Mathematical Formulae and Statistical Tables (Blue)

Total Marks

--

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Whenever a numerical value of g is required, take $g = 9.8 \text{ m s}^{-2}$, and give your answer to either two significant figures or three significant figures.
- When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information

- The total mark for this paper is 75.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Figure 2

A uniform rod AB , of mass m and length $2a$, is freely hinged to a fixed point A . A particle of mass km is fixed to the rod at B . The rod is held in equilibrium, at an angle θ to the horizontal, by a force of magnitude F acting at the point C on the rod, where $AC = \frac{5}{4}a$, as shown in Figure 2. The line of action of the force at C is at right angles to AB and in the vertical plane containing AB .

Given that $\tan \theta = \frac{3}{4}$

(a) show that $F = \frac{16}{25}mg(1 + 2k)$, (4)

(b) find, in terms of m , g and k ,

(i) the horizontal component of the force exerted by the hinge on the rod at A ,

(ii) the vertical component of the force exerted by the hinge on the rod at A . (5)

Given also that the force acting on the rod at A acts at 45° above the horizontal,

(c) find the value of k . (3)
