

## Mark Scheme (Results)

Summer 2022

Pearson Edexcel International A Level in Statistics S2 (WST02/01)

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <u>www.pearson.com/uk</u>

**General Instructions for Marking** 

- 1. The total number of marks for the paper is 75.
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
  - **M** marks: method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
  - A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
  - **B** marks are unconditional accuracy marks (independent of M marks)
  - Marks should not be subdivided.
- 3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol  $\sqrt[4]{}$  will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- dep dependent
- indep independent
- dp decimal places
- sf significant figures
- **\*** The answer is printed on the paper
- The second mark is dependent on gaining the first mark
- 4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.
- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
- 6. If a candidate makes more than one attempt at any question:
  - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
  - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer

## Special notes for marking Statistics exams (for AAs only)

- If a method leads to "probabilities" which are greater than 1 or less than 0 then M0 should be awarded unless the mark scheme specifies otherwise.
- Any correct method should gain credit. If you cannot see how to apply the mark scheme but believe the method to be correct then please send to review.
- For method marks, we generally allow or condone a slip or transcription error if these are seen in an expression. We do not, however, condone or allow these errors in accuracy marks.

Question	Scheme	Marks
<b>1.</b> (a)	4	B1
		(1)
(b)	$P(X=2) = 3 \times 0.2 \times 0.8^2 \left[ = \frac{48}{125} = 0.384 \right] \text{ or } P(X=3) = 0.8^3 \left[ = \frac{64}{125} = 0.512 \right]$	M1
	[X =] 3 is the mode	A1 (2)
	$P(W_1 = 2) = \frac{e^{-4}4^2}{2} [=0.1465]$ and $P(X_1 = 2) = 3 \times 0.2 \times 0.8^2 [=\frac{48}{125} = 0.384]$	M1
	P(W <sub>1</sub> and X <sub>1</sub> = 2) = $\frac{e^{-4}4^2}{2} \times (3 \times 0.2 \times 0.8^2)$ [= 0.1465 × 0.384]	M1
	= 0.05626564 awrt <u>0.0563</u>	A1 (3)
( <b>d</b> )	$X_1 = 0$ and $W_1 > 0$ , $X_1 = 1$ and $W_1 > 1$ , $X_1 = 2$ and $W_1 > 2$ , $X_1 = 3$ and $W_1 > 3$	M1
	$0.008 \times (1 - 0.0183) + 0.096 \times (1 - 0.0916) + 0.384 \times (1 - 0.2381) + 0.512 \times (1 - 0.4335)$	M1M1
	= 0.677677 awrt <u>0.678</u>	A1 (4)
		(4) <b>[10 marks]</b>
	Notes	
(a)	B1 cao	
<b>(b)</b>	M1 valid attempt at either probability.	
	A1 3 (M1 must be scored)	
	NB answer only with no method is M0A0	
(c)	$1^{\text{st}}$ M1 both P( $W_1 = 2$ ) Allow (0.2381 – 0.0916) and P( $X_1 = 2$ )	
	$2^{nd}$ M1 Poisson probability × binomial probability. If no working shown these p	orobabilities
	must be correct	
	A1 awrt 0.0563	
( <b>d</b> )	$1^{\text{st}}$ M1 for listing at least 3 combinations. Implied by $2^{\text{nd}}$ M1.	
	2 <sup>nd</sup> M1 for sum of at least 3 correct products	
	Condone consistent use of the tables for 3.5 or 4.5 rather than 4	
	3 <sup>rd</sup> M1 for a fully correct expression	
	eg $0.008 \times (0.9817) + 0.096 \times (0.9084) + 0.384 \times (0.7619) + 0.512 \times (0.5665)$ condone 0.9816 and 0.7618 Allow figures to 3sf for method	
	or awrt $0.00785 + awrt 0.0872 + awrt 0.293 + awrt 0.290 (allow 0.29)$	
	A1 awrt 0.678	
	Alternative:	
	$W_1 = 1 \text{ and } X_1 = 0, W_1 = 2 \text{ and } X_1 < 2, W_1 = 3 \text{ and } X_1 < 3, W_1 \ge 4$	
	$0.0733 \times 0.008 + 0.1465 \times 0.104 + 0.1954 \times 0.488 + (1 - 0.4335)$	

