

Mark Scheme (Final)

January 2020

Pearson Edexcel International Advanced Level in
Mechanics M2 (WME02/01)

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

PEARSON EDEXCEL IAL MATHEMATICS

General Instructions for Marking

1. The total number of marks for the paper is 75.
2. The Edexcel Mathematics mark schemes use the following types of marks:

'M' marks

These are marks given for a correct method or an attempt at a correct method. In Mechanics they are usually awarded for the application of some mechanical principle to produce an equation.

e.g. resolving in a particular direction, taking moments about a point, applying a suvat equation, applying the conservation of momentum principle etc.

The following criteria are usually applied to the equation.

To earn the M mark, the equation

(i) should have the correct number of terms

(ii) be dimensionally correct i.e. all the terms need to be dimensionally correct

e.g. in a moments equation, every term must be a 'force x distance' term or 'mass x distance', if we allow them to cancel 'g' s.

For a resolution, all terms that need to be resolved (multiplied by sin or cos) must be resolved to earn the M mark.

M marks are sometimes dependent (DM) on previous M marks having been earned.

e.g. when two simultaneous equations have been set up by, for example, resolving in two directions and there is then an M mark for solving the equations to find a particular quantity – this M mark is often dependent on the two previous M marks having been earned.

'A' marks

These are dependent accuracy (or sometimes answer) marks and can only be awarded if the previous M mark has been earned. E.g. M0 A1 is impossible.

'B' marks

These are independent accuracy marks where there is no method (e.g. often given for a comment or for a graph)

A few of the A and B marks may be f.t. – follow through – marks.

3. General Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod – benefit of doubt
 - ft – follow through
 - the symbol \checkmark will be used for correct ft
 - cao – correct answer only
 - cso - correct solution only. There must be no errors in this part of the question to obtain this mark
 - isw – ignore subsequent working
 - awrt – answers which round to
 - SC: special case
 - oe – or equivalent (and appropriate)
 - dep – dependent
 - indep – independent
 - dp decimal places
 - sf significant figures
 - * The answer is printed on the paper
 - \square The second mark is dependent on gaining the first mark
4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.
 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
 6. If a candidate makes more than one attempt at any question:
 - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
 - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
 7. Ignore wrong working or incorrect statements following a correct answer.

General Principles for Mechanics Marking

(But note that specific mark schemes may sometimes override these general principles)

- Rules for M marks: correct no. of terms; dimensionally correct; all terms that need resolving (i.e. multiplied by cos or sin) are resolved.
- Omission or extra g in a resolution is an accuracy error not method error.
- Omission of mass from a resolution is a method error.
- Omission of a length from a moments equation is a method error.
- Omission of units or incorrect units is not (usually) counted as an accuracy error.
- DM indicates a dependent method mark i.e. one that can only be awarded if a previous specified method mark has been awarded.
- Any numerical answer which comes from use of $g = 9.8$ should be given to 2 or 3 SF.
- Use of $g = 9.81$ should be penalised once per (complete) question.

N.B. Over-accuracy or under-accuracy of correct answers should only be penalised *once* per complete question. However, premature approximation should be penalised every time it occurs.

Marks must be entered in the same order as they appear on the mark scheme.

- In all cases, if the candidate clearly labels their working under a particular part of a question i.e. (a) or (b) or (c),.....then that working can only score marks for that part of the question.
- Accept column vectors in all cases.
- Misreads – if a misread does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, bearing in mind that after a misread, the subsequent A marks affected are treated as A ft
- Mechanics Abbreviations

M(A) Taking moments about A.

N2L Newton's Second Law (Equation of Motion)

NEL Newton's Experimental Law (Newton's Law of Impact)

HL Hooke's Law

SHM Simple harmonic motion

PCLM Principle of conservation of linear momentum

RHS, LHS Right hand side, left hand side.

