Candidate Number

--	--	--	--

**Monday 18 January 2021**

Morning (Time: 1 hour 30 minutes)

Paper Reference **WMA12/01**

**Mathematics**

**International Advanced Subsidiary/Advanced Level**  
**Pure Mathematics P2**

**You must have:**

Mathematical Formulae and Statistical Tables (Lilac), calculator

Total Marks

**Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.**

### Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Inexact answers should be given to three significant figures unless otherwise stated.

### Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 10 questions in this question paper. The total mark for this paper is 75.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- If you change your mind about an answer, cross it out and put your new answer and any working underneath.

3. (i) Solve

$$7^{x+2} = 3$$

giving your answer in the form  $x = \log_7 a$  where  $a$  is a rational number in its simplest form.

(3)

(ii) Using the laws of logarithms, solve

$$1 + \log_2 y + \log_2(y + 4) = \log_2(5 - y)$$

### Question 3 continued

Handwriting practice lines for the answer to Question 3.

(Total 8 marks)

Q3

4. (a) Find the first three terms, in ascending powers of  $x$ , of the binomial expansion of

$$(2 + px)^6$$

where  $p$  is a constant. Give each term in simplest form.

(4)

Given that in the expansion of

$$\left(3 - \frac{1}{2}x\right)(2 + px)^6$$

the coefficient of  $x^2$  is  $-\frac{3}{4}$

(b) find the possible values of  $p$ .

5. (i) Use algebra to prove that for all  $x \geq 0$

$$3x + 1 \geq 2\sqrt{3x}$$

(3)

(ii) Show that the following statement is not true.

“The sum of three consecutive prime numbers is always a multiple of 5”

6. (a) Show that the equation

$$\frac{3\sin\theta\cos\theta}{2\sin\theta - 1} = 5\tan\theta \quad \sin\theta \neq \frac{1}{2}$$

can be written in the form

$$3\sin^3\theta + 10\sin^2\theta - 8\sin\theta = 0 \quad (4)$$

- (b) Hence solve, for  $-\frac{\pi}{4} < x < \frac{\pi}{4}$

$$\frac{3\sin 2x \cos 2x}{2\sin 2x - 1} = 5 \tan 2x$$

giving your answers to 3 decimal places where appropriate. (4)

DO NOT WRITE IN THIS AREA

Q6

(Total 8 marks)

7.

Figure 1

Solar panels are installed on the roof of a building.

The power,  $P$ , produced on a particular day, in kW, can be modelled by the equation

$$P = 0.95 + 2^{t-12} + 2^{12-t} - (t-12)^2 \quad 8.5 \leq t \leq 15.2$$

where  $t$  is the time in hours after midnight. The graph of  $P$  against  $t$  is shown in Figure 1.

A table of values of  $t$  and  $P$  is shown below, with the values of  $P$  given to 4 significant figures where appropriate.

Time, $t$ (hours)	10	10.5	11	11.5	12
Power, $P$ (kW)		1.882	2.45		2.95

- (a) Use the given equation to complete the table, giving the values of  $P$  to 4 significant figures where appropriate.

(2)

The amount of energy, in kWh, produced between 10:00 and 12:00 can be found by calculating the area of region  $R$ , shown shaded in Figure 1.

- (b) Use the trapezium rule, with all the values of  $P$  in the completed table, to find an estimate for the amount of energy produced between 10:00 and 12:00. Give your answer to 2 decimal places.

Q7

(Total 6 marks)

Leave  
blank

8. A sequence  $a_1, a_2, a_3, \dots$  is defined by

$$a_{n+1} = 2(a_n + 3)^2 - 7$$

$$a_1 = p - 3$$

where  $p$  is a constant.

(a) Find an expression for  $a_2$  in terms of  $p$ , giving your answer in simplest form. **(1)**

Given that  $\sum_{n=1}^3 a_n = p + 15$

(b) find the possible values of  $a_2$  **(6)**

20 horizontal lines for writing.

P 6 6 3 8 8 A 0 2 3 3 2

9. A circle *C* has equation

$$(x - k)^2 + (y - 2k)^2 = k + 7$$

where *k* is a positive constant.

- (a) Write down, in terms of *k*,
  - (i) the coordinates of the centre of *C*,
  - (ii) the radius of *C*.

(2)

Given that the point *P*(2,3) lies on *C*

- (b) (i) show that  $5k^2 - 17k + 6 = 0$
- (ii) hence find the possible values of *k*.

(3)

The tangent to the circle at *P* intersects the *x*-axis at point *T*.

Given that  $k < 2$

- (c) calculate the exact area of triangle *OPT*.

(Total 10 marks)

**Q9**

**10. In this question you must show detailed reasoning.**

Owen wants to train for 12 weeks in preparation for running a marathon.

During the 12-week period he will run every Sunday and every Wednesday.

- On Sunday in week 1 he will run 15 km
- On Sunday in week 12 he will run 37 km

He considers two different 12-week training plans.

In training plan *A*, he will increase the distance he runs each Sunday by the same amount.

- (a) Calculate the distance he will run on Sunday in week 5 under training plan *A*. (3)

In training plan *B*, he will increase the distance he runs each Sunday by the same percentage.

- (b) Calculate the distance he will run on Sunday in week 5 under training plan *B*.  
Give your answer in km to one decimal place. (3)

Owen will also run a fixed distance,  $x$  km, each Wednesday over the 12-week period.

Given that

- $x$  is an integer
  - the total distance that Owen will run on Sundays and Wednesdays over the 12 weeks will not exceed 360 km
- (c) (i) find the maximum value of  $x$ , if he uses training plan *A*,  
(ii) find the maximum value of  $x$ , if he uses training plan *B*. (5)