2. (a) $E(T) = \int_{0}^{1} \frac{1}{162} t(t^{2} - 48t + 128) dt$ $= \frac{1}{192} \left[ \frac{t^{2}}{5} - 16t^{2} + 64t^{2} \right]_{0}^{1} or \left[ \frac{t^{3}}{960} - \frac{1}{12}t^{2} + \frac{1}{3}t^{2} \right]_{0}^{1} oe$ $dM1$ $= \frac{1}{192} \left[ \frac{4^{2}}{5} - 16(4^{3}) + 64(4^{2}) - 0 \right] = \frac{16}{15} \min \rightarrow 1 \min 4 \sec onds$ A1 $(3)$ (b) P(call takes between 1 and 3 minutes) = $\int_{1}^{2} \frac{1}{172} (t^{2} - 48t + 128) dt$ $mor \left[ \frac{t^{4}}{768} - \frac{1}{8}t^{2} + \frac{2}{3}t^{2} \right]_{0}^{2} oe$ M1 $= \frac{1}{162} \left[ \left( \frac{3^{4}}{4} - 24(3^{2}) + 128(3) \right) - \left( \frac{1^{4}}{4} - 24(1^{2}) + 128(1) \right) \right] = \frac{7}{16} * \frac{10}{14} \operatorname{A1^{9}cso} A^{3}$ (c) $C \sim B(256, \frac{1}{17}) \approx N(112, 63)$ M1 A1 $P(C > 125) \approx P \left[ Z > \frac{125, 5 - 112}{\sqrt{63}} \right]$ P(Z > 1.70) = 1 - 0.9554 = 0.0446 A1 $(5)$ (a) I* M1 for using $\int ff(t) dt$ ignore limits. $t^{4} \rightarrow t^{2} ort^{2} \rightarrow t^{2} ort \rightarrow t^{2}$ for at least one term, ignore coefficients. Implied by a onsever of $\frac{16}{15}$ or 1 minute 4 seconds (allow 64) or awrt 1.067 $2^{24} dM1 dep on previous M1 fully correct integration with limit of 4 and 0 or 4 substituted (204.8)$ This mark is no timplied by a correct ansever A1 the second M1 mark must be avarded 1 min 4 s (accept 64) NB an answer of $\frac{16}{15}$ or 1 minute 4 seconds or 64 or awrt 1.067 with no working gains M1M0A0. (b) integration correct allow $\frac{1}{40} \left[ \left( \frac{41}{4} - 24 + 128 \right) \right] - \left( \frac{1}{4} - 24 + 128 \right) \right] 0r \frac{192}{192} \left( \frac{753}{4} - \frac{417}{4} \right) or \frac{251}{256} - \frac{139}{256}$ $1^{4} A1^{4} \cos \frac{7}{16} \left[ -0.4375 \right] fully correct solution (correct integration and substitution). Answer is given so both method marks must be awarded. (c) I^{4} M1 use or sight of Normal approximation with mean 112 (d) I^{4} M1 use or sight of Normal approximation with mean 112 I^{4} A1 error sight of Normal approximation with mean 124 I^{4} A1 error sight of Normal approximation with mean 125 I^{4} A1 error sight of Normal approximation with mean 124 I^{4} A1 error sight of Normal approximation with mean 124 I^{4} A1 error sight of Normal approximation with mean 125 I^{4} A1 error sight of Normal a$	Question	Scheme	Marks

	$\begin{bmatrix} \frac{7}{45}x + \frac{1}{15} & 4 \\ 1 & x \dots 6 \end{bmatrix}$	(6)
	Notes	[13 marks]
(a)	1 <sup>st</sup> M1 sum of two integrals = $31/45$ (ignore limits) It may be equated to $31/45$ later working. Condone missing dx 2 <sup>nd</sup> M1 attempt at integration $x \rightarrow x^2$ or $x^2 \rightarrow x^3$ for at least one 3 <sup>rd</sup> dM1 dep on 1 <sup>st</sup> M1 being awarded for use of correct limits A1 $k = \frac{1}{60}$ cao Allow 0.016 or equivalent exact value $k = \frac{1}{60}$ with no working gains $4/4$ $k = \frac{1}{60}$ from $0.2 = 2k(8-2)$ gains M0M0M0A0	in their
(b)(i)		
(ii)	B1 $a = \frac{7}{45}$ cao allow 0.15 or equivalent exact value M1 ft "their value of $a$ " for $\frac{31}{45} + 1.5 \times$ " $a$ " or $1 - 0.5 \times$ " $a$ "	
	A1 $\frac{83}{90}$ cao Allow 0.92 or equivalent exact value	
(c)	$1^{\text{st}} B1$ a correct integration of 2nd line of pdf if have + <i>C</i> must get <i>C</i> = 0 $1^{\text{st}} M1$ a correct method to find 3rd line of cdf Condone incorrect integration (allow <i>k</i> )	
	Allow $0.2 + \int_{2}^{x} \frac{1}{60} t(8-t) dt$ or $\int \frac{1}{60} t(8-t) dt + C$ and $F(2) = 0.2$	
	2 <sup>nd</sup> M1 a correct method to find 4th line of cdf Condone incorrect integration (allow a Allow $\int_{-\infty}^{\infty} dt + C$ and $F(6) = 1$ but do <b>not</b> allow <b>their</b> $F(4) + \int_{-\infty}^{\infty} \frac{7}{45} dt$	1)
	For the next 3 marks limits condone < for " and " for < and … for >	
	2 <sup>nd</sup> B1 1 <sup>st</sup> and 5 <sup>th</sup> lines correct with correct limits. Allow 1 range to be otherwise for the	e limits,
	Must have consistent use of letter throughout for this mark 1 <sup>st</sup> A1 3 <sup>rd</sup> line correct with correct limits Allow equivalent un-simplified expressions	
	$2^{nd}$ A1 4 <sup>th</sup> line correct with correct limits Allow equivalent un-simplified expressions	

