Correct forces multiplied by a length. Condone consistent forces at <i>C</i> and <i>D</i> the wrong way round or written as T_c and T_D A1Correct unsimplified equation in <i>p</i> only allow extra <i>m</i> 's or <i>g</i> 's or bothA1Cao. Must be exact.N.B. If they write down more than two equations, award the marks for those equations which they use to solve the problem.(b)B1Recognise tension at <i>D</i> is 0, seen or impliedM1Correct unsimplified equation in <i>q</i> only. e.g. Moments about <i>C</i> equation.A1Cao. Must be exact.A1Correct unsimplified equation in <i>q</i> only. e.g. Moments about <i>C</i> equation.A1Correct unsimplified equation in <i>q</i> only. e.g. Moments about <i>C</i> equation.A1Correct unsimplified equation in <i>q</i> only. e.g. Moments about <i>C</i> equation.A1Cao. PMT

	Notes for Question 5
(a)	
M1	Uses total area under graph to find an expression for the distance in terms of V and T only May use: Trapezium: $\left(\frac{T+T-30}{2}\right)V$
	triangle + rectangle : $\frac{1}{2}(30V) + V(T-30)$ a triangle subtracted from a rectangle: $VT - \frac{1}{2}(30 \times V)$ OR use of <i>suvat</i> : $\frac{1}{2}(30V) + V(T-30)$
A1*	Given answer correctly obtained (allow omission of 'metres'.
(b)	
	N.B. If graph is not done on either of the given graphs on the question paper, they score B0B0.
B 1	Correct shape with acceleration lines parallel and meeting at (T, V) B0 if continuous vertical line at $t = T$
B 1	Correct horizontal labels. Accept appropriately labelled delineators. N.B. This mark is independent of the first B1.
(c)	
M1	Correct method using gradients or <i>suvat</i> to obtain an equation in V only
A1*	Given answer correctly obtained
(d)	
M1	For motorbike: find an expression for the TOTAL area under the graph (or use <i>suvat</i>) to find the total distance travelled in terms of V and T only. N.B. $\frac{1}{2}\left(\frac{4V}{3} \times 40\right) + \left(\frac{4V}{3} \times 10\right) + \frac{1}{2}\left(\frac{4V}{3} - V\right)(T - 60)$ is M0 as it omits a part of the area.
A1	Correct unsimplified expression with at most one error/slip
A1	Correct unsimplified expression
M1	Clear attempt to equate their distance to the given distance in part (a) to give an equation in T only i.e. the V 's must cancel but they do not need to be cancelled for this mark. N.B. This is an independent mark.
