## Pearson Edexcel International Advanced Level

Time 1 hour 30 minutes

Paper  
reference

**WME03/01**

### Mathematics

International Advanced Subsidiary/Advanced Level  
Mechanics M3

**You must have:**

Mathematical Formulae and Statistical Tables (Yellow), calculator

Total Marks

**Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.**

### Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Whenever a numerical value of  $g$  is required, take  $g = 9.8 \text{ m s}^{-2}$ , and give your answer to either two significant figures or three significant figures.

### Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 7 questions in this question paper. The total mark for this paper is 75.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- If you change your mind about an answer, cross it out and put your new answer and any working underneath.

6.

Figure 3

A light rod of length  $a$  is free to rotate in a vertical plane about a horizontal axis through one end  $O$ . A particle  $P$  of mass  $m$  is attached to the other end of the rod. The particle  $P$  is held at rest with the rod making an angle  $\alpha$  with the upward vertical through  $O$ ,

where  $\tan \alpha = \frac{3}{4}$

The particle  $P$  is then projected with speed  $u$  in a direction which is perpendicular to the rod. At the instant when the rod makes an angle  $\theta$  with the upward vertical through  $O$ , the speed of  $P$  is  $v$ , as shown in Figure 3.

Air resistance is assumed to be negligible.

(a) Show that  $v^2 = u^2 + \frac{2ag}{5}(4 - 5\cos\theta)$  (4)

It is given that  $u^2 = \frac{6ag}{5}$  and  $P$  moves in complete vertical circles.

When  $\theta = \beta$ , the force exerted on  $P$  by the rod is zero.

(b) Find the value of  $\cos\beta$  (6)

7. [You may assume that the volume of a cone of height  $h$  and base radius  $r$  is  $\frac{1}{3}\pi r^2 h$ .]

A uniform solid right circular cone  $C$ , with vertex  $V$ , has base radius  $r$  and height  $h$ .

- (a) Show that the centre of mass of  $C$  is  $\frac{3}{4}h$  from  $V$  (4)

A solid  $F$ , shown below in Figure 4, is formed by removing the solid right circular cone  $C'$  from  $C$ , where cone  $C'$  has height  $\frac{1}{3}h$  and vertex  $V$

Figure 4

- (b) Show that the distance of the centre of mass of  $F$  from its larger plane face is  $\frac{3}{13}h$  (5)

The solid  $F$  rests in equilibrium with its curved surface in contact with a horizontal plane.

- (c) Show that  $13r^2 \leq 17h^2$  (5)