Question Number	Scheme	Marks
1.	Use of $56 = FV$ Equation of motion $F + 75g \sin \alpha - 40 = 75 \times \frac{1}{3}$ $\left(\frac{56}{V} = 65 - 49 = 16 \right)$ $V = \frac{56}{16} = 3.5$ <p style="text-align: center;">Notes</p>	B1 M1 A1 A1 A1 <p style="text-align: right;">[5]</p>
B1 M1 A1 A1 A1	Require all terms. Dimensionally correct. (Omission of g is an accuracy error.) Condone sine / cosine confusion and sign errors Unsimplified equation with at most one error. In F or in V . Two signs inconsistent is 2 errors. Correct unsimplified equation. In F or in V . Max 3 s.f.. Not $\frac{7}{2}$ Not $3\frac{1}{2}$	

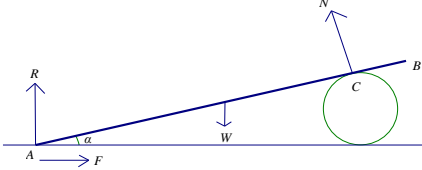

Question Number	Scheme	Marks
2	Work energy equation KE lost = WD + PE gain $\frac{1}{2} \times 2 \times 16 = WD + 2g \times 2.5 \sin \theta$ (WD = 9) Use of $F = \mu \times 2g \cos \theta$ Use of Work done = $2.5F$ $9 = 2.5 \times \mu \times 2g \cos \theta \Rightarrow \mu = 0.19$	M1 A1 A1 B1 B1 A1 (6) [6]
M1 A1 A1 B1 B1 A1	Must be using work-energy. Require all terms. Dimensionally correct. Allow their WD, but must be WD, not F Condone sine/cosine confusion and sign errors Unsimplified equation with at most one error Correct unsimplified equation NB: $16 = WD + 7$ seen scores 3 marks ($F = \mu \times 19.398\dots$) Allow \pm This mark is available if they use a <i>suvat</i> approach Allow \pm Or 0.186. Max 3 sf. Not $\frac{3\sqrt{3}}{28}$	

Question Number	Scheme	Marks
3	<p>Use of $m\mathbf{v} = \mathbf{I} + m\mathbf{u}$</p> <p>Component of momentum parallel to original direction = $6 \times 0.75 + \sqrt{24} \cos 60$ ($= 4.5 + \sqrt{6}$)</p> <p>Use of Pythagoras: $(\frac{3}{4}v =) \sqrt{(4.5 + \sqrt{6})^2 + 18}$</p> <p>$v = 10.9$ (m s^{-1}), 11 (m s^{-1})</p> <p>Alternative for the 1st 5 marks:</p> <p>Vector triangle for impulses or velocities</p> <p>Use of cosine rule</p> $\left(\frac{3}{4}v\right)^2 = 4.5^2 + 24 - 2 \times 4.5 \times \sqrt{24} \times \cos 120^\circ$ <p>$v = 10.9$ (m s^{-1}), 11 (m s^{-1})</p> <p>Change in direction = $\tan^{-1} \frac{3\sqrt{2}}{4.5 + \sqrt{6}}$</p> <p>= 31.4° (31°)</p> <p style="text-align: center;">Notes</p>	<p>M1</p> <p>A1</p> <p>A1</p> <p>M1</p> <p>A1</p> <p>M1</p> <p>M1</p> <p>A1</p> <p>A1</p> <p>A1</p> <p>M1</p> <p>A1 (7)</p> <p style="text-align: right;">[7]</p>
<p>M1</p> <p>A1</p> <p>M1</p> <p>A1</p> <p>A1</p> <p>M1</p> <p>A1</p> <p>A1</p> <p>M1</p> <p>A1</p>	<p>Need to consider both components.</p> <p>Or equivalent</p> <p>Or equivalent.</p> <p>Correct LHS</p> <p>Or better</p> <p>Must be using correct triangle - need 120° seen or implied</p> <p>Correct unsimplified</p> <p>Or better</p> <p>Or equivalent use of trig. With their components to find the required angle</p> <p>Eg angle = $\cos^{-1} \left(\frac{4.5^2 + (mv)^2 - 24}{2 \times 4.5 \times (mv)} \right)$</p> <p>Or from scalar product,</p> $\cos^{-1} \left(\frac{6 \times 9.27...}{6 \times 10.9...} \right)$ <p>A1</p> <p>0.548 radians (0.55 radians)</p> <p>or better. Do not ISW</p>	

