Mark Scheme for Autumn 2021

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

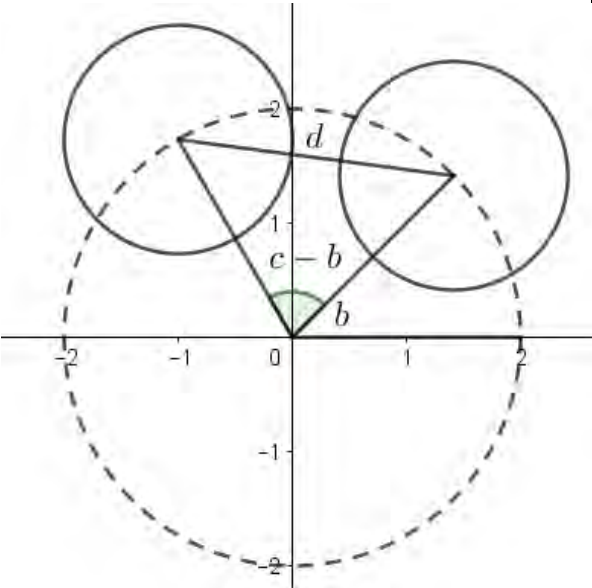

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

Annotations and abbreviations

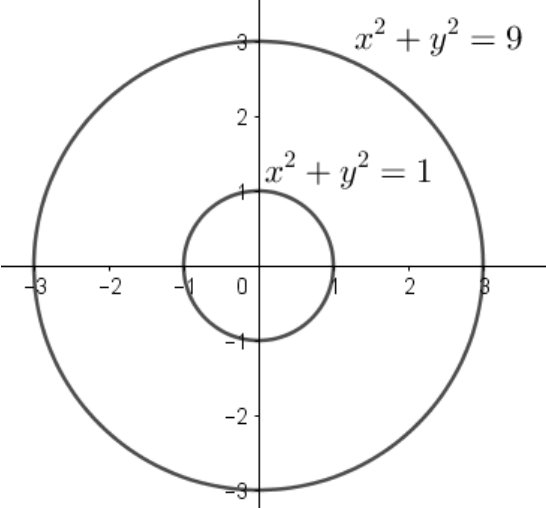

Annotation in scoris	Meaning
✓ and ✖	
BOD	Benefit of doubt
FT	Follow through
ISW	Ignore subsequent working
M0, M1	Method mark awarded 0, 1
A0, A1	Accuracy mark awarded 0, 1
B0, B1	Independent mark awarded 0, 1
E	Explanation mark 1
SC	Special case
^	Omission sign
MR	Misread
BP	Blank page
Highlighting	
Other abbreviations in mark scheme	Meaning
E1	Mark for explaining a result or establishing a given result
dep*	Mark dependent on a previous mark, indicated by *. The * may be omitted if only previous M mark.
cao	Correct answer only
oe	Or equivalent
rot	Rounded or truncated
soi	Seen or implied
www	Without wrong working
AG	Answer given
awrt	Anything which rounds to
BC	By Calculator
DR	This indicates that the instruction In this question you must show detailed reasoning appears in the question.

Question	Answer	Marks	AOs	Guidance
1 (a)	$x^2 + y^2 = 4$	B1 [1]	1.2	
1 (b)	<p>Let d be the distance concerned. Then d is as in the diagram below.</p>  <p>By reference to a diagram using the cosine rule</p> $d^2 = 2^2 + 2^2 - 2 \times 2 \times 2 \cos(c - b)$ $= 8(1 - \cos(c - b))$ <p>Therefore $d = 2\sqrt{2}\sqrt{1 - \cos(c - b)}$.</p>	<p>M1</p> <p>A1</p> <p>[2]</p>	<p>2.1</p> <p>1.1</p>	<p>Diagram not necessary.</p> <p>Alternatives here include $d^2 = (2\cos(c) - 2\cos(b))^2 + (2\sin(c) - 2\sin(b))^2$</p>

Y436/01

Mark Scheme

Question		Answer	Marks	AOs	Guidance
	(e)	$x^2 + y^2 = 1$ $x^2 + y^2 = 9$	B1 B1 [2]	1.2 1.2	
2	(a)	Gradient of the line through $(0, a)$ and $(1, a^2)$ is $\frac{a^2 - a}{1 - 0} = a(1 - a) .$ The line crosses the y – axis at $(0, a)$ so the equation of the line is $y = a(a - 1)x + a$	M1 A1 [2]	1.1a 1.1b	
	(b)	The two straight lines are $y = b(b - 1)x + b$ and $y = c(c - 1)x + c$. These are parallel if $b(b - 1) = c(c - 1)$ $\Rightarrow 0 = c^2 - b^2 + b - c$ $\Rightarrow 0 = (c - b)(c + b) - (c - b)$ $\Rightarrow 0 = (c - b)(c + b - 1)$ $\Rightarrow 0 = c + b - 1$ (since $c \neq b$) $\Rightarrow c + b = 1$	M1 M1 A1 [3]	3.1a 2.4 2.1	Note that equation can be solved using CAS which is an acceptable method.

