Monday 4 October 2021 – Afternoon

A Level Further Mathematics B (MEI)

Y420/01 Core Pure

Time allowed: 2 hours 40 minutes

You must have:
- the Printed Answer Booklet
- the Formulae Booklet for Further Mathematics B (MEI)
- a scientific or graphical calculator

INSTRUCTIONS
- Use black ink. You can use an HB pencil, but only for graphs and diagrams.
- Write your answer to each question in the space provided in the **Printed Answer Booklet**. If you need extra space use the lined pages at the end of the Printed Answer Booklet. The question numbers must be clearly shown.
- Fill in the boxes on the front of the Printed Answer Booklet.
- Answer **all** the questions.
- Where appropriate, your answer should be supported with working. Marks might be given for using a correct method, even if your answer is wrong.
- Give your final answers to a degree of accuracy that is appropriate to the context.
- Do **not** send this Question Paper for marking. Keep it in the centre or recycle it.

INFORMATION
- The total mark for this paper is **144**.
- The marks for each question are shown in brackets **[ ]**.
- This document has **8** pages.

ADVICE
- Read each question carefully before you start your answer.

2

Section A (31 marks)

Answer **all** the questions.

1 **(a)** Express $\dfrac{1}{(2r-1)(2r+1)}$ in partial fractions. **[3]**

  (b) Hence find $\displaystyle\sum_{r=1}^{n}\dfrac{1}{(2r-1)(2r+1)}$, expressing the result as a single fraction. **[4]**

2 **In this question you must show detailed reasoning.**

Find the gradient of the curve $y=6\arcsin(2x)$ at the point with x-coordinate $\frac{1}{4}$. Express the result in the form $m\sqrt{n}$, where m and n are integers. **[4]**

3 **In this question you must show detailed reasoning.**

The complex numbers z_1 and z_2 are given by $z_1=-2+2\mathrm{i}$ and $z_2=2\left(\cos\frac{1}{6}\pi+\mathrm{i}\sin\frac{1}{6}\pi\right)$.

  (a) Find the modulus and argument of z_1. **[2]**

  (b) Hence express $\dfrac{z_1}{z_2}$ in exact modulus-argument form. **[4]**

4 **In this question you must show detailed reasoning.**

Determine the mean value of $\dfrac{1}{1+4x^2}$ between $x=-1$ and $x=1$. Give your answer to **3** significant figures. **[4]**

5 **(a)** Use a Maclaurin series to find a quadratic approximation for $\ln(1+2x)$. **[1]**

  (b) Find the percentage error in using the approximation in part **(a)** to calculate $\ln(1.2)$. **[3]**

  (c) Jane uses the Maclaurin series in part **(a)** to try to calculate an approximation for $\ln 3$.

  Explain whether her method is valid. **[2]**

6 Given that $y=mx$ is an invariant line of the transformation with matrix $\begin{pmatrix} 1 & 2 \\ 2 & -2 \end{pmatrix}$, determine the possible values of m. **[4]**

3

Section B (113 marks)

Answer **all** the questions.

7   Prove that $\displaystyle\sum_{r=1}^{n} \frac{r}{2^{r-1}} = 4 - \frac{n+2}{2^{n-1}}$ for all $n \geqslant 1$. **[6]**

8   The equation $4x^4 - 4x^3 + px^2 + qx - 9 = 0$, where p and q are constants, has roots α, $-\alpha$, β and $\dfrac{1}{\beta}$.

   (a) Determine the exact roots of the equation. **[5]**

   (b) Determine the values of p and q. **[4]**

9   The transformation T of the plane has associated matrix **M**, where $\mathbf{M} = \begin{pmatrix} -1 & 0 \\ -2 & 1 \end{pmatrix}$.

   (a) On the grid in the Printed Answer Booklet, plot the image OA′B′C′ of the unit square OABC under the transformation T. **[2]**

   (b) (i) Calculate the value of $\det\mathbf{M}$. **[1]**

   (ii) Explain the significance of the value of $\det\mathbf{M}$ in relation to the image OA′B′C′. **[2]**

   (c) T is equivalent to a sequence of two transformations of the plane.