Question Number	Scheme	Marks
<p>4(a)</p> <p>Moments about AC</p> $18 \times \frac{3a}{2} - 2\pi \times \frac{8a}{3\pi} + 2\pi \left(3a + \frac{8a}{3\pi} \right) = 18\bar{y}$ <p>NB: valid to use $18 \times \frac{3a}{2} - 2\pi \times d + 2\pi(3a + d) = 18\bar{y}$ for $d \neq 0$ without stating value for d Use of $d = 0 \Rightarrow$ M0</p> $(27a + 6\pi a = 18\bar{y})$ <p>The same incorrect distance used twice in place of $\frac{8a}{3\pi}$ is one error</p> <p>The same incorrect area for the semicircle used twice is one error.</p> $27a + 6\pi a = 18\bar{y} \Rightarrow \bar{y} = \frac{9 + 2\pi}{6} a \quad *$ <p>4b</p> $M \bar{x} + kM \times 6a = (1+k)M \bar{x}_T$ $3a + 6ak = (1+k) \bar{x}_T \quad \text{o.e.}$ $M \bar{y} = (1+k)M \bar{y}_T$ $(1+k) \bar{y}_T = \frac{9 + 2\pi}{6} a$ <p>NB</p> <p>For their second equation they could use $\tan \phi$ and their \bar{x}_T or \bar{y}_T to form an expression for \bar{y}_T or \bar{x}_T</p> $\tan \phi = \frac{3}{2} = \frac{\bar{x}_T}{\bar{y}_T} \Rightarrow \frac{3}{2} = \frac{6(3a + 6ak)}{(9 + 2\pi)a}$ $\Rightarrow k = \frac{\pi}{12} - \frac{1}{8} \text{ or equivalent}$	<p>M1</p> <p>A1</p> <p>A1</p> <p>A1 (4)</p> <p>M1</p> <p>A1</p> <p>M1</p> <p>A1</p> <p>DM1</p> <p>A1 (6)</p> <p style="text-align: center;">Notes</p>	
<p>M1</p> <p>A1</p> <p>A1</p> <p>A1</p> <p>NB</p> <p>DM1</p> <p>A1</p>	<p>All terms. Dimensionally correct. Condone sign errors</p> <p>Unsimplified equation with at most one error.</p> <p>Correct unsimplified equation</p> <p>Obtain given answer from sufficient correct exact working. Must see a separate conclusion for \bar{y}.</p> <p>e.g. $\bar{y}_T = \frac{2(3 + 6k)a}{3(1+k)}$</p> <p>Form equation in k and solve for k. Dependent on the previous 2 M marks.</p> <p>$k = 0.137$ (0.14) or better See over for alternative solution to 4(b)</p>	

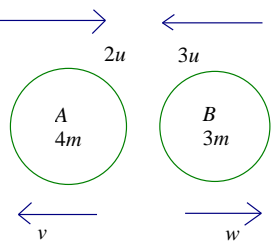

Question Number	Scheme	Marks
4(b) alt	Distance of original c of m from vertical through A $\left(\frac{9+2\pi}{6}a - 2a\right) \times \sin \phi \left(= \frac{\sqrt{13}(2\pi-3)a}{26} \right)$ Distance of additional particle from vertical through A $6a \times \cos \phi \left(= \frac{12a}{\sqrt{13}} \right)$ $mg \times \frac{\sqrt{13}(2\pi-3)a}{26} = kmg \times \frac{12a}{\sqrt{13}}$ $k = 0.137 \quad (0.14)$ <p style="text-align: center;">Notes</p>	M1 A1 M1 A1 DM1 A1 (6) <p style="text-align: right;">[10]</p>
M1 A1 M1 M1 A1 DM1 A1	Or equivalent Distance of additional particle from vertical through A Or equivalent Moments about A Dependent on the 2 previous M marks (0.14 or better)	