Question	Scheme	Marks	
	$Y \sim B(20, p)$ $p = P(\text{sample contains counter with a 9 on it})$		
	$p = \left(1 - \frac{9}{10} \times \frac{8}{9} \times \frac{7}{8}\right) \text{ oe or } \left(\frac{1}{10} \times \frac{9}{9} \times \frac{8}{8} \times 3\right) \text{ oe}$	M1A1	
	$\mathbf{or}\left(\frac{6}{10} \times \frac{5}{9} \times \frac{1}{8} \times 3 + \frac{6}{10} \times \frac{3}{9} \times \frac{1}{8} \times 6 + \frac{3}{10} \times \frac{2}{9} \times \frac{1}{8} \times 3\right) \text{ oe } \left[=\frac{3}{10}\right]$		
(i)	$E(Y) = 20 \times \left[\frac{3}{10}\right] = 6$	B1	
( <b>ii</b> )	$Var(Y) = 20 \times \left(\frac{3}{10}\right) \times \left(1 - \frac{3}{10}\right) = 4.2$	M1A1	
( <b>b</b> )		(5)	
(b)	(7,7,7) (7,7,8), [(7,8,7), (8,7,7)] (7,7,9), [(7,9,7), (9,7,7)]	B2

(c)	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	B1 M1 M1	
	$=\frac{2}{3} \qquad \qquad =\frac{1}{3}$	A1 A1 (5)	
	Notes	[Total 12]	
(a)	1 <sup>st</sup> M1 For all methods condone missing ×3 and /or ×6 Allow $\frac{{}^{1}C_{1} {}^{9}C_{2}}{{}^{10}C_{2}}$ oe		
	Condone with replacement - condone missing $\times 3$ and /or $\times 6$		
	$1 - \left(\frac{9}{10}\right)^3  \text{or}  \left(\frac{6}{10}\right)^2 \times \frac{1}{10} \times 3 + \frac{6}{10} \times \frac{3}{10} \times \frac{1}{10} \times 6 + \left(\frac{3}{10}\right)^2 \times \frac{1}{10} \times 3 + \dots  [=0.271]$		
	1 <sup>st</sup> A1 A fully correct expression without replacement or 0.3 NB $E(Y) = 6$ implies the 1 <sup>st</sup> M1 1 <sup>st</sup> A1		
(i)	B1 for $20 \times \text{probability} - \text{no need to calculate}$		
and (ii)	$2^{\text{nd}}$ M1 Use of $np(1-p)$ or $np\left(1-\frac{np}{20}\right)$		
	$2^{nd} A1 \text{ variance} = 4.2$		
(b)	B1B1 all 3 correct (with none incorrect – ignore arrangements of the correct numbers) (B1B0 any one correct and no incorrect <b>or</b> 2 or 3 correct and only one incorrect)These can be awarded in part (c) provided that they are clearly identified as having a median of 7 More than one incorrect is B0B0		
(c)	B1 for identifying that the only possible medians are 7 and 8. Allow 9 if it has a probability of 0		
	1 <sup>st</sup> M1 correct expression for $P(M = 7)$ Implied by 2/3 or $P(M = 8)$ Implied b	y 1/3	
	$P(M=8) = \frac{3}{10} \times \frac{2}{9} \times \frac{1}{8} + 3 \times \frac{6}{10} \times \frac{3}{9} \times \frac{2}{8} + 3 \times \frac{3}{10} \times \frac{2}{9} \times \frac{1}{8} + 6 \times \frac{6}{10} \times \frac{3}{9} \times \frac{1}{8}$		
	Condone with replacement P(M = 7) = $\left(\frac{6}{10}\right)^3 + 3 \times \left(\frac{6}{10}\right)^2 \times \frac{3}{10} + 3 \times \left(\frac{6}{10}\right)^2 \times \frac{1}{10} = 1$	]	
	$P(M=8) = \left(\frac{3}{10}\right)^3 + 3 \times \frac{6}{10} \times \left(\frac{3}{10}\right)^2 + 3 \times \left(\frac{3}{10}\right)^2 \times \frac{1}{10} + 6 \times \frac{6}{10} \times \frac{3}{10} \times \frac{1}{10} \left[ = \frac{81}{250} = 0.32 \right]$	_	
	2 <sup>nd</sup> M1 Total of the 2 probabilities for 7 and 8 =1 or a correct expression with for both $P(M = 7)$ and $P(M = 8)$ condone with replacement	nout replacement	
	$1^{\text{st}} \text{A1 } P(M=7) = \frac{2}{3} \text{ oe } 2^{\text{nd}} \text{A1 } P(M=8) = \frac{1}{3} \text{ oe}$