Question	Answer	Marks	AOs	Guidance
(c)		<p>B1</p> <p>B1</p> <p>[2]</p>	<p>1.1b</p> <p>1.1b</p>	<p>One mark for each branch of the curve, check for shape, asymptotes, max/min and quadrants and points on the axes. Note that question requires 'sketch'.</p>

Question	Answer	Marks	AOs		Guidance
(d)	<p>Let $f(x, y, a) = a(a-1)x - y + a$.</p> <p>The envelope is the set of points for which, simultaneously $f(x, y, a) = 0$ and</p> $\frac{\partial f}{\partial a}(x, y, a) = 0, \text{ for some value of } a.$ <p>$f(x, y, a) = a^2x - ax - y + a$</p> $\Rightarrow \frac{\partial f}{\partial a} = 2ax - x + 1$ <p>$\frac{\partial f}{\partial a}(x, y, a) = 0$ implies that $a = \frac{x-1}{2x}$ (note x not zero),</p> <p>If, in addition, $f(x, y, a) = 0$ then</p> $0 = \left(\frac{x-1}{2x}\right)\left(\frac{x-1}{2x} - 1\right)x - y + \frac{x-1}{2x}$ $\Rightarrow y = \frac{x-1}{2x}\left(\frac{-1-x}{2} + 1\right) \text{ oe isw}$	<p>M1</p> <p>M1</p> <p>M1</p> <p>M1</p> <p>A1</p> <p>[5]</p>	<p>3.1a</p> <p>1.1</p> <p>1.1</p> <p>2.2a</p> <p>2.1</p>	<p>This is awarded for any correct expression with y in terms of x explicitly.</p> <p>Might also see $y = -\frac{(x-1)^2}{4x}$ or $y = \left(\frac{x-1}{2x}\right)\left(\frac{1-x}{2}\right)$ for example.</p>	

Y436/01

Mark Scheme

October 2021

3	(a)	(i)	<p>Appropriate structure program</p> <p>Loop with correct range dependent on m, n. Check for common divisors with if statement and tracking greatest one found.</p> <p>Fully correct program.</p>	<p>M1</p> <p>M1</p> <p>A1 [3]</p>	<p>3.3</p> <p>2.1</p> <p>2.5</p>	<p>Pseudo code accepted, condone lack of syntax, give reasonable BOD on possible transcription errors</p> <p>Example code for Python</p> <pre>def hcf(m,n): k = min(m,n) hcf=1 for i in range(1,k+1): if m%i==0 and n%i==0: hcf=i return hcf print(hcf(m,n))</pre>	
		(ii)	$(74333, 89817) = 49$	<p>B1 [1]</p>	1.1	Set $m = 74333$ and $n = 89817$ in the above.	

Y436/01

Mark Scheme

October 2021

	(b)	(i)	<p>Appropriate structure program</p> <p>Loop with correct range and counts number of values coprime to k.</p> <p>Fully correct programme</p>	<p>M1</p> <p>M1</p> <p>A1</p> <p>[3]</p>	<p>3.3</p> <p>2.1</p> <p>2.5</p>	<p>Pseudo code accepted, condone lack of syntax, give reasonable BOD on possible transcription errors</p> <p>Example code for Python with hcf function as in 2(i) above.</p> <pre>def phi(k): count = 0 for i in range(1,k): if hcf(i,k)==1: count = count + 1 return count print(phi(k))</pre>	
		(ii)	$\varphi(128) = 64$ and $\varphi(1000) = 400$	<p>B1</p> <p>B1</p> <p>[2]</p>	<p>1.1</p> <p>1.1</p>		
		(iii)	$\varphi(2^n) = 2^{n-1}$. This is because all the odd numbers less than 2^n are coprime to 2^n and all the even numbers less than 2^n are not. There are 2^{n-1} such odd numbers.	<p>M1</p> <p>A1</p> <p>[2]</p>	<p>2.1</p> <p>3.2a</p>	<p>Spotting odd/even property.</p> <p>Correct value in terms of n.</p>	
		(iv)	$\varphi(10^n) = 4 \times 10^{n-1}$. All numbers less than 10^n with final digit 1, 3, 7 and 9 are coprime to 10^n , any other number is not. There are four such numbers in 1, 2, ..., 10, four in 11, 12, ..., 20, four in 21, 22, ..., 30, and so on. There are 10^{n-1} such groups before reaching 10^n . So there are $4 \times 10^{n-1}$ number less than 10^n which are coprime to 10^n .	<p>M1</p> <p>M1</p> <p>A1</p> <p>[3]</p>	<p>2.1</p> <p>2.2a</p> <p>3.2a</p>	<p>Spotting end digit property.</p> <p>Applying it across all numbers less than 10^n.</p> <p>Correct value in terms of n.</p>