   (i) Specify fully **two** transformations equivalent to T. **[3]**

   (ii) Use matrices to verify your answer. **[3]**

10 **(a)** Show on an Argand diagram the points representing the three cube roots of unity. **[2]**

   (b) (i) Find the exact roots of the equation $z^3 - 1 = \sqrt{3}\,i$, expressing them in the form $re^{i\theta}$, where $r > 0$ and $-\pi < \theta < \pi$. **[5]**

   (ii) The points representing the cube roots of unity form a triangle Δ_1. The points representing the roots of the equation $z^3 - 1 = \sqrt{3}\,i$ form a triangle Δ_2.

   State a sequence of two transformations that maps Δ_1 onto Δ_2. **[2]**

   (iii) The three roots in part **(b)(i)** are z_1, z_2 and z_3.

   By simplifying $z_1 + z_2 + z_3$, verify that the sum of these roots is zero. **[2]**

   (iv) Hence show that $\sin 20° + \sin 140° = \sin 100°$. **[2]**

11 **(a)** Given that $\mathbf{u} = \lambda\mathbf{i} + \mathbf{j} - 3\mathbf{k}$ and $\mathbf{v} = \mathbf{i} + 2\mathbf{j} - 2\mathbf{k}$, find the following, giving your answers in terms of λ.

    (i) $\mathbf{u.v}$ **[1]**

    (ii) $\mathbf{u} \times \mathbf{v}$ **[2]**

  (b) Hence determine

    (i) the acute angle between the planes $2x + y - 3z = 10$ and $x + 2y - 2z = 10$,   **[3]**

    (ii) the shortest distance between the lines $\dfrac{x-3}{3} = \dfrac{y}{1} = \dfrac{z-2}{-3}$ and $\dfrac{x}{1} = \dfrac{y-4}{2} = \dfrac{z+2}{-2}$, giving your answer as a multiple of $\sqrt{2}$.   **[3]**

12 **Fig. 12** shows a rhombus OACB in an Argand diagram. The points A and B represent the complex numbers z and w respectively.

Fig. 12

Prove that $\arg(z + w) = \frac{1}{2}(\arg z + \arg w)$.

[A copy of **Fig. 12** is provided in the Printed Answer Booklet.]   **[4]**

13 Find the general solution of the differential equation $\dfrac{d^2y}{dx^2} + 2\dfrac{dy}{dx} - 3y = 2e^x$.   **[7]**

14 A curve has polar equation $r = a(\cos\theta + 2\sin\theta)$, where a is a positive constant and $0 \leqslant \theta \leqslant \pi$.

   (a) Determine the polar coordinates of the point on the curve which is furthest from the pole. **[7]**

   (b) (i) Show that the curve is a circle whose radius should be specified. **[6]**

      (ii) Write down the polar coordinates of the centre of the circle. **[1]**

15 The equations of three planes are

$$-4x + ky + 7z = 4,$$
$$x - 2y + 5z = l,$$
$$2x + 3y + z = 2.$$

Given that the planes form a sheaf, determine the values of k and l. **[6]**

16 **(a)** Show using exponentials that $\cosh 2u = 1 + 2\sinh^2 u$. **[4]**

   (b) Show that $\displaystyle\int_0^2 \frac{x^2}{\sqrt{4+x^2}}\, dx = 2\sqrt{2} - 2\ln(1 + \sqrt{2})$. **[10]**

17 In a chemical process, a vessel contains 1 litre of pure water. A liquid chemical is then passed into the top of the vessel at a constant rate of a litres per minute and thoroughly mixed with the water. At the same time, the resulting mixture is drawn from the bottom of the vessel at a constant rate of b litres per minute. You may assume that the chemical mixes instantly and uniformly with the water. After t minutes, the mixture in the vessel contains x litres of the chemical.

   (a) (i) Show that the proportion of chemical present in the vessel after t minutes is
$$\frac{x}{1 + (a-b)t}.$$ **[2]**

      (ii) Hence show that $\dfrac{dx}{dt} + \dfrac{bx}{1 + (a-b)t} = a$. **[2]**

   (b) First, consider the case where $b = a$.

      (i) Solve the differential equation to find x in terms of a and t. **[4]**

      (ii) Given that after 1 minute the vessel contains equal amounts of water and chemical, find the rate of inflow of chemical. **[2]**

   (c) Now consider the case where $b = 2a$.

      (i) Explain why the differential equation in part **(a)(ii)** is now invalid for $t \geqslant \dfrac{1}{a}$. **[1]**

      (ii) Find the maximum amount of chemical in the vessel. **[9]**
