Thursday 18 January 2018 – Afternoon Time: 1 hour 30 minutes	Paper Reference WST01/01						
You must have: Mathematical Formulae and Statistical Tables (Blue)	Total Marks 						

Candidates may use any calculator allowed by the regulations of the Joint Council for Qualifications. Calculators must not have the facility for symbolic algebra manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.

Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Values from the statistical tables should be quoted in full. When a calculator is used, the answer should be given to an appropriate degree of accuracy.

Information

- The total mark for this paper is 75.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

1. Two classes of students, class *A* and class *B*, sat a test.

Class *A* has 10 students. Class *B* has 15 students.

Each student achieved a score, x , on the test and their scores are summarised in the table below.

	n	$\sum x$	$\sum x^2$
Class <i>A</i>	10	770	59610
Class <i>B</i>	15	t	58035

The mean score for Class *A* is 77 and the mean score for Class *B* is 61

- (a) Find the value of t (1)

- (b) Calculate the variance of the test scores for each class. (3)

The highest score on the test was 95 and the lowest score was 45

These were each scored by students from the same class.

- (c) State, with a reason, which class you believe they were from. (1)

The two classes are combined into one group of 25 students.

- (d) (i) Find the mean test score for all 25 students.
(ii) Find the variance of the test scores for all 25 students. (4)

The teacher of class *A* later realises that he added up the test scores for his class incorrectly. Each student's test score in class *A* should be increased by 3

- (e) Without further calculations, state, with a reason, the effect this will have on
- (i) the variance of the test scores for class *A*
 - (ii) the mean test score for all 25 students
 - (iii) the variance of the test scores for all 25 students. (3)

5. Franca is the manager of an accountancy firm. She is investigating the relationship between the salary, $\pounds x$, and the length of commute, y minutes, for employees at the firm. She collected this information from 9 randomly selected employees.

The salary of each employee was then coded using $w = \frac{x - 20\,000}{1000}$

The table shows the values of w and y for the 9 employees.

w	6	8	8	-1	25	15	3	-2	19
y	45	50	35	65	25	40	50	75	20

(You may use $\sum w = 81$ $\sum y = 405$ $\sum wy = 2490$ $S_{ww} = 660$ $S_{yy} = 2500$)

- (a) Calculate the salary of the employee with $w = -2$ (1)
- (b) Show that, to 3 significant figures, the value of the product moment correlation coefficient between w and y is -0.899 (3)
- (c) State, giving a reason, the value of the product moment correlation coefficient between x and y (1)

The least squares regression line of y on w is $y = 60.75 - 1.75w$

- (d) Find the equation of the least squares regression line of y on x giving your answer in the form $y = a + bx$ (3)
- (e) Estimate the length of commute for an employee with a salary of $\pounds 21\,000$ (2)

Franca uses the regression line to estimate the length of commute for employees with salaries between $\pounds 25\,000$ and $\pounds 40\,000$

- (f) State, giving a reason, whether or not these estimates are reliable. (2)