Question Number	Scheme	Marks
5a	Use of $\mathbf{a} = \frac{d\mathbf{v}}{dt}$: $\mathbf{a} = 6\mathbf{i} + 2\mathbf{j}$ $t = 0 \Rightarrow \mathbf{a} = 2\mathbf{j}$ (ms^{-2})	M1 A1 (2)
5b	$11(2t - 4) = (3t^2 - 4)$ $3t^2 - 22t + 40 = 0 \Rightarrow \left(t = \frac{10}{3}\right) t = 4$ $\mathbf{v} = 44\mathbf{i} + 4\mathbf{j}$, speed = $\sqrt{44^2 + 4^2}$ $= 4\sqrt{122}$ (m s^{-1})	M1 M1 DM1 A1 (4)
5c	Use of $\mathbf{r} = \int \mathbf{v} dt$ $\mathbf{r} = (t^3 - 4t)\mathbf{i} + (t^2 - 4t)\mathbf{j}$ Set $\mathbf{r} = 0$ and solve for t $t^3 - 4t = 0 \Rightarrow t = 0, 2, (-2)$ $t^2 - 4t = 0 \Rightarrow t = 0, 4$ the only common value is $t = 0$, so does not return to O .*	M1 A1 M1 A1* (4) Notes [10]
5a M1 A1	Powers going down Must see vector answer but ISW if go on to state the magnitude.	
5b M1	Use of velocity parallel to $11\mathbf{i} + \mathbf{j}$ 11 must be on the correct side.	
DM1	Select the larger root (dependent on the previous 2 M1 marks and on 2 positive roots) and use Pythagoras. Condone if they find both speeds	
A1	Any equivalent simplified surd form ($\sqrt{1952}$) ISW	
	44.18... implies M1 if correct surd form not seen.	
	Both values for speed given is A0	
M1	Powers going up	
A1	If a constant of integration is introduced, they must conclude it is equal to the zero vector	
M1	Consider both components	
A1*	Or equivalent clear explanation of given result .	
	Condone if they ignore $t = 0$. Do not need to see the roots. But do need to see the factorised form for each component if using this method.	

Question Number	Scheme	Marks
6a	 <p>Resolve vertically $\uparrow R + N \cos \alpha = W$</p> <p>Take moments about A $7aN = 4a \cos \alpha \times W$</p> <p>Obtain equation in R, W and α</p> $N = W \times \frac{4}{7} \cos \alpha \Rightarrow$ $R = W - \frac{4}{7} W \cos^2 \alpha$ $= W \left(1 - \frac{4}{7} \cos^2 \alpha \right) *$ <p>Alternative equations $R \sin \alpha + F \cos \alpha = W \sin \alpha$ $N + R \cos \alpha = W \cos \alpha + F \sin \alpha$ $W.3a \cos \alpha + F.7a \sin \alpha = R.7a \cos \alpha$</p> <p>First 4 marks for alternative methods</p>	<p>M1 A1 M1 A1 DM1 A1* (6)</p> <p>M1 A1 M1 A1 DM1 A1* (6)</p>
6a M1	<p>A1 Correct unsimplified equation</p> <p>M1 A1 Correct unsimplified equation</p> <p>DM1 Solve for R in terms of W. Dependent on the 2 preceding M marks</p> <p>A1* Obtain given answer from correct working</p> <p>Alt: Parallel to the rod Perpendicular to the rod Moments about C</p> <p>M1 Equation in R. All terms needed. Condone sin/cos confusion and sign errors</p> <p>A1 Correct unsimplified equation</p> <p>M1 Sufficient additional equations to solve for R in terms of W. Dimensionally correct. All terms needed. Condone sin/cos confusion and sign errors</p> <p>A1 Correct unsimplified equation</p>	

