

1.

The equation of a curve is $y = \cos 2x + 2 \sin x$. Find $\frac{dy}{dx}$ and hence find the coordinates of the stationary points on the curve for $0 < x < \pi$.

[6]

2. In this question you must show detailed reasoning.

Find the gradient of the curve $y = 3 \cos 2x$ at the point where $x = \frac{1}{8}\pi$.

1	<p>Use of</p> <p>$\sin 2x = +/- 2 \sin x \cos x$ or</p> $\cos\left(\frac{\pi}{2} - 2x\right)$ <p>+/-</p> <p>or $\cos 2x = +/- 2\cos^2 x +/- 1$ etc</p> <p>$\left(\frac{dy}{dx} =\right) -2 \sin 2x$ (or $-4\sin x \cos x$); $+ 2 \cos x$</p> <p>their $\frac{dy}{dx} = 0$</p> <p>$\left(\frac{\pi}{2}, 1\right)$; $\left(\frac{\pi}{6}, \frac{3}{2}\right)$ and $\left(\frac{5\pi}{6}, \frac{3}{2}\right)$</p>	<p>M1</p> <p>B1, B1</p> <p>*M1</p> <p>dep* A1; A1</p>	<p>Seen anywhere in the solution</p> <p>-1 (once) for using degrees in an answer instead of radians.</p> <p>If B0 & / or B0 <u>because of sign error</u>, allow A1 to be awarded for $\left(\frac{\pi}{2}, 1\right)$</p> <p>Examiner's Comments</p> <p>This relatively simple-looking question did test a number of useful features: the differentiation of $\cos 2x$, the solution of $\sin 2x = \cos x$ and, finally, the solution of $\sin x = \frac{1}{2}$ for $0 < x < \pi$. The majority of candidates passed the first test but failed the second and third. Most divided each side of the equation by $\cos x$ without considering the possibility of $\cos x$ being 0 and a similar number forgot that $\frac{5\pi}{6}$ was also a solution of the equation $\sin x = \frac{1}{2}$</p> <p>Although the $\sin 2x$ formula was generally used correctly at the end of the first main stage, it was surprising how many decided to use the double-angle formula for $\cos 2x$ at the beginning; unfortunately the derivative of $\cos^2 x$</p>	<p>SC If A0 but all 3 x-values are correct, award SC A1</p> <p>SC B2 for 3 ✓ answers without working</p>

				often proved more problematic than that of $\cos 2x$.