Question Number	Scheme	Marks
<p>7a</p> <p>7b</p> <p>7c</p> <p>7c alt</p>	<p>NB: sine/cosine confusion is not condoned in projectile questions</p> <p>Use of conservation of energy</p> $\frac{1}{2}m \times 25^2 = \frac{1}{2}m \times 15^2 + mgh$ <p>$\Rightarrow h = 20$ or 20.4 (m)</p> <p>Vertical distance</p> $20.4 = 25 \sin \alpha \times 3 - 4.5 \times 9.8$ <p>$\alpha = 59^\circ$ or 59.3°</p> <p>Horizontal component of speed is constant</p> $\Rightarrow 25 \cos \alpha = 15 \cos \beta$ <p>$\beta = 32^\circ$ or 31.8°</p> <p>Vertical distance</p> $20.4 = -15 \sin \beta \times 3 + 4.5 \times 9.8$ <p>$\beta = 32^\circ$ or 31.8°</p> <p style="text-align: center;">Notes</p>	<p>M1</p> <p>A1</p> <p>A1 (3)</p> <p>M1</p> <p>A1ft</p> <p>A1 (3)</p> <p>M1</p> <p>A1ft</p> <p>A1 (3)</p> <p>M1</p> <p>A1ft</p> <p>A1 (3)</p>
<p>7a M1</p> <p>A1</p> <p>A1</p> <p>7b M1</p> <p>A1ft</p> <p>A1</p> <p>7c M1</p> <p>A1ft</p> <p>A1</p> <p>7c alt</p> <p>M1</p> <p>A1ft</p> <p>A1</p>	<p>Need energy equation with all 3 terms. Must be dimensionally correct. Condone sign errors.</p> <p>Correct unsimplified equation</p> <p>Max 3 sf Not $\frac{1000}{49}$ nor $\frac{200}{g}$</p> <p>Use of <i>suvat</i> to find α</p> <p>Correct unsimplified equation in their h</p> <p>0.554 rads. Max 3 sf From CWO</p> <p>Or horizontal distance travelled</p> <p>Correct unsimplified in α or their α</p> <p>0.554 rads. Max 3 sf From CWO</p> <p>Use of <i>suvat</i> to find β</p> <p>e.g. using $s = vt - \frac{1}{2}gt^2$. Correct unsimplified equation in their h</p> <p>0.554 rads. Max 3 sf From CWO</p>	

Question Number	Scheme	Marks
7d	Min speed = horizontal component = $25 \cos \alpha (= 15 \cos \beta)$ = 13 or 12.8 (m s ⁻¹)	M1 A1 (2)
7e	By considering vertical component of speed at <i>B</i> : $15 \sin 31.8^\circ - gT = -15 \sin 31.8^\circ$ $T = 1.6$ or 1.61 (s)	M1 A1ft A1 (3)
Notes		[14]
7d M1 A1	Follow their angle. Must show working if using incorrect angle. Max 3 sf From CWO	
7e M1 A1ft A1	Complete method using <i>suvat</i> to find <i>T</i> Correct unsimplified equation in <i>T</i> - follow their angles. Max 3 sf From CWO	

Question Number	Scheme	Marks
8	 <p>Change in KE</p> $\frac{4m}{2}(4u^2 - v^2) + \frac{3m}{2}(9u^2 - w^2) = \frac{473}{24}mu^2$ $(48v^2 + 36w^2 = 43u^2)$ <p>Equation for CLM</p> <p>Need all terms. Dimensionally correct.
